

# API Commands

*For resellers of  
domain names  
and related  
services*

***Version 2.0***

*May 17, 2005*

eNom, Incorporated ("eNom" or "eNom.com"), at its sole discretion, may change the terms, conditions and operation of its application programming interface and related documents (the "API") at any time. Access to and use of the API is by license only. By using the API and documentation, you agree to the terms of this license (following).

eNom hereby grants you a non-exclusive, non-transferable, royalty-free license, exercisable solely during the term of this license, to use the API solely for the purpose of accessing and using the services provided by eNom and, unless otherwise specified in writing, solely for your personal, non-commercial use.

Except for the rights expressly granted above, this license does not transfer from eNom to you any eNom® technology, and all rights, titles and interests in and to any eNom technology and the API shall remain solely with eNom.

You shall not prepare any derivatives of the API or otherwise branch the API. It is understood that a derivative or "branch" of the API would be a new version of the API, with changed or additional functions (an application you build which includes unmodified API commands is not a derivative or branch of the API).

You shall not create, apply for, or otherwise procure any patent or copyright interest in the API and any derivative ("IP Interest") thereof which IP Interest would block, impede, or make more expensive eNom's continued use and enjoyment of the API. You agree that if you breach the provisions of this section, that any IP Interests created thereby shall be assigned to eNom as a "work for hire" as this expression is defined in U.S. copyright law and/or that you will provide, at no cost to eNom, a royalty free license to use such IP Interests as required for eNom's continued use and enjoyment of the API.

You shall not copy or use the API except as specified in this license or as otherwise specified by eNom in writing.

You shall not use the API to communicate with or to control a system other than system(s) designated by eNom and you may not access or use eNom's services using any access mechanism other than the API.

WE AND OUR ADVERTISERS, SUPPLIERS AND LICENSORS PROVIDE OUR PRODUCTS AND SERVICES "AS IS" AND WITHOUT ANY WARRANTY OR CONDITION, EXPRESS OR IMPLIED. WE AND OUR ADVERTISERS, SUPPLIERS AND LICENSORS SPECIFICALLY DISCLAIM ANY IMPLIED WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND WARRANTY OF NON-INFRINGEMENT. SOME STATES DO NOT ALLOW THE DISCLAIMER OF IMPLIED WARRANTIES, SO THE FOREGOING DISCLAIMER MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS AND YOU MAY ALSO HAVE OTHER LEGAL RIGHTS WHICH VARY FROM STATE TO STATE. WITHOUT LIMITING THE FOREGOING, ENOM.COM SHALL NOT BE LIABLE TO YOU OR YOUR BUSINESS FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL, OR PUNITIVE DAMAGES OR LOST OR IMPUTED PROFITS OR ROYALTIES ARISING OUT OF THE USE OF THE API AND THIS DOCUMENT OR ANY GOODS OR SERVICES PROVIDED, WHETHER FOR BREACH OF WARRANTY OR ANY OBLIGATION ARISING THEREFROM OR OTHERWISE, WHETHER LIABILITY IS ASSERTED IN CONTRACT OR TORT (INCLUDING NEGLIGENCE AND STRICT PRODUCT LIABILITY) AND IRRESPECTIVE OF WHETHER YOU HAVE BEEN ADVISED OF THE POSSIBILITY OF ANY SUCH LOSS OR DAMAGE. EACH PARTY HEREBY WAIVES ANY CLAIMS THAT THESE EXCLUSIONS DEPRIVE SUCH PARTY OF AN ADEQUATE REMEDY.

"eNom" is a trademark or registered trademark of eNom, Inc. and may not be used without permission. Other product and company names mentioned in the API or this document may be the property of their respective owners.

Parties who develop objects using the API are hereby granted a trademark license to use "eNom" in connection with such objects as described below. This license is contingent on your adherence to the following rules and, regardless of your compliance with these rules, may be revoked at any time at eNom's sole discretion:

\_\_\_\_\_ eNom® \_\_\_\_\_ OBJECTS\*

- Where the first blank is mandatory and must be filled in with an expression composed of two or more letters, numbers, or symbols chosen by you. This expression can be a name or a trademark, provided you have permission or do not need permission to use it. This expression may not imply ownership of, affiliation with, or endorsement by eNom (which precludes words such as "Authentic" or "Exclusive"). This expression may not use single letters and may not contain profanity. It is preferred that the term used in this first blank be in the possessive form (see examples), but this is optional.

- Where the second blank line is optional and may filled in with an expression composed of one or more letters, numbers, or symbols chosen by the developer. All the restrictions described for the first blank apply to this blank, except that you may use one letter in this blank.
- Where the "\*" (or equivalent symbol) must be associated with a disclaimer, placed in reasonable proximity, which says, "Not affiliated with or endorsed by eNom, Incorporated."
- Where the (R) must either be represented exactly as is or where you use the superscript ® symbol denoting a registered trademark.
- Where capitalization of "eNom" is as indicated and capitalization of other characters is at your option.
- Where you agree to indemnify and hold eNom harmless, including attorney's fees and court costs, for any third party claim alleging that the expression(s) you use to complete the blank field(s) infringe any intellectual property rights or cause any other harm to such third party claimant.

EXAMPLES:    FRED'S .NET eNom® OBJECTS\*  
                   GREG'S eNom® PHP OBJECTS\*  
                   ACME™ eNom® OBJECTS\*

# *API command categories*

The following pages list the categories of commands in the API, and give you an overview of the commands that are available to you for each major type of task. Click on any command name to jump to its full description in the catalog.

## **Domain registration commands**

- [AddBulkDomains](#)
- [Check](#)
- [GetConfirmationSettings](#)
- [GetExtAttributes](#)
- [GetTLDList](#)
- [Preconfigure](#)
- [Purchase](#)

## **Domain management commands—general**

- [GetAllDomains](#)
- [GetDomainCount](#)
- [GetDomainExp](#)
- [GetDomainInfo](#)
- [GetDomainNameID](#)
- [GetDomains](#)
- [GetDomainSLDTLD](#)
- [GetDomainStatus](#)
- [GetExpiredDomains](#)
- [GetExtendInfo](#)
- [GetPasswordBit](#)
- [GetRegistrationStatus](#)
- [GetRegLock](#)
- [GetRenew](#)
- [GetSubAccountPassword](#)
- [ParseDomain](#)
- [RPT\\_GetReport](#)
- [SetPassword](#)
- [SetRegLock](#)
- [SetRenew](#)
- [StatusDomain](#)
- [ValidatePassword](#)

## Domain management commands—contact information

[Contacts](#)  
[GetContacts](#)  
[GetExtAttributes](#)  
[GetWPPSInfo](#)  
[GetWhoisContact](#)

## Domain management commands—host records

[GetHosts](#)  
[GetMetaTag](#)  
[GetRegHosts](#)  
[GetSPFHosts](#)  
[SetHosts](#)  
[SetSPFHosts](#)  
[UpdateMetaTag](#)

## Domain management commands—name servers

[CheckNSStatus](#)  
[DeleteNameServer](#)  
[GetDNS](#)  
[GetDNSStatus](#)  
[ModifyNS](#)  
[ModifyNSHosting](#)  
[RegisterNameServer](#)  
[SetDNSHost](#)  
[UpdateNameServer](#)

## Domain management commands—domain services

[DisableServices](#)  
[EnableServices](#)  
[GetDomainMap](#)  
[GetDomainPhone](#)  
[GetDomainServices](#)  
[GetWPPSInfo](#)  
[GetIPResolver](#)  
[PurchaseServices](#)  
[ServiceSelect](#)  
[SetDomainMap](#)  
[SetDomainPhone](#)  
[SetIPResolver](#)

## Domain management commands—e-mail services

[DeleteAllPOPPaks](#)  
[DeletePOP3](#)  
[DeletePOPPak](#)  
[Forwarding](#)  
[GetDotNameForwarding](#)  
[GetForwarding](#)  
[GetMailHosts](#)  
[GetPOP3](#)  
[GetPOPExpirations](#)  
[GetPOPForwarding](#)  
[ModifyPOP3](#)  
[PurchasePOPBundle](#)  
[RenewPOPBundle](#)  
[SetDotNameForwarding](#)  
[SetPakRenew](#)  
[SetPOPForwarding](#)  
[SetUpPOP3User](#)

## Domain management commands—parking

[GetParkingText](#)  
[SetParkingText](#)

## Domain management commands—traffic

[TRAFFIC\\_GetAccountDetails](#)  
[TRAFFIC\\_GetAccounts](#)  
[TRAFFIC\\_GetDefaultConfig](#)  
[TRAFFIC\\_GetRedirectedDomains](#)  
[TRAFFIC\\_SetAllRedirectedDomains](#)  
[TRAFFIC\\_SetRedirectedDomains](#)  
[TRAFFIC\\_UpdateAccountDetails](#)

## Domain renewal commands

[Extend](#)  
[GetDomainExp](#)  
[GetExtendInfo](#)  
[GetRenew](#)  
[InsertNewOrder](#)  
[SetRenew](#)  
[UpdateExpiredDomains](#)

## Domain transfer commands

[PushDomain](#)  
[TP\\_CancelOrder](#)  
[TP\\_CreateOrder](#)  
[TP\\_GetDetailsByDomain](#)  
[TP\\_GetOrder](#)  
[TP\\_GetOrderDetail](#)  
[TP\\_GetOrderReview](#)  
[TP\\_GetOrdersByDomain](#)  
[TP\\_GetOrderStatuses](#)

[TP\\_GetTLDInfo](#)  
[TP\\_ResendEmail](#)  
[TP\\_ResubmitLocked](#)  
[TP\\_SubmitOrder](#)  
[TP\\_UpdateOrderDetail](#)  
[UpdatePushList](#)

## Account commands

[AddContact](#)  
[AuthorizeTLD](#)  
[CheckLogin](#)  
[CreateAccount](#)  
[CreateSubAccount](#)  
[DeleteContact](#)  
[DeleteSubaccount](#)  
[GetAccountInfo](#)  
[GetAccountPassword](#)  
[GetAccountValidation](#)  
[GetAddressBook](#)  
[GetAllAccountInfo](#)  
[GetCusPreferences](#)  
[GetCustomerPaymentInfo](#)  
[GetGlobalChangeStatus](#)  
[GetGlobalChangeStatusDetail](#)  
[GetOrderDetail](#)  
[GetOrderList](#)  
[GetReport](#)  
[GetResellerInfo](#)  
[GetSubAccountDetails](#)  
[GetServiceContact](#)  
[GetSubAccounts](#)  
[GetSubaccountsDetailList](#)  
[GetTLDList](#)  
[GetTransHistory](#)  
[GetWebHostingAll](#)  
[MakeResellerAccount](#)  
[RemoveTLD](#)  
[RPT\\_GetReport](#)  
[SubAccountDomains](#)  
[UpdateAccountInfo](#)  
[UpdateCusPreferences](#)

## Accounting commands

[CommissionAccount](#)  
[GetBalance](#)  
[PE\\_GetCustomerPricing](#)  
[PE\\_GetDomainPricing](#)  
[PE\\_GetPOPPrice](#)  
[PE\\_GetProductPrice](#)  
[PE\\_GetResellerPrice](#)  
[PE\\_GetRetailPrice](#)  
[PE\\_GetRetailPricing](#)  
[PE\\_GetRocketPrice](#)

[PE\\_GetTLDID](#)  
[PE\\_SetPricing](#)  
[RefillAccount](#)  
[SetResellerServicesPricing](#)  
[SetResellerTLDPricing](#)  
[UpdateAccountPricing](#)

## DNS hosting commands

[DeleteHostedDomain](#)  
[ExtendDomainDNS](#)  
[PurchaseHosting](#)  
[SetDNSHost](#)

## Shopping cart commands

[AddBulkDomains](#)  
[AddToCart](#)  
[DeleteFromCart](#)  
[GetCartContent](#)  
[InsertNewOrder](#)  
[PurchasePreview](#)  
[UpdateCart](#)

## Preregistration commands

[PreRegAddList](#)

## Reporting commands

[DeleteCustomerDefinedData](#)  
[GetCustomerDefinedData](#)  
[GetOrderDetail](#)  
[GetOrderList](#)  
[GetReport](#)  
[GetTLDList](#)  
[GetTransHistory](#)  
[RPT\\_GetReport](#)  
[SetCustomerDefinedData](#)

## Customer support commands

[DeleteCustomerDefinedData](#)  
[GetCustomerDefinedData](#)  
[GetServiceContact](#)  
[SetCustomerDefinedData](#)

# *API commands*

This chapter is an alphabetic catalog of the commands in the API. The documentation for each command includes a description, input and return parameters, and an example query and response.

The responses for many commands differ slightly depending on whether you request XML, HTML, or text output. For example, return parameters may be numbered for HTML and text, but not in XML responses. It's important to test each command and write your code based on the actual response format.

Our API requires that queries be URL encoded.

# AddBulkDomains

## Description

### Definition

Add a list of items to the shopping cart.

### Usage

Use this command when you want to add multiple items to the shopping cart.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ListRegister.asp>

On the **Batch register** page, the **add to cart** button calls the **AddBulkDomains** command.

## Constraints

The domain names in your list must meet the following requirements:

- The domain names must be valid (see the domain-name constraints under [Check](#)).
- The domain names must use a supported top-level domain.
- The number of SLDs must match the number of TLDs.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=addbulkdomains&uid=YourAccountID&pw=YourAccountPassword&producttype=register&listcount=NumberDomainsToAdd&sld1=FirstSLD&tld1=FirstTLD&sld2=SecondSLD&tld2=SecondTLD&sld3=thirdSLD&tld3=ThirdTLD&responsetype=xml`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ProductType</b>	Required	Type of product to add. Options are <b>register</b> or <b>renew</b> .	16
<b>listcount</b>	Required	Number of names to add	4
<b>SLDX</b> (X=1 to listcount)	Required	Second-level domain name, for example, <b>resellerdocs</b> in resellerdocs.com	63
<b>TLDX</b> (X=1 to listcount)	Required	Top-level domain name, for example, <b>com</b> in resellerdocs.com	15
<b>numyearsX</b> (X=1 to listcount)	Optional	Number of years to renew	1

Param name	Obligation	Definition	Max size
<b>AutoRenew</b>	Optional	Auto-renew setting for all domains in this order. If <b>AutoRenew=1</b> , domains automatically update 30 days before expiration. If not passed, default value is <b>0</b> .	1
<b>RegLock</b>	Optional	Registrar lock setting for all domains in this order. If <b>RegLock=1</b> , domain cannot be transferred to another registrar without account holder's permission. If not passed, default value is <b>1</b> .	1
<b>UseCart</b>	<b>UseCart=1</b> is <b>Required</b> if UID is a retail account, otherwise Optional.	Use the shopping cart for this order. Permitted values are <b>0</b> and <b>1</b> . <b>UseCart=1</b> is required if UID is a retail account.	1

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds **resellerdocs.com**, **resellerdocs2.net**, and **resellerdocs3.info** to the shopping cart of account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=addbulkdomains&
uid=resellid&pw=resellpw&producttype=register&listcount=3&
sld1=resellerdocs&tld1=com&sld2=resellerdocs2&tld2=net&
sld3=resellerdocs3&tld3=info&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <AddBulkDomains>
    <Item>
      <ItemName>resellerdocs.com</ItemName>
      <ItemId />
      <Price>29.95</Price>
      <ItemAdded>True</ItemAdded>
    </Item>
    <Item>
      <ItemName>resellerdocs2.net</ItemName>
```

```
<ItemId />
<Price>29.95</Price>
<ItemAdded>True</ItemAdded>
</Item>
<Item>
  <ItemName>resellerdocs3.info</ItemName>
  <ItemId />
  <Price>29.95</Price>
  <ItemAdded>True</ItemAdded>
</Item>
<AllItemsSuccessful>True</AllItemsSuccessful>
</AddBulkDomains>
<Command>ADDBULKDOMAINS</Command>
<ErrCount>0</ErrCount>
<Server>ResellerTest</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

## Related commands

[AddToCart](#)  
[Check](#)  
[DeleteFromCart](#)  
[GetCartContent](#)  
[InsertNewOrder](#)  
[Purchase](#)  
[PurchasePreview](#)  
[UpdateCart](#)

---

# AddContact

---

## Description

### Definition

Add a contact to the address book for an account.

### Usage

Use this command to add a contact to the address book for an account.

To retrieve the contacts in an address book, use the [GetAddressBook](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>RegistrantOrganizationName</b>	Optional	Registrant organization	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantFirstName</b>	Required	Registrant first name	60
<b>RegistrantLastName</b>	Required	Registrant last name	60
<b>RegistrantAddress1</b>	Required	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required	Registrant city	60
<b>RegistrantPostalCode</b>	Required	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>RegistrantCountry</b>	Optional	Registrant country	60

Param name	Obligation	Definition	Max size
<b>RegistrantPhone</b>	<b>Required</b>	Registrant phone number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	<b>Required</b>	Email address for WhoIs	128
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>PartyID</b>	Party ID number for this contact, assigned by us
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds a party to the address book for account **resellid** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=addcontact&
uid=resellid&pw=resellpw&RegistrantFirstName=john&RegistrantLastName=doe&

# AddToCart

---

## Description

### Definition

Add an item to the shopping cart.

### Usage

An end user executes this command to place an item in the shopping cart.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Check the availability of a domain name.

<http://www.enom.com/domains/Register.asp>

On the **register a name** page, the **add to cart** button calls the **AddToCart** command. If the user selects multiple items, clicking the **add to cart** button calls the **AddToCart** command once for each item.

## Constraints

The items a user attempts to add to the cart must meet the following requirements:

- The query must include at least one item for the **AddToCart** command to succeed.
- If the item is a domain name, a search of the Registry must confirm that the name is available.
- The domain names must be valid (see the domain-name constraints under [Check](#)).
- The domain names must use a top-level domain supported by this registrar.
- The number of SLDs must match the number of TLDs.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=AddToCart&UID=YourLoginID  
&PW=YourPassword&SLD=SLDValue&TLD=TLDvalue&ProductType=ProductToAdd&  
OptParam1=OptParamValue1&OptParam2=OptParamValue2`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>EndUserIP</b>	Required	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15

Param name	Obligation	Definition	Max size
<b>ProductType</b>	<b>Required</b>	Type of product to add. Permitted values are: <b>Register</b> <b>Transfer</b> <b>Renew</b> (Use <b>Renew</b> for all TLDs including .name bundles) <b>RGP</b> <b>Extended RGP</b> <b>Host</b> (DNS hosting) <b>Host Renew</b> <b>POP</b> <b>Renew-POP</b> <b>EmailStorage</b> (10MB POP storage) <b>EmailForwarding</b> <b>EmailForwardingRenew</b> <b>DotNameBundle</b> <b>DotNameForwarding</b> (Use <b>DotNameForwarding</b> when the .name domain was purchased using the <a href="#">Purchase</a> command. If a .name domain is purchased using the shopping cart, the email forwarding service provided by the .name Registry is automatically bundled with the domain.) <b>URLForwarding</b> <b>URLForwardingRenew</b> <b>BlackLabelRenew</b> <b>Certificate-GeoTrust-QuickSSL</b> <b>Certificate-GeoTrust-QuickSSL-Premium</b> <b>Certificate-GeoTrust-TrueBizID</b> <b>Certificate-GeoTrust-TrueBizID-Wildcard</b> <b>IDProtect</b> (Whois Privacy Protection) <b>WebHosting</b> <b>WebHostingSetupFee</b> <b>WSCBasic</b> <b>WSCFull</b> <b>WSCECommerce</b> <b>WebMonitor</b> <b>Traffic</b> <b>TrafficUpgrade</b>	16
<b>SLD</b>	<b>Required</b> for <b>Register</b> <b>Transfer</b> <b>Renew</b> <b>RGP</b> <b>Extended RGP</b> <b>Host</b> <b>Host Renew</b> <b>EmailForwarding</b> <b>EmailForwardingRenew</b> <b>DotNameBundle</b> <b>DotNameForwarding</b> <b>URLForwarding</b> <b>URLForwardingRenew</b> <b>BlackLabelRenew</b> <b>IDProtect</b>	Second-level domain name (for example, enom in enom.com)	63

Param name	Obligation	Definition	Max size
<b>TLD</b>	<b>Required</b> for <b>Register</b> <b>Transfer</b> <b>Renew</b> <b>RGP</b> <b>Extended RGP</b> <b>Host</b> <b>Host Renew</b> <b>EmailForwarding</b> <b>EmailForwardingRenew</b> <b>DotNameBundle</b> <b>DotNameForwarding</b> <b>URLForwarding</b> <b>URLForwardingRenew</b> <b>BlackLabelRenew</b> <b>IDProtect</b>	Top-level domain name (extension)	15
<b>Quantity</b>	Optional for <b>Register</b>	Number of years	2
<b>AutoRenew</b>	Optional for <b>Register</b>	Domain name ID number. To retrieve this value, use the <a href="#">GetDomainInfo</a> command.	10
<b>RegLock</b>	Optional for <b>Register</b>	Domain name ID number. To retrieve this value, use the <a href="#">GetDomainInfo</a> command.	10
<b>DomainNameID</b>	<b>Required</b> for <b>POP</b> <b>Renew-POP</b> <b>EmailStorage</b>	Domain name ID number. To retrieve this value for a domain that is already registered, use the <a href="#">GetDomainInfo</a> command. To retrieve this value for a domain that is in the shopping cart, use the <b>NameID</b> value from the <a href="#">GetCartContent</a> command.	10
<b>ProductID</b>	<b>Required</b> for <b>Renew-POP</b> <b>EmailStorage</b>	POP pak ID number. To retrieve this value, use the <a href="#">GetPOP3</a> command.	3
<b>HostID</b>	<b>Required</b> for <b>WebHosting</b>	Web hosting account name. Must be alphanumeric.	6 to 14
<b>HostPW</b>	<b>Required</b> for <b>WebHosting</b>	Web hosting account password. Must be alphanumeric.	6 to 14
<b>Package</b>	<b>Required</b> for <b>WebHosting</b>	Web hosting package. Permitted values are: <b>eNom</b> (50MB Access DB) <b>eNom+SQL+50</b> (50MB SQL Server DB) <b>eNom+SQL+250</b> (250MB SQL) <b>eNom+SQL+500</b> (500MB SQL)	
<b>OverageOption</b>	<b>Required</b> for <b>WebHosting</b>	Overage handling option. Permitted values are: <b>1</b> Automatically upgrade bandwidth <b>2</b> Charge overage fee <b>3</b> Temporarily disable until next month	1
<b>Domain</b>	Optional for <b>WebHosting</b>	Name of domain to associate with this Web hosting account. Use format <i>sld.tld</i>	79
<b>SetHostRecords</b>	<b>Required</b> for <b>WebHosting</b>	Update www and @ host records to point to this Web hosting account. Permitted values are <b>Yes</b> or <b>No</b> .	3

Param name	Obligation	Definition	Max size
<b>WSCOption</b>	Optional for <b>WebHosting</b>	Subscribe to WebSite Creator (WSC) as an add-on to Web hosting? Lets you publish 1 Web site created with WSC, plus up to 9 others. Permitted values are: <i>No value</i> Do not subscribe to WSC <b>WSCBasic</b> WSC Basic version <b>WSCFull</b> WSC Full version <b>WSCECommerce</b> WSC e-Commerce	12
<b>WSONly</b>	<b>Required</b> for <b>ProductType=WSCBasic</b> <b>WSCFull</b> <b>WSCECommerce</b> (Note: this param is <i>not</i> used with <b>WSCOption=</b> )	Subscribe to WebSite Creator (WSC) as the primary product? The only Web site you will be able to publish is the one created using WSC. Required value is <b>1</b> .	1
<b>Quantity</b>	<b>Required</b> for <b>WebMonitor</b>	Number of items. For <b>ProductType=WebMonitor</b> , <b>Quantity</b> must be at least as large as the number of locations X you configure.	2
<b>GroupName</b>	<b>Required</b> for <b>WebMonitor</b>	Label, assigned by the user, to contain and organize this group of Web Monitor locations	14
<b>Enabled</b>	Optional for <b>WebMonitor</b> ; default is <b>no</b>	Enabled setting for Web Monitor. Permitted values are <b>yes</b> and <b>no</b> .	3
<b>Interval</b>	<b>Required</b> for <b>WebMonitor</b>	Monitoring period, in minutes. Permitted values are <b>5, 10, 15, 30, 60</b> .	2
<b>ContactName</b>	Optional for <b>WebMonitor</b>	Nickname, assigned by the user, of the contact person for this Web Monitor group	30
<b>NotifyEmail</b>	<b>Required</b> for <b>WebMonitor</b>	Email address of the person to be notified when locations in this group go up or down	90
<b>StartTime</b>	<b>Required</b> for <b>WebMonitor</b>	Start time of the time of day to be monitored, in <i>HHMM</i> format. <b>0000</b> is midnight.	4
<b>EndTime</b>	<b>Required</b> for <b>WebMonitor</b>	End time of the time of day to be monitored, in <i>HHMM</i> format. If <b>StartTime</b> and <b>EndTime</b> are both <b>0000</b> , the group is monitored 24 hours a day.	4
<b>TimeZone</b>	<b>Required</b> for <b>WebMonitor</b> ; must be a whole number	Time zone of the <b>StartTime</b> and <b>EndTime</b> values, in relation to UTC (GMT). For example, if you live in the Pacific time zone, which is 8 hours earlier than Greenwich time, and want your Web site monitored from 8:00AM to 6:00PM each day, your query string would include <b>StartTime=0800&amp;Endtime=1800&amp;TimeZone=-8</b>	3
<b>DaylightSavings</b>	Optional for <b>WebMonitor</b>	Does the contact person for this account live in a place that observes Northern Hemisphere Daylight Savings Time? Permitted values are <b>yes</b> or <b>no</b> . This parameter is relevant only if your notification period is less than 24 hours per day.	3
<b>LocationNameX</b>	<b>Required</b> for <b>WebMonitor</b>	Nickname, assigned by the user, to identify Web location X	14

Param name	Obligation	Definition	Max size
<b>URI</b>	<b>Required</b> for <b>WebMonitor</b>	Exact Web address of the location to be monitored. Must begin with <b>http://</b> or <b>https://</b>	1500
<b>AccountName</b>	<b>Required</b> for <b>Traffic</b>	Name of this Traffic Vista account, assigned by the user	6 to 14
<b>AccountPassword</b>	<b>Required</b> for <b>Traffic</b>	Password of this Traffic Vista account	6 to 14
<b>ConfirmAccountPassword</b>	<b>Required</b> for <b>Traffic</b>	Confirm the password of this Traffic Vista account. Must match <b>AccountPassword</b>	6 to 14
<b>Views</b>	<b>Required</b> for <b>Traffic</b>	Number of 100,000 page-view packages to add to cart	1
<b>OverageOption</b>	<b>Required</b> for <b>Traffic</b>	Keep Traffic Vista running if this month's count exceeds 100,000? Permitted values are: <b>1</b> keep counting and charge an overage fee <b>2</b> disable Traffic Vista until next month	1
<b>UpgradeOption</b>	<b>Required</b> for <b>Traffic</b>	Permanently and automatically upgrade to a higher page-view limit if I exceed this month's limit? Permitted values are: <b>1</b> Permanently and automatically upgrade to a higher limit <b>2</b> Do not permanently upgrade. Keep this month's original settings and apply them again next month unless I manually upgrade.	1
<b>Quantity</b>	Optional for <b>TrafficUpgrade</b> ; default is <b>1</b>	Number of 100K-page-view units to add to this Traffic Vista account. Each unit raises the number of page views we'll count per month (as opposed to increasing the number of months). Once you upgrade, your subscription permanently reflects the higher limit.	1
<b>TrafficLoginID</b>	<b>Required</b> for <b>TrafficUpgrade</b>	Account name for the Traffic Vista account	14
<b>ClearItems</b>	Optional; you must also add another item to the cart in the same query	Make all items currently in the cart inactive (but keep them in the cart), and add a new item. Permitted value is <b>yes</b> . To reactivate items in the cart that are inactive, use the <a href="#">UpdateCart</a> command.	3
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ItemName</b>	Domain name or service
<b>ItemId</b>	Item number
<b>Price</b>	Price for this product or service
<b>ICANNFees</b>	Fees charged by ICANN for this product or service
<b>CartItemID</b>	ID number, assigned by us, of this item in your shopping cart
<b>ItemAdded</b>	<b>True</b> indicates this entire response has reached you successfully.
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds **resellerdocs.com** to the shopping cart of account **resellid** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=addtocart&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&producttype=register&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <ItemName>resellerdocs.com</ItemName>
  <ItemId />
  <Price>29.95</Price>
  <ItemAdded>True</ItemAdded>
  <Command>ADDTOCART</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# AuthorizeTLD

---

## Description

### Definition

Create or add to a list of TLDs that you offer to your resellers and retail customers.

### Usage

Use this command to specify the TLDs that you offer to your resellers and retail customers. This command controls authorization for registrations, renewals, and transfers.

Using this command switches from the list of all TLDs we offer, which is the default, to your own list that contains only the TLDs you authorize.

You can use this command to add to create or add to your list of authorized TLDs.

To revert from the authorized TLD mode back to the default mode, or to remove TLDs from your list, use the [RemoveTLD](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

Clicking the **TLD Pricing** tab shows either the complete set of TLDs we offer, or the TLDs you have authorized.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- You can only authorize TLDs that we offer.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

Param name	Obligation	Definition	Max size
<b>TLD</b>	Either <b>TLD</b> or <b>DomainList</b> is <b>Required</b>	One top-level domain (TLD) to add to your list of authorized TLDs. For example, if you want to add .biz, use <b>TLD=biz</b> .	15
<b>DomainList</b>	Either <b>TLD</b> or <b>DomainList</b> is <b>Required</b>	Comma-separated list of TLDs to add to your list of authorized TLDs. For example, if you want to add .com, .net, and .org, use <b>DomainList=com,net,org</b> .	100
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>AuthorizeTLDX</b>	TLD to add to authorized list. If <b>ResponseType=text</b> or <b>html</b> , each entry is indexed X.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query authorizes TLDs **.com**, **.net**, and **.org** for account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=authorizeTld
uid=resellid&pw=resellpw&domainlist=com,net,org,info,biz&responsetype=xml
```

In the response, the list of TLDs and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <tldlist>
    <authorizeTld>com</authorizeTld>
    <authorizeTld>net</authorizeTld>
    <authorizeTld>org</authorizeTld>
  </tldlist>
  <Command>AUTHORIZETLD</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
```

```
<Site />
<IsLockable />
<IsRealTimeTLD />
<ExecTime>0.1523438</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# Check

---

## Description

### Definition

Check the availability of a domain name, both at the Registry and in our auction system.

### Usage

Use this command to check whether a domain name is already registered.

### Availability

The **Check** command is available to every reseller.

### Implementation on eNom.com

<http://www.enom.com/>

In the **check a domain name** area near the top of the page, the **Go** button activates the **Check** command.

## Constraints

Domain names must meet the following requirements:

- Second-level domain (SLD) must be composed of the letters **a** through **z**, the numbers **0** through **9**, and the hyphen (-) character.
- Some foreign character sets can display onscreen, but resolve to alphanumeric plus hyphen characters in the underlying code.
- The SLD must not begin or end with the hyphen character.
- The SLD must not contain spaces.
- The SLD must not contain special characters other than the hyphen character.
- The third and fourth characters of the SLD must not both be hyphens unless it is an encoded international-character domain name.
- The SLD must contain 2 to 63 characters, inclusive.
- SLDs are not case sensitive.
- The SLD-TLD combination must be unique.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?Command=Check&UID=YourLogin  
&PW=YourPassword&SLD=DesiredSLD&TLD=DesiredTLD&OptParam1=ParamValue1  
&OptParam2=ParamValue2**

Param name	Obligation	Definition	Max size
<b>UID</b>	<b>Required</b>	Account login ID	20
<b>PW</b>	<b>Required</b>	Account password	20
<b>SLD</b>	<b>Required</b> unless <b>DomainList</b> is used	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	<b>Required</b> unless <b>DomainList</b> or <b>TLDList</b> is used	Top-level domain name (extension). Permitted values: <i>Any single TLD</i> , for example, <b>com</b> * returns 11 of the most commonly used TLDs * <b>1</b> returns com, net, org, info, biz, us, ws * <b>2</b> returns com, net, org, info, biz, us @ returns com, net, org	15
<b>DomainList</b>	Optional	A comma- or newline-delimited list of domains to check, up to 30 names. If used, <b>SLD</b> and <b>TLD</b> are ignored.	2000
<b>TLDList</b>	Optional	A comma- or newline-delimited list of TLDs to check, up to 30 names. If used, <b>TLD</b> is ignored. Do not use with <b>DomainSpinner</b> .	2000
<b>DomainSpinner</b>	Optional	Set to <b>1</b> only if you want a set of recommended names returned. Do not use with <b>TLDList</b> .	3
<b>Word1</b>	Optional	First word for domain recommendations. Use only when <b>DomainSpinner=1</b> .	30
<b>Word2</b>	Optional	Second word for domain recommendations. Use only when <b>DomainSpinner=1</b> .	30
<b>Word3</b>	Optional	Third word for domain recommendations. Use only when <b>DomainSpinner=1</b> .	30
<b>AllowDash</b>	Optional	Specify whether to allow dashes in names. Use only when <b>DomainSpinner=1</b> .	30
<b>StartPosition</b>	Optional	If many names are returned the check can be resubmitted using this value to start building the list from the end of the previously returned names. Use only when <b>DomainSpinner=1</b> .	30

## Returned parameters and values

Param name	Definition
<b>DomainX</b>	If return includes multiple domains, the name of domain <i>X</i>
<b>RRPCodeX</b>	Success code. Only <b>210</b> indicates that the name is available at the Registry. <b>211</b> indicates the domain is not available at the Registry.
<b>RRPTextX</b>	Text which accompanies and describes the RRPCode. <b>210</b> = available, <b>211</b> = not available.
<b>AuctionDateX</b>	Scheduled closing date for this auction
<b>AuctionIDX</b>	Auction ID number for this domain name, assigned by us

Param name	Definition
<b>DomainCount</b>	The number of names checked.
<b>SuggestedNameY</b>	Currently available suggested names. Y is <b>1</b> through <i>Spincount</i> passed to this command. Returned only if <b>DomainSpinner=1</b> .
<b>com-available</b>	Returns whether .com is available. Value will be yes or no. Additional params are <b>net-available</b> , <b>org-available</b> , <b>cc-available</b> , and <b>tv-available</b> . Returned only if <b>DomainSpinner=1</b> .
<b>originalSLD</b>	The original domain name being checked. Returned only if <b>DomainSpinner=1</b> .
<b>originalTLD</b>	The original top-level name (extension) being checked. Returned only if <b>DomainSpinner=1</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- TLD** can be replaced with a **\*** to check all top-level names without name spinning or replaced with **@** to check only the primary .com/.net/.org names.
- SLD/TLD** params are a single combination use of this command, the **DomainList** is another use, and **DomainSpinner** with the remaining parameters is a separate use of this command.
- When parsing the response, use the **RRPCode** value rather than the **RRPText** value or the position in the response. Of these, only the **RRPCode** value is guaranteed by the Registry to be stable.

## Example

The following checks whether the domain name **example.com** is available and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=check&
sld=example&tld=com&responsetype=xml
```

The response indicates that **example.com** is **not available**:

```
<?xml version="1.0" ?>
<interface-response>
  <RRPCode>211</RRPCode>
  <RRPText>Domain name not available</RRPText>
  <Command>CHECK</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# CheckLogin

---

## Description

### Definition

Validate user login for a domain name.

### Usage

Use this command when you want to validate a user's identity.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://www.enom.com/Login.asp?page=%2Fmyaccount%2FDefault%2Easp%3F>

Clicking the **log-in** button calls the **CheckLogin** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?Command=CheckLogin&UID=YourLogin  
&PW=YourPassword**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>PartyID</b>	PartyID of the account
<b>Reseller</b>	Is this a reseller account?
<b>RSA</b>	Reserved parameter. Should always return <b>False</b> .
<b>ClubDrop</b>	Is this account a Club Drop member?
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the party ID and reseller status of account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=checklogin&
uid=resellid&pw=resellpw&responsetype=xml
```

The response provides basic information about the account:

```
<?xml version="1.0" ?>
<interface-response>
  <PartyID>{BB4A2DE1-6485-45CB-A4FC-EE39BA0C1629}</PartyID>
  <Reseller>True</Reseller>
  <RSA>False</RSA>
  <ClubDrop>False</ClubDrop>
  <Command>CHECKLOGIN</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# CheckNSStatus

---

## Description

### Definition

Check the status of a name server.

### Usage

Use this command when you want to determine whether a name server exists.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The name server must exist.
- The query must call the name server in a valid format (by its use name, not its IP address).

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>CheckNSName</b>	Required	Name server use name to check. Use format <i>dnsX.NameServerName.com</i> .	63

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the status of name server ns1.name-services.com, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=checknsstatus&
uid=resellid&pw=resellpw&checknsname=ns1.name-services.com&
responsetype=xml
```

The **NsCheckStatus** value of **1** indicates that the name server was found:

```
<?xml version="1.0" ?>
<interface-response>
  <NsCheckSuccess>1</NsCheckSuccess>
  <CheckNsStatus>
    <created-by>enom1</created-by>
    <registrar>enom1</registrar>
    <ipaddress>127.0.0.1</ipaddress>
    <updated-by>y2ktest</updated-by>
    <created-date>2002-01-15 15:33:35.0</created-date>
    <updated-date>2002-04-18 13:35:43.0</updated-date>
  </CheckNsStatus>
  <RRPCode />
  <RRPText />
  <Command>CHECKNSSTATUS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

---

# CommissionAccount

---

## Description

### Definition

Returns the current commission balance for an account.

### Usage

Use this command to return the current commission balances for an account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/resellers/SubAccount.asp>

On the **subaccount** page, the **Access** link calls the **CommissionAccount** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&  
uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the total and available commission balances for account **resellid**, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=commissionaccount&
uid=resellid&pw=resellpw&responsetype=xml
```

The response lists the balances:

```
<?xml version="1.0" ?>
<interface-response>
  <CommissionAccount>
    <Action />
    <data-errors />
    <CommissionBalance>6.69</CommissionBalance>
    <AvailComBalance>0</AvailComBalance>
  </CommissionAccount>
  <Command>COMMISSIONACCOUNT</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# Contacts

---

## Description

### Definition

Update contact information for a domain name.

### Usage

Use this command to set or change contact information for a domain.

If you want to update one contact type and leave the others as is, use this command with the **ContactType** parameter.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ContactConfig.asp?DomainNameID=152533676>

On the **edit contact info** page, typing information in the text boxes provides the parameter values for the **Contacts** command.

## Constraints

The query must meet the following requirements:

- The domain must exist in the account that is modifying it.
- Some country code TLDs require extended attributes (parameters that are specific to the country code). To find out whether a country code TLD requires extended parameters and what they are, run [GetExtAttributes](#) on the country code.
- The **BILLING** contact type cannot be updated with this command. To update billing information, use [UpdateAccountInfo](#).
- If you use the **ContactType** parameter, you can reset only one contact type.
- If you use the **ContactType** parameter, the contact type of the other parameters must match it (for example, if you set **ContactType=AUXBILLING**, you must use parameters **AuxBillingOrganizationName**, **AuxBillingFirstName**, and so on.
- If you don't use the **ContactType** parameter and don't supply new information for all contacts, those that you don't supply will be empty in the database and will use our defaults in interfaces.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ContactType</b>	Optional	Type of contact to add/update. Options are <b>REGISTRANT, AUXBILLING, TECH, ADMIN</b>	16
<i>ContactType</i> <b>OrganizationName</b>	Required for each contact type you add or update	Organization of <i>ContactType</i> contact	60
<i>ContactType</i> <b>FirstName</b>	Required for each contact type you add or update	First name of <i>ContactType</i> contact	60
<i>ContactType</i> <b>LastName</b>	Required for each contact type you add or update	Last name of <i>ContactType</i> contact	60
<i>ContactType</i> <b>JobTitle</b>	Optional	Job title of <i>ContactType</i> contact	60
<i>ContactType</i> <b>Address1</b>	Required for each contact type you add or update	Address of <i>ContactType</i> contact	60
<i>ContactType</i> <b>Address2</b>	Optional	Additional address info of <i>ContactType</i> contact	60
<i>ContactType</i> <b>City</b>	Required for each contact type you add or update	City of <i>ContactType</i> contact	60
<i>ContactType</i> <b>StateProvinceChoice</b>	Optional	State or province choice of <i>ContactType</i> contact. Permitted values are: <b>S</b> State <b>P</b> Province	1
<i>ContactType</i> <b>StateProvince</b>	Optional	State or province of <i>ContactType</i> contact	60
<i>ContactType</i> <b>PostalCode</b>	Optional	Postal code of <i>ContactType</i> contact	16
<i>ContactType</i> <b>Country</b>	Required for each contact type you add or update	Country of <i>ContactType</i> contact	60
<i>ContactType</i> <b>EmailAddress</b>	Required for each contact type you add or update	Email address of <i>ContactType</i> contact	128

Param name	Obligation	Definition	Max size
<i>ContactTypePhone</i>	<b>Required</b> for each contact type you add or update	Phone number of ContactType contact. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<i>ContactTypeFax</i>	Optional	Fax number of ContactType contact. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<i>ExtendedAttributes</i>	<b>Required</b> for some country codes	Data required by the Registry for some country codes. Use <a href="#">GetExtAttributes</a> to determine whether this TLD requires extended attributes.	varies

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The **BILLING** contact type cannot be updated with this command. To update billing information, use [UpdateAccountInfo](#).
- You can submit multiple contact data in a single request by omitting the **ContactType** parameter and sending additional contact data by replacing **Registrant** in the above optional parameters with the **ContactTypes AUXBILLING, TECH, or ADMIN**.
- If you use the **ContactType** parameter, you can reset only one contact type.
- If you use the **ContactType** parameter, the contact type of the other parameters must match it (for example, if you set **ContactType=AUXBILLING**, you must use parameters **AuxBillingOrganizationName**, **AuxBillingFirstName**, and so on).
- If you don't use the **ContactType** parameter and don't supply new information for all contacts, those that you don't supply will be empty in the database and will use our defaults in interfaces.
- AUXBILLING** masks the true billing contact in Whois output.
- Some country code TLDs require extended attributes (parameters that are specific to the country code). To find out whether a country code TLD requires extended parameters and what they are, run [GetExtAttributes](#) on the country code.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.

- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query provides new technical contact information for **resellerdocs.com** and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=contacts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
ContactType=Tech&TechFirstName=John&TechLastName=Smith&
TechPhone=+1.5555555555&TechAddress1=100%20Main%20St.&TechCity=Townsville&
TechCountry=USA&TechEmailAddress=john@resellerdocs.com&responsetype=xml
```

The error count of **0** in the response confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>CONTACTS</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# CreateAccount

## Description

### Definition

Create a new subaccount.

### Usage

Use this command to register a new customer, either reseller or retail.

**CreateAccount** differs from [CreateSubAccount](#) in that **CreateAccount** offers credit card processing.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

<http://resellertest.enom.com/NewAccount.asp?page=>

At the bottom of the information form, the **submit** button calls the **CreateAccount** command.

## Constraints

The query must meet the following requirements:

- Parameter values submitted in the query must pass validation tests.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>NewUID</b>	Optional	Subaccount login ID	16
<b>NewPW</b>	Optional	Subaccount password	16
<b>ConfirmPW</b>	Optional	Confirm subaccount password	16
<b>RegistrantOrganizationName</b>	Required	Registrant organization	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantFirstName</b>	Required	Registrant first name	60
<b>RegistrantLastName</b>	Required	Registrant last name	60
<b>RegistrantAddress1</b>	Required	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required	Registrant city	60
<b>RegistrantPostalCode</b>	Required	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60

Param name	Obligation	Definition	Max size
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>RegistrantCountry</b>	Optional	Registrant country	60
<b>RegistrantPhone</b>	Required	Registrant phone number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<b>RegistrantEmailAddress</b>	Required	Email address for WhoIs	128
<b>RegistrantEmailAddress_Contact</b>	Optional	Email address for us to contact you about your domain name account	128
<b>CardType</b>	Required	Type of credit card	20
<b>CCName</b>	Required	Cardholder's name	60
<b>CreditCardNumber</b>	Required	Customer's credit card number	128
<b>CreditCardExpMonth</b>	Required	Credit card expiration month	2
<b>CreditCardExpYear</b>	Required	Credit card expiration year	4
<b>CVV2</b>	Required	Credit card verification code	4
<b>CCAddress</b>	Required	Credit card billing address	60
<b>CCZip</b>	Required	Credit card billing postal code	15
<b>CCCountry</b>	Required	Credit card billing country	60
<b>AuthQuestionType</b>	Optional	Type of question. Values can be <b>smaiden, sbirth, ssocial, shigh</b>	10
<b>AuthQuestionAnswer</b>	Optional	The answer to the question type (mother's maiden name, city of birth, last 4 digits of social security, or high school)	50
<b>EmailInfo</b>	Optional	The value of a send e-mail notification checkbox. If <b>EmailInfo=checked</b> an email will be sent to the registrant email parameter posted with this request containing this account information	10
<b>DefPeriod</b>	Optional	Default number of years for the account to register names	2
<b>Reseller</b>	Optional	<b>1</b> = set this account up as a reseller, <b>0</b> = set this account up as a retail customer	1

## Returned parameters and values

Param name	Definition
<b>OrganizationName</b>	Organization name of the Billing contact
<b>FName</b>	First name (given name) of the Billing contact
<b>LName</b>	Last name (family name) of the Billing contact
<b>JobTitle</b>	Job title for the Billing contact

Param name	Definition
<b>Address1</b>	Address, line 1, for the Billing contact
<b>Address2</b>	Address, line 2, for the Billing contact
<b>City</b>	City for the Billing contact
<b>StateProvince</b>	State or province for the Billing contact
<b>StateProvinceChoice</b>	Tells whether <b>StateProvince</b> value is a state or a province
<b>PostalCode</b>	Postal code for the Billing contact
<b>Country</b>	County for the Billing contact
<b>Phone</b>	Phone number for the Billing contact
<b>PhoneExt</b>	Phone extension for the Billing contact
<b>Fax</b>	Fax number for the Billing contact
<b>EmailAddress</b>	Email address for public WhoIs record
<b>EmailAddress_Contact</b>	Email address that we use when contacting account owner about this account
<b>EmailInfo</b>	Tells whether confirmation emails should be sent to these email addresses
<b>CCType</b>	Type of credit card
<b>CCName</b>	Cardholder's name
<b>CCNumber</b>	Credit card number
<b>CCMonth</b>	Expiration month for this credit card
<b>CCYear</b>	Expiration year for this credit card
<b>CCAddress</b>	Billing address street address for this credit card
<b>CCCity</b>	Billing address city for this credit card
<b>CCStateProvince</b>	Billing address state or province for this credit card
<b>CCZip</b>	Billing address postal code for this credit card
<b>CCCountry</b>	Billing address country for this credit card
<b>CCPhone</b>	Phone number on record for this credit card
<b>Reseller</b>	<b>1</b> indicates this subaccount is a reseller account; <b>0</b> indicates retail
<b>NewUID</b>	Login ID for this subaccount
<b>NewPW</b>	Password for this subaccount
<b>ConfirmPW</b>	Repeat password, for confirmation purposes
<b>AuthQuestionType</b>	Type of authorization question for this subaccount
<b>AuthQuestionAnswer</b>	Answer to the authorization question
<b>DefPeriod</b>	Default registration period for domain names, in years
<b>StatusCustomerInfo</b>	Returns Successful if the subaccount was created
<b>PartyID</b>	Party ID of this subaccount, for our records
<b>Account</b>	Account ID code of this subaccount, for our records. We recommend that you store this value, because it is used for additional commands such as <a href="#">MakeResellerAccount</a> .
<b>sLoginPass</b>	Code we use to log the user into the new subaccount immediately.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- If there are errors validating the data passed in, the same parameters and values are returned to rebuild the form.

## Example

The following query creates subaccount **olerud**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=CreateAccount&
uid=resellid&pw=resellpw&NewUID=olerud&
NewPW=olerudpw&ConfirmPW=olerudpw&
RegistrantOrganizationName=Reseller%20Documents%20Inc.&RegistrantFirstName=John&
RegistrantLastName=Doe&RegistrantJobTitle=First%20Baseman&
RegistrantAddress1=111%20Main%20St.&RegistrantCity=Hometown&
RegistrantPostalCode=99999&RegistrantCountry=United+States&
RegistrantEmailAddress=john%20Edoe%40resellerdocs%20Ecom&
RegistrantPhone=+1.5555555555&RegistrantFax=+1.5555555556&AuthQuestionType=smaiden&
AuthQuestionAnswer=jones&Reseller=0&CardType=visa&CCName=test&DefPeriod=1&
ResponseType=XML
```

The response confirms the successful creation of the subaccount and returns subaccount information:

```
<?xml version="1.0" ?>
<interface-response>
  <NewAccount>
    <StatusCustomerInfo>Successful</StatusCustomerInfo>
    <PartyID>{8D504DD5-C773-41C4-83F6-4495CA479103}</PartyID>
    <Account>154-dz-5567</Account>
    <sLoginPass>
      91DDFEF7E0E7F6A9DDFEF7E0E7F6A9A5BDA0A6BDA0A2A2A0B2A5A8A2A3A8A2AAB2C2DF
    </sLoginPass>
  </NewAccount>
  <Command>CREATEACCOUNT</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# CreateSubAccount

## Description

### Definition

Create a subaccount.

### Usage

Use this command to register a new customer, either reseller or retail.

Resellers can also create subaccounts to help organize their business.

Sites created with PDQ call the **CreateSubAccount** command when a user clicks the **create account** button.

**CreateSubAccount** differs from [CreateAccount](#) in that [CreateAccount](#) offers credit card processing; **CreateSubAccount** does not.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://www.enom.com/resellers/NewSubAccount.asp?>

The **submit** button calls the **CreateSubAccount** command.

## Constraints

The query must meet the following requirements:

- The account must have reseller status in eNom's database.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>NewUID</b>	Required	Subaccount login ID	16
<b>NewPW</b>	Required	Subaccount password	16
<b>ConfirmPW</b>	Optional	Confirm subaccount password	16
<b>AuthQuestionType</b>	Optional	Type of question. Values can be <b>smaiden</b> , <b>sbirth</b> , <b>ssocial</b> , <b>shigh</b>	10

Param name	Obligation	Definition	Max size
<b>AuthQuestionAnswer</b>	Optional	The answer to the question type (mother's maiden name, city of birth, last 4 digits of social security, or high school)	50
<b>RegistrantAddress1</b>	Required	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required	Registrant city	60
<b>RegistrantCountry</b>	Optional	Registrant country	60
<b>RegistrantEmailAddress</b>	Required	Email address for WhoIs	128
<b>RegistrantEmailAddress_Contact</b>	Optional	Email address for us to contact you about your domain name account	128
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<b>RegistrantFirstName</b>	Required	Registrant first name	60
<b>RegistrantLastName</b>	Required	Registrant last name	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantOrganizationName</b>	Required	Registrant organization	60
<b>RegistrantPhone</b>	Optional	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<b>RegistrantPostalCode</b>	Optional	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>Reseller</b>	Optional	<b>1</b> = set this account up as a reseller, <b>0</b> = set this account up as a retail customer	1

## Returned parameters and values

Param name	Definition
<b>StatusCustomerInfo</b>	Returns <b>Successful</b> if account was created
<b>PartyID</b>	Party ID for the new subaccount
<b>Account</b>	Account ID for the new subaccount
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.

- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query creates a new subaccount, **resellsub4**, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=CreateSubAccount&
uid=resellid&pw=resellpw&newuid=resellsub4&newpw=resellsub4&
confirmpw=resellsub4&RegistrantOrganizationName=Reseller%20Documents%20Inc.&
RegistrantFirstName=John&RegistrantLastName=doe&RegistrantAddress1=111%20Main%20St.&
RegistrantCity=Hometown&RegistrantStateProvince=WA&RegistrantStateProvinceChoice=S&
RegistrantPostalCode=98003&RegistrantCountry=United+States&
RegistrantEmailAddress=John%20Edoe%40resellerdocs%20Ecom&
RegistrantPhone=+1.5555555555&RegistrantFax=+1.5555555556&
AuthQuestionType=smaiden&AuthQuestionAnswer=jones&Reseller=0&ResponseType=XML
```

The response confirms the successful creation of the subaccount:

```
<?xml version="1.0" ?>
<interface-response>
  <NewAccount>
    <StatusCustomerInfo>Successful</StatusCustomerInfo>

# DeleteAllPOPPaks

## Description

### Definition

Delete all POP3 email paks in a domain.

### Usage

Use this command to delete all POP3 paks from a domain. Note that if you delete the POP paks, the only way to replace them is to buy new paks.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- All POP paks in the domain must have no user emails configured. You can use the [DeletePOP3](#) command to remove user email accounts.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>PaksRemoved</b>	Number of POP paks removed from the domain name
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Use the [DeletePOP3](#) command to delete any email user accounts before running **DeleteAllPOPPaks**.

## Example

The following query deletes all POP3 10-paks from **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DeleteAllPOPPaks&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

In the response, the error count **0** confirms that the command executed successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>DELETEALLPOPPAKS</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# DeleteContact

---

## Description

### Definition

Delete a contact from the address book.

### Usage

Use this command to delete a contact from a domain name account's address book.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The **RegistrantPartyID** must be for a contact in this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>RegistrantPartyID</b>	Required, and must be enclosed in curly braces	Party ID number of the contact you want to delete. Use the <a href="#">GetAddressBook</a> command to retrieve all contacts in a domain name account, or the <a href="#">GetContacts</a> command to retrieve the contacts for a specific domain.	40
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , 4 or <b>XML</b> .	

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query deletes a contact from a domain account's address book, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DELETECONTACT&
uid=resellid&pw=resellpw&
registrantpartyid={4545A013-B40A-4D50-A15A-5D4356723794}&responsetype=xml
```

In the response, the **ErrCount** value **0** confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>DELETECONTACT</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>

# DeleteCustomerDefinedData

## Description

### Definition

Delete customer-defined data records.

### Usage

Use this command to delete customer-defined data.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ObjectID</b>	Required	Object ID number, an integer assigned when this customer-defined field was first established.	2
<b>Type</b>	Required	Object type. Options are: 1 Data pertaining to an account 2 Data pertaining to a domain 3 Data pertaining to an order	1
<b>SLD</b>	Required if Type=2	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required if Type=2	Top-level domain name (extension)	15
<b>OrderID</b>	Required if Type=3	Order ID, which you can retrieve using the <a href="#">GetDomainStatus</a> comand.	11
<b>Key</b>	Required	Title of this entry, or label describing this data field	50
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query deletes the customer-defined data labeled **FavoriteCuisine** from account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=deletecustomerdefineddata&
uid=resellid&pw=resellpw&ObjectID=1&Type=1&Key=FavoriteCuisine&
responsetype=xml
```

In the response, the **ErrCount** value **0** confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>DELETECUSTOMERDEFINEDDATA</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>

# DeleteFromCart

---

## Description

### Definition

Delete an item or all items from the shopping cart.

### Usage

Use this command when you want to remove one or all items from the shopping cart.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/Cart.asp>

The **delete** button behaves similarly to the **DeleteFromCart** command.

## Constraints

The query must meet the following requirements:

- The shopping cart must contain one or more items.
- One or all items in the shopping cart must be deleted.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	<b>Required</b>	Account login ID	20
<b>PW</b>	<b>Required</b>	Account password	20
<b>ItemNumber</b>	Either <b>ItemNumber</b> or <b>EmptyCart</b> is <b>Required</b>	Item ID number of the item to be deleted from the shopping cart. Use the <a href="#">GetCartContent</a> command to retrieve the item ID numbers.	10
<b>EmptyCart</b>	Either <b>ItemNumber</b> or <b>EmptyCart</b> is <b>Required</b>	Use <b>EmptyCart=On</b> to completely empty the shopping cart.	2
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ItemDeleted</b>	<b>True</b> if deleted.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that item **365485** be deleted from the shopping cart, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DeleteFromCart&
uid=resellid&pw=resellpw&ItemNumber=365485&ResponseType=XML
```

The response confirms the successful deletion from the shopping cart:

```
<?xml version="1.0" ?>
<interface-response>
  <ItemDeleted>True</ItemDeleted>
  <Command>DELETEFROMCART</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# DeleteHostedDomain

---

## Description

### Definition

Discontinue our DNS hosting of a domain name.

### Usage

Use this command to cancel our DNS hosting of a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must be hosted by this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>OldRegistrationStatus</b>	Registration status before running this query
<b>Status</b>	Success status for canceling DNS hosting on this domain
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query discontinues our DNS hosting of **ExternalHostedDomain.com**, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=DeleteHostedDomain&uid=resellid&pw=resellpw&sld=ExternalHostedDomain&tld=com&responsetype=xml
```

In the response, the **OldRegistrationStatus** value **Hosted** and the **ErrCount** value **0** indicate that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <DeleteHostedDomain>
    <OldRegistrationStatus>Hosted</OldRegistrationStatus>
    <Status>Success</Status>
  </DeleteHostedDomain>
  <Command>DELETEHOSTEDDOMAIN</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>Reseller3</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <TimeDifference>+03.00</TimeDifference>
  <ExecTime>0.15625</ExecTime>
  <Done>true</Done>
  <debug>

# DeleteNameServer

---

## Description

### Definition

Delete a name server at the Registry.

### Usage

Use this command to delete a name server at the Registry. This command does not affect the name servers listed for any individual domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/domains/RegNameServer.asp>

In the **Delete a Name Server** box, the **submit** button calls the **DeleteNameServer** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name server must be registered.
- The domain name this DNS uses must belong to this account.
- The domain name server must have no domains using it.
- All registrar locks and Registry holds must be off, and the domain must be in an active state.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>NS</b>	Required	Use name of name server, in format <i>dns1.ServerName.com</i>	60
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarLock</b>	Registrar lock status
<b>NsSuccess</b>	Success of the name server reset process
<b>RegistrarLock</b>	Registrar lock setting
<b>RRPCode</b>	Registry code
<b>RRPText</b>	Description of Registry code
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query deletes the name server registration for **dns3.resellerdocs.com** at the Registry, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=deletenameserver&
uid=resellid&pw=resellpw&ns=dns3.resellerdocs.com&responsetype=xml
```

In the response, the **NsSuccess** value **1**, the **RRPCode 200**, and the **RRPText Command completed successfully** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RegisterNameserver>
    <RegistrarLock>ACTIVE</RegistrarLock>
    <NsSuccess>1</NsSuccess>
    <RegistrarLock>REGISTRAR-LOCK</RegistrarLock>
  </RegisterNameserver>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>DELETENAMESERVER</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# DeletePOP3

---

## Description

### Definition

Delete an individual POP3 user name from the database.

### Usage

Use this command to delete an individual POP3 email user name. Once you delete it, you can fill that vacancy with another name. This command has no effect on the POP 10-pak nor on any other user names in the account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The user name must be listed in the POP3 list for the account.
- The user name must be in a POP pak for which the subscription is current.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>PopUser</b>	Required	POP mailbox user name to delete	16
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query deletes the POP user **james** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DeletePOP3&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&POPUser=james&
responsetype=xml
```

In the response, the error count of **0** confirms that the POP user was deleted successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>DELETEPOP3</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>

# DeletePOPPak

---

## Description

### Definition

Delete a POP email pak under a domain name.

### Usage

Use this command to delete an entire 10-pak of POP accounts. Note that once a pak is deleted, the only way to replace it is to purchase a new one.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The pak must have no user email accounts currently configured.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>BundleID</b>	Required	ID number of the POP pak to delete. Use <a href="#">GetPOP3</a> to get POP pak IDs.	6
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Use the [DeletePOP3](#) command to delete any email user accounts before running **DeletePOPPak**.

## Example

The following query deletes POP bundle **5733** from **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DeletePOPPak&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&BundleID=5733&
ResponseType=XML
```

The **ErrCount** value **0** confirms that the command was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>DELETEPOPPAK</Command>
  <ErrCount>0</ErrCount>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>

# DeleteSubaccount

## Description

### Definition

Delete a subaccount.

### Usage

Use this command to delete a retail or reseller subaccount.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/resellers/subaccount-list.asp>

On the **subaccounts** page, the **Delete** link calls the **DeleteSubaccount** command with the **Action=Confirm** parameter.

Click a **Delete** link

On the **Delete Sub-account** page, the **delete** button calls the **DeleteSubaccount** command with the **Action=Delete** parameter.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The subaccount must belong to this account.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Account</b>	Required	Subaccount ID number, in <i>NNN-aa-NNNN</i> format. You can retrieve the subaccount ID number using the <a href="#">GetSubAccounts</a> command.	11
<b>Action</b>	Optional; default value is <b>Confirm</b>	Action to take. Permitted values are <b>Confirm</b> Confirm which subaccount is to be deleted <b>Delete</b> Delete the subaccount specified in this query	7
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Action</b>	Action to be taken with regard to deleting this subaccount
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query deletes the sub-account with account number **332-ep-2379** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=deletesubaccount&
uid=resellid&pw=resellpw&account=332-ep-2379&Action=delete&
responsetype=xml
```

In the response, the **<Action>DELETE** return parameter and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DeleteSubAccount>
    <Action>DELETE</Action>
  </DeleteSubAccount>
  <Command>DELETESUBACCOUNT</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>e</Site>
  <IsLockable />
  <IsRealTimeTLD />
  <TimeDifference>+0.00</TimeDifference>
  <ExecTime>0.1523438</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# DisableServices

## Description

### Definition

Switch off a service in an account.

### Usage

Use this command to switch off a service in a domain name account.

This command does not shut down the service or cancel it at the end of the current billing period; it merely toggles it off.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ServiceSelection.asp?DomainNameID=152533676&service=wpps>

When the **unprotected** option button is selected, the **save changes** button calls the **DisableServices** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- Other constraints may apply depending on the services being disabled.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>Service</b>	Required	Name of the service to be disabled. Permitted value is <b>WPPS</b> (Whois Privacy Protection).	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Service</b>	Name of the service being disabled
<b>ServiceStatus</b>	New status of this service
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query disables the ID Protect Whois privacy protection service on **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=DISABLESERVICES&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&service=wpps&
responsetype=xml
```

In the response, the **ServiceStatus** value confirms the new status of the service:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Service>WPPS</Service>
  <ServiceStatus>Disabled</ServiceStatus>
  <Command>DISABLESERVICES</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>LOCALHOST</Server>
  <Site>enom</Site>
  <IsLockable>1</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

---

# EnableServices

---

## Description

### Definition

Switch on a service in a domain name account.

### Usage

Use this command to switch on a service in a domain name account.

This command does not give this account access to the service or subscribe to the service. Rather, it toggles on a service that the account has already subscribed to but has toggled off.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ServiceSelection.asp?DomainNameID=152533676&service=wpps>

When the **protected** option button is selected, the **save changes** button calls the **EnableServices** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- Other constraints may apply depending on the services being enabled.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>Service</b>	Required	Name of the service to be enabled. Permitted value is <b>WPPS</b> (Whois Privacy Protection).	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Service</b>	Name of the service being enabled
<b>ServiceStatus</b>	New status of this service
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query enables the ID Protect Whois privacy protection service on **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=ENABLESERVICES&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&service=wpps&
responsetype=xml
```

In the response, the **ServiceStatus** value confirms the new status of the service:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Service>WPPS</Service>
  <ServiceStatus>Enabled</ServiceStatus>
  <Command>ENABLESERVICES</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>LOCALHOST</Server>
  <Site>enom</Site>
  <IsLockable>1</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# Extend

---

## Description

### Definition

Extend (renew) the registration period for a domain name.

### Usage

Use this command to renew domain registrations in real time. We recommend that you renew at least a week before the domain expiration date.

Most commonly, this command is used by resellers who maintain their own databases. Resellers who use a shopping cart and our order processing queue generally use the [AddToCart](#) command with input parameter **ProductType=Renew**.

After a domain expires, use [UpdateExpiredDomains](#) to reactivate it and renew its registration.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel** page, the **add years** button calls the **Extend** command.

## Constraints

The query must meet the following requirements:

- To use our credit card processing, this must be an ETP reseller account.
- The domain name must be valid and active.
- The new expiration date cannot be more than 10 years in the future.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>NumYears</b>	Optional	Number of years to extend	2

Param name	Obligation	Definition	Max size
<b>ChargeAmount</b>	Optional	Amount to charge per year for the renewal. Use <i>DD.cc</i> format.	6
<b>OverrideOrder</b>	Optional	Use <b>OverrideOrder=1</b> to submit more than one renewal request for this domain name within 24 hours of the first transaction	1
<b>RegistrantFirstName</b>	<b>Required</b> if using our credit card processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> if using our credit card processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> if using our credit card processing	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	<b>Required</b> if using our credit card processing	Registrant city	60
<b>RegistrantCountry</b>	Optional	Registrant country	60
<b>RegistrantEmailAddress</b>	<b>Required</b> if using our credit card processing	Registrant email address	128
<b>RegistrantOrganizationName</b>	Optional	Registrant organization	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantPhone</b>	Optional	Registrant phone number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantPostalCode</b>	<b>Required</b> if using our credit card processing	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>UseCreditCard</b>	Optional	If <b>UseCreditCard=yes</b> , use eNom's credit-card processing services	3
<b>EndUserIP</b>	<b>Required</b> if <b>UseCreditCard=yes</b>	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>CardType</b>	<b>Required</b> if <b>UseCreditCard=yes</b>	Type of credit card	20

Param name	Obligation	Definition	Max size
<b>CCName</b>	Required if <b>UseCreditCard=yes</b>	Cardholder's name	60
<b>CreditCardNumber</b>	Required if <b>UseCreditCard=yes</b>	Customer's credit card number	128
<b>CreditCardExpMonth</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration month	2
<b>CreditCardExpYear</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration year	4
<b>CVV2</b>	Required if <b>UseCreditCard=yes</b>	Credit card verification code	4
<b>CCAddress</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing address	60
<b>CCZip</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing postal code	15
<b>CCCountry</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing country	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>OrderID</b>	Order number if successful. We recommend that you store this value for future use.
<b>Extension</b>	Returns <b>Successful</b> , otherwise this parameter isn't returned.
<b>RRPCode</b>	Success code. Only a <b>200</b> indicates success.
<b>RRPText</b>	Text which accompanies and describes the <b>RRPCode</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- If using our credit card option ALL credit card information is required.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- We recommend that you store the **OrderID** value—at least the most recent one for each domain—from the return. Several other commands use this value as a required input parameter.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the registration period for **resellerdocs.com** be extended for **1** year, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=Extend&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&NumYears=1&ResponseType=XML
```

The response confirms the successful extension of the registration period for the domain:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Extension>successful</Extension>
  <DomainName>resellerdocs.com</DomainName>
  <OrderID>156062933</OrderID>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>EXTEND</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# ExtendDomainDNS

## Description

### Definition

In real time, renew DNS hosting services for a domain name that is registered elsewhere.

### Usage

Use this command to renew DNS services for a name that is registered elsewhere. This is a real-time command that is most commonly used by resellers who maintain their own databases. Resellers who use a shopping cart and our order queue generally use the **AddToCart** command with input parameter **ProductType=HostRenew**.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/Checkout.asp>

The **ExtendDomainDNS** command is not implemented on [www.enom.com](http://www.enom.com). However, on the **checkout** page, the **purchase** button calls **InsertNewOrder**, a similar command that initiates checkout. The difference is that **InsertNewOrder** acquires contents of the shopping cart and puts them in a queue for checkout; the **ExtendDomainDNS** command bypasses the shopping cart and the queue.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- The domain name must not be registered with us, but must use our name servers.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>NumYears</b>	Optional	Number of years to add to the DNS hosting subscription. Default value is <b>1</b> . Maximum total is <b>10</b> .	2

Param name	Obligation	Definition	Max size
<b>RegistrantFirstName</b>	<b>Required</b> if using our credit card processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> if using our credit card processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> if using our credit card processing	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	<b>Required</b> if using our credit card processing	Registrant city	60
<b>RegistrantCountry</b>	Optional	Registrant country	60
<b>RegistrantEmailAddress</b>	<b>Required</b> if using our credit card processing	Registrant email address	128
<b>RegistrantOrganizationName</b>	Optional	Registrant organization	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantPhone</b>	Optional	Registrant phone. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters	20
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantPostalCode</b>	<b>Required</b> if using our credit card processing	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>ChargeAmount</b>	Optional	Amount to charge to the credit card	6
<b>UseCreditCard</b>	Optional	If UseCreditCard=yes, use our credit-card processing services	3
<b>EndUserIP</b>	<b>Required</b> if <b>UserCreditCard=yes</b>	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>CardType</b>	<b>Required</b> if <b>UseCreditCard=yes</b>	Type of credit card. Permitted values are <b>Visa</b> , <b>Mastercard</b> , <b>AmEx</b> , and <b>Discover</b>	20
<b>CCName</b>	<b>Required</b> if <b>UseCreditCard=yes</b>	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> if <b>UseCreditCard=yes</b>	Customer's credit card number	128

Param name	Obligation	Definition	Max size
<b>CreditCardExpMonth</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration month, in <i>MM</i> format	2
<b>CreditCardExpYear</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration year, in <i>YYYY</i> format	4
<b>CVV2</b>	Required if <b>UseCreditCard=yes</b>	Credit card verification code	4
<b>CCAddress</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing address	60
<b>CCZip</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing postal code	15
<b>CCCountry</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing country	60
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	Registrar hold setting for this domain name
<b>CCTransResult</b>	Success status for the credit card transaction
<b>OrderID</b>	Order ID, assigned by us
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query renews DNS hosting for domain **resellerdnshost.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=EXTENDDOMAINDNS&
uid=resellid&pw=resellpw&sld=resellerdnshost&tld=com&numyears=1&
RegistrantFirstName=John&RegistrantLastName=Doe&RegistrantAddress1=17462&
RegistrantCity=Redmond&RegistrantPostalCode=98052&RegistrantCountry=USA&
RegistrantPhone=+1.4255559999&RegistrantEmailAddress=john.doe@resellerdocs.com&
UseCreditCard=yes&CardType=mastercard&CCName=John+Doe&
CreditCardNumber=5555555555555555&CreditCardExpMonth=05&CreditCardExpYear=2005&
cVV2=555&ccAddress=17462&ChargeAmount=12&responsetype=xml
```

In the response, the order ID and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <CCTANSRESULT>APPROVED</CCTANSRESULT>
  <OrderID>156180311</OrderID>
  <Command>EXTENDDOMAINDNS</Command>
  <ErrCount>0</ErrCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# Forwarding

---

## Description

### Definition

Set email forwarding addresses.

### Usage

Use this command to specify forwarding addresses for email sent to the domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/MailConfig.asp?DomainNameID=152533676>

On the **e-mail settings** page, the **save changes** button calls the **Forwarding** command.

## Constraints

The query must meet the following requirements:

- The domain must be using eNom's domain name server.
- The domain must exist in the account cited in the query.
- The query must include all addresses that you want to keep. Forwarding addresses not included in the query are deleted from the account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>AddressX</b>	Required	Address to be forwarded from this domain	63
<b>ForwardToX</b>	Required	Where this address will be forwarded to	128

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Example: thisAddress@mydomain.com to be forwarded to me@myhome.com. Pass as **Address1=thisAddress** and **ForwardTo1=me@myhome.com**

## Example

The following query gives instructions that email addressed to **jane.doe@resellerdocs.com** and **john.doe@resellerdocs.com** be forwarded to **jane.doe@example.com** and **john.doe@example.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=Forwarding&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
Address1=jane.doe&ForwardTo1=jane.doe@example.com&
Address2=john.doe&ForwardTo2=john.doe@example.com&ResponseType=XML
```

The error count **0** confirms that the email forwarding instructions are successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <MailCount>2</MailCount>
  <Command>FORWARDING</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# GetAccountInfo

---

## Description

### Definition

Get account ID, password, authorization question and answer, reseller flag, and credit card agreement settings.

### Usage

Use this command to return a short list of account identification information and reseller status.

[GetAllAccountInfo](#), a similar command, returns a complete list of account information.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command runs in the background of eNom's Web site.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>UserID</b>	Current login ID
<b>Password</b>	Current account password
<b>AuthQuestionType</b>	Current authorization question
<b>AuthQuestionAnswer</b>	Current answer to the authorization question
<b>Account</b>	Account number
<b>Reseller</b>	Is this a reseller account or not
<b>AcceptTerms</b>	Returns True if the credit card agreement has been signed, False otherwise
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a limited list of account information for account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetAccountInfo&
uid=resellid&pw=resellpw&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <GetAccountInfo>
    <UserID>resellid</UserID>
    <Password>resellpw</Password>
    <AuthQuestionType>smaiden</AuthQuestionType>
    <AuthQuestionAnswer>Jones</AuthQuestionAnswer>
    <Account>217-no-0647</Account>
    <Reseller>True</Reseller>
    <AcceptTerms>True</AcceptTerms>
  </GetAccountInfo>
  <Command>GETACCOUNTINFO</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetAccountPassword

---

## Description

### Definition

Get the password for an account.

### Usage

Use this command to have the password for an account e-mailed to the contact for that account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/help/>

On the **help** page, the **Password recovery** link calls the **GetAccountPassword** command.

## Constraints

The query must meet the following requirements:

- The **AuthQuestionAnswer** value must be correct, or the e-mail containing the password will not be sent.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>LoginID</b>	<b>Required</b>	Login ID for the account for which you want the password.	16
<b>AuthQuestionAnswer</b>	<b>Required</b>	Answer to the authorization question	50

## Returned parameters and values

Param name	Definition
<b>GotAccountInfo</b>	Account information has been located in the registrar's database.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the password for subaccount **olerud**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetAccountPassword&
uid=resellid&pw=resellpw&LoginID=olerud&AuthQuestionAnswer=Jones&responsetype=xml
```

In the response, the **true** value for **GotAccountInfo** and the **0** value for **ErrCount** indicate that the query was successful. The password is sent to the registrant e-mail address almost instantly.

```
<?xml version="1.0" ?>
<interface-response>
  <GetSubAcctLogin>
    <GotAccountInfo>true</GotAccountInfo>
  </GetSubAcctLogin>
  <Command>GETACCOUNTPASSWORD</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

---

# GetAccountValidation

---

## Description

### Definition

Retrieve the authorization question and answer for a subaccount.

### Usage

Use this command to retrieve the authorization question and answer for a subaccount. Typically, you would use this command to validate the identity of a user before using the [GetAccountPassword](#) command to email their password to them.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/EditContact.asp>

In the **Login ID and Password Information** section, the **Secret Word Type** and **Secret Word** fields display the return values of the **GetAccountValidation** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The subaccount must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Login ID of the parent account	20
<b>PW</b>	Required	Password of the parent account	20
<b>LoginID</b>	Required	Login ID of the subaccount	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>AuthQuestionType</b>	The authorization question for the subaccount
<b>AuthQuestionAnswer</b>	The answer to the authorization question for the subaccount
<b>LoginID</b>	The login ID of the subaccount
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the authorization question and answer for subaccount **olerud** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getaccountvalidation&
uid=resellid&pw=resellpw&loginid=olerud&responsetype=xml
```

In the response, values for **AuthQuestionType** and **AuthQuestionAnswer** indicate that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <GetAcctValidation>
    <AuthQuestionType>Mother's Maiden Name</AuthQuestionType>
    <AuthQuestionAnswer>Smith</AuthQuestionAnswer>
    <LoginID>olerud</LoginID>
  </GetAcctValidation>
  <Command>GETACCOUNTVALIDATION</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable />
  <IsRealTimeTLD />
  <TimeDifference>+0.00</TimeDifference>
  <ExecTime>0.0390625</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

[GetAccountPassword](#)

[GetSubAccounts](#)

[GetSubaccountsDetailList](#)

---

# GetAddressBook

---

## Description

### Definition

Retrieve all contact information that has been entered for domains in this account.

### Usage

Use this command to retrieve all contact information that has been entered for domains in this account.

This command retrieves only information associated with names in this account. It does not retrieve information from subaccounts.

A typical use for this command is for accounts that offer real-time purchases, where the account contains domain names registered by many customers.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com. This command will typically be used by a domain name reseller for administrative purposes.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>PageSize</b>	Optional; default is <b>100</b>	Number of contacts to return in this response	4
<b>Page</b>	Optional; default is <b>1</b>	Which page of responses to return. For example, if <b>PageSize=100</b> and <b>Page=2</b> , the response will include the second "page" of contacts: contacts 101 through 200.	3
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Address Rec</b>	Record number for this contact, assigned dynamically when this query runs
<b>PartyID</b>	Party ID for this contact, a permanent value
<b>OrganizationName</b>	Organization name
<b>JobTitle</b>	Job title
<b>FirstName</b>	First name
<b>LastName</b>	Last name
<b>Address1</b>	Street address, first line
<b>Address2</b>	Street address, second line
<b>City</b>	City
<b>StateProvince</b>	State or province
<b>StateProvinceChoice</b>	<b>S</b> indicates the <b>StateProvince</b> value is a state; <b>P</b> indicates province
<b>PostalCode</b>	Postal code
<b>Country</b>	Country
<b>Phone</b>	Phone number
<b>PhoneExt</b>	Phone extension
<b>Fax</b>	Fax number
<b>Email</b>	Email address
<b>Count</b>	Number of contacts returned in this response (may be fewer than the <b>PageSize</b> value)
<b>TotalPages</b>	Total number of "pages" of contacts that exist for this account, given the <b>PageSize</b> value submitted in this query.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The first contact in the response will always be the Billing contact for the account. This is true regardless of the **Page** and **PageSize** values submitted in the query.
- Other than the first contact in the response, contacts are listed in the order they are retrieved from our database. No sort parameters are offered for this command.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the first 100 contacts recorded for account **resellid** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GETADDRESSBOOK&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, address records, a **Count** value, and a **TotalPages** value confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <AddressBook>
    <Address rec="0">
      <PartyId>{BB4A2DE1-6485-45CB-A4FC-EE39BA0C1629}</PartyId>

# GetAllAccountInfo

---

## Description

### Definition

Combines **GetAccountInfo**, **GetCustomerPaymentInfo**, and **GetCustomerPreferences**.

### Usage

Use this command to access all information for an account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command runs in the background of eNom's Web site.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>OrganizationName</b>	Name of organization
<b>JobTitle</b>	Job title
<b>FName</b>	First Name
<b>LName</b>	Last Name
<b>Address1</b>	Address line 1
<b>Address2</b>	Address line 2
<b>City</b>	City
<b>StateProvince</b>	State or province
<b>StateProvinceChoice</b>	State or province choice
<b>PostalCode</b>	Postal code

Param name	Definition
<b>Country</b>	Country
<b>Phone</b>	Telephone number
<b>Fax</b>	Fax number
<b>EmailAddress</b>	Email address for WhoIs
<b>EmailAddress_Contact</b>	Email address for us to contact you about your domain name account
<b>UserID</b>	Current account ID
<b>Password</b>	Current account password
<b>AuthQuestionType</b>	Current type of question setting
<b>AuthQuestionAnswer</b>	Current question answer
<b>Account</b>	Account number
<b>Reseller</b>	Is this a reseller account or not
<b>CardType</b>	Type of credit card
<b>CCName</b>	Cardholder's name
<b>CreditCardNumber</b>	Customer's credit card number
<b>CreditCardExpMonth</b>	Credit card expiration month
<b>CreditCardExpYear</b>	Credit card expiration year
<b>CVV2</b>	Credit card verification code
<b>CCAddress</b>	Credit card billing address
<b>CCZip</b>	Credit card billing postal code
<b>CCCountry</b>	Credit card billing country

# GetAllDomains

---

## Description

### Definition

Get all domain names in an account.

### Usage

Use this command to list all the domain names in an account, with their domain name IDs and expiration dates.

We recommend that you use this command only for accounts with fewer than 200 names, because longer lists can time out. For large accounts, use [GetDomains](#).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- We recommend that you use this command only for accounts with fewer than 200 names, because longer lists can time out. For large accounts, use [GetDomains](#).
- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>UseDNS</b>	Optional	Returns a list of domains that use custom (user-specified) name servers. Permitted value is <b>custom</b> .	10
<b>GetDefaultOnly</b>	Optional	Returns default name servers. Value is <b>1</b> .	1
<b>Letter</b>	Optional	Returns domains with the specified first character. Permitted values are <b>0</b> through <b>9</b> and <b>A</b> through <b>Z</b> .	1
<b>RegistrarLock</b>	Optional	Returns domains with the specified Registrar Lock status. Permitted values are <b>Locked</b> and <b>Not Locked</b> .	10
<b>AutoRenew</b>	Optional	Returns domains with the specified Auto Renew status. Permitted values are <b>Yes</b> and <b>No</b> .	3

Param name	Obligation	Definition	Max size
<b>Name</b>	Optional	Returns domains with the specified name, on record for the contact type specified in <b>ContactType</b> . Permitted values are space-separated first and last names, for example, <b>Name=John Doe</b> .	40
<b>ContactType</b>	Optional	Returns domains with the specified name, on record for the contact type specified in <b>ContactType</b> . Permitted values are <b>Registrant</b> , <b>Aux Billing</b> , <b>Technical</b> , or <b>Administrative</b> .	14
<b>NameServer</b>	Optional	Returns domains that use the specified name server. Use format <i>dns1.nameserver.com</i> .	135
UseEnomNS	Optional	Returns domains that use the specified name servers. Permitted values are Yes or No.	3
<b>ResponseType</b>	Recommended	Format of response. Options are <b>XML</b> (recommended), <b>HTML</b> , or <b>Text</b> (default).	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Name of the domain described in this node
<b>DomainNameID</b>	Database ID of this domain
<b>Expiration-Date</b>	Expiration date of this domain
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests all domains in account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetAllDomains
&uid=resellid&pw=resellpw&ResponseType=XML
```

The response lists all domain names in the account, with the ID number and expiration date for each domain:

```
<?xml version="1.0" ?>
<interface-response>
  <GetAllDomains>
    <DomainDetail>
      <DomainName>resellerdocs.com</DomainName>
      <DomainNameID>317534985</DomainNameID>
      <expiration-date>6/23/2005 6:44:19 PM</expiration-date>
    </DomainDetail>
```

```

    <DomainDetail>
      <DomainName>resellerdocs2.net</DomainName>
      <DomainNameID>317564218</DomainNameID>
      <expiration-date>6/23/2005 6:53:23 PM</expiration-date>
    </DomainDetail>
    <DomainDetail>
      <DomainName>resellerdocs3.info</DomainName>
      <DomainNameID>152533676</DomainNameID>
      <expiration-date>6/23/2005 7:15:50 PM</expiration-date>
    </DomainDetail>
    .
    .
    .
    <UserRequestStatus>DomainBox</UserRequestStatus>
  </GetAllDomains>
  <Command>GETALLDOMAINS</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>

```

# GetBalance

---

## Description

### Definition

Get account balances.

### Usage

Use this command to return the current balance on an account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount.asp>

The **Access** link calls the **GetBalance** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>Reseller</b>	Returns <b>1</b> if this is a reseller account, <b>0</b> otherwise
<b>Balance</b>	Current account balance
<b>AvailableBalance</b>	Current available balance
<b>Price</b>	Default price for names
<b>COMPrice</b>	Price for .com
<b>NETPrice</b>	Price for .net
<b>ORGPrice</b>	Price for .org

Param name	Definition
<b>CCPrice</b>	Price for .cc
<b>TVPrice</b>	Price for .tv
<b>DomainCount</b>	Current count of domains in the account
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- This command only returns the price for original purchase of domains, not transfers or renewals. For a complete list of prices, use **PE\_GETPRICING**.

## Example

The following query requests the account balance for account **resellid**, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GetBalance&
uid=resellid&pw=resellpw&responsetype=xml
```

The response lists the balance and the available balance:

```
<?xml version="1.0" ?>
<interface-response>
  <Reseller>1</Reseller>
  <Balance>3,709.20</Balance>
  <AvailableBalance>3,669.40</AvailableBalance>
  <DomainCount>74</DomainCount>
  <Command>GETBALANCE</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# GetCartContent

---

## Description

### Definition

Get the contents of the shopping cart.

### Usage

Use this command to display the contents of the shopping cart.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

<http://www.enom.com/>

The **cart** link calls the **GetCartContent** command. The command creates the list of cart contents on the **cart** page.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>ItemID</b>	Item number
<b>Description</b>	Nature of the transaction. Options are <b>Register</b> , <b>Renew</b>
<b>Years</b>	Number of years to register
<b>NameID</b>	Name ID
<b>Name</b>	Domain name
<b>StatusID</b>	Current status of the name. Value <b>A</b> indicates item is active and will be affected by future transactions, or <b>I</b> for inactive
<b>ItemPrice</b>	Item price

Param name	Definition
<b>Renew</b>	Auto-renew setting. Value <b>1</b> indicates this item is set to auto-renew, <b>0</b> indicates this item is not set to auto-renew
<b>NeedsConfig</b>	A <b>NeedsConfig</b> value of <b>1</b> indicates that the Preconfigure icon should be displayed for this cart item. This happens when the cart item is a domain name that requires preconfiguration, and the preconfiguration has not yet been done.
<b>IsMailPak</b>	An <b>IsMailPak</b> value of <b>1</b> indicates that the POP mail icon should be displayed for this cart item. This happens when the cart item is a domain name for which POP mail is available, and the user has not added the POP mail to the shopping cart.
<b>ShowWPPSLink</b>	A <b>ShowWPPSLink</b> value of <b>1</b> indicates that the Whois Privacy Protection Service (WPPS) icon should be displayed for this cart item. This happens when the cart item is a domain name for which WPPS is available, and the user has not added WPPS to the shopping cart.
<b>QtyDesc</b>	Unit by which this item is sold
<b>SubItem</b>	A <b>SubItem</b> value of <b>0</b> indicates that this item is a single line item in the shopping cart
<b>FreeTrial</b>	A <b>FreeTrial</b> value of <b>0</b> indicates that the user begins paying for this item as soon as it is purchased
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- The parameter **StatusID** returns **A** for active and will be affected by future transactions, or **I** for inactive.

## Example

The following query requests the contents of the shopping cart for account **resellid**, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GetCartContent&
uid=resellid&pw=resellpw&ResponseType=XML
```

The response indicates that the shopping cart currently contains a domain to **register (resellerdocs.us)**:

```
<?xml version="1.0" ?>
<interface-response>
  <GetCartContent>
    <item>
      <ItemID>393955</ItemID>
      <Description>Register</Description>
      <ProdType>10</ProdType>
      <Years>1</Years>
      <NameID>152556457</NameID>
      <Name>resellerdocs.us</Name>
      <StatusID>I</StatusID>
      <ItemPrice>8.95</ItemPrice>
```

```

    <Renew>0</Renew>
    <cd>
      <NeedsConfig>1</NeedsConfig>
      <IsMailPak>0</IsMailPak>
      <ShowWPPSLink>1</ShowWPPSLink>
      <p>
        <QtyDesc>Year(s)</QtyDesc>
        <SubItem>0</SubItem>
        <FreeTrial>0</FreeTrial>
      </p>
    </cd>
  </item>
</GetCartContent>
<Command>GETCARTCONTENT</Command>
<ErrCount>0</ErrCount>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>True</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<Done>true</Done>
<debug><![CDATA[]]></debug>
</interface-response>

```

# GetConfirmationSettings

---

## Description

### Definition

Retrieve the settings for email confirmations of orders.

### Usage

Use this command to retrieve the current settings for email confirmations of orders.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/ConfirmationSettings.asp>

The settings on the **Reseller Confirmation Email Settings** page are retrieved using the **GetConfirmationSettings** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>OrderConfirmation</b>	The setting for sending copies of order confirmation emails to me, when orders are placed on this account
<b>TransferOrderConfirmation</b>	The setting for sending copies of transfer request emails to me, when orders are placed on this account

Param name	Definition
<b>OrderConfirmationBCC</b>	The setting for sending copies of order confirmation emails to me, when orders are placed on a subaccount of this account
<b>TransferOrderConfirmationBCC</b>	The setting for sending copies of transfer request emails to me, when orders are placed on a subaccount of this account
<b>EmailHead</b>	If set for custom email text, the header string that will be used
<b>EmailTail</b>	If set for custom email text, the tail string that will be used
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the settings for order confirmation emails, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetConfirmationSettings&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, return values in the **ConfirmationSettings** node confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <ConfirmationSettings>
    <OrderConfirmation>True</OrderConfirmation>
    <TransferOrderConfirmation>True</TransferOrderConfirmation>
    <OrderConfirmationBCC>True</OrderConfirmationBCC>
    <TransferOrderConfirmationBCC>True</TransferOrderConfirmationBCC>
    <EmailHead>Thank you for your recent order.</EmailHead>
    <EmailTail>Thanks again for using our online services.</EmailTail>
  </ConfirmationSettings>
  <Command>GETCONFIRMATIONSETTINGS</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable />
  <IsRealTimeTLD />
  <TimeDifference>+0.00</TimeDifference>
  <ExecTime>8.203125E-02</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
```

```

# GetContacts

---

## Description

### Definition

Get all contact data for a domain name.

### Usage

Use this command to display contact information for this account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **utilities** section, the **Contact/Whols Information** link calls the **GetContacts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>BillingPartyID</b>	Party ID
<b>BillingAddress1</b>	Address 1

Param name	Definition
<b>BillingAddress2</b>	Address 2
<b>BillingCity</b>	City
<b>BillingCountry</b>	Country
<b>BillingEmailAddress</b>	Email Address
<b>BillingFax</b>	Fax
<b>BillingFirstName</b>	First Name
<b>BillingLastName</b>	Last Name
<b>BillingJobTitle</b>	Job Title
<b>BillingOrganizationName</b>	Organization Name
<b>BillingPhone</b>	Phone number
<b>BillingPostalCode</b>	Postal Code
<b>BillingStateProvince</b>	State or Province
<b>BillingFullCountry</b>	Country
<b>EPPKey</b>	Registry EPP key
<i>ExtendedAttributes</i>	Registry-specific data for some country-code TLDs
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- If there are additional contact entries, **Billing** in the above return parameter names is replaced with **REGISTRANT**, **AUXBILLING**, **TECH**, or **ADMIN**.

## Example

The following query requests the contact information for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getcontacts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response gives contact information for the registrant party and billing party, and states that no different information was provided for the auxiliary billing, technical, and administrative contacts. Where no different information is provided, these contacts default to the billing party information:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <GetContacts>
    <domainname sld="resellerdocs" tld="com" domainnameid="152533676">resellerdocs.com
    </domainname>
    <Registrant>
      <RegistrantPartyID>{F6A676E4-5BB7-453C-87A6-9BBB164318F5}
```

```

    </RegistrantPartyID>

# GetCusPreferences

---

## Description

### Definition

Retrieve global preferences for an account.

### Usage

Use this command to retrieve global preferences for an account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

On the **settings** page, many of the settings shown can be retrieved using **GetCusPreferences**.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResellerKey</b>	Optional	Reseller EC key for this PDQ or Registry Rocket site, if different from this UID	40
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DefPeriod</b>	Default period for registrations, renewals, and transfers, in years
<b>AllowDNS</b>	<b>True</b> allows name servers other than eNom's

Param name	Definition
<b>ShowPopUps</b>	<b>True</b> shows pop-up menus
<b>AutoRenew</b>	<b>True</b> automatically renews the domain 30 days before it expires
<b>RegLock</b>	<b>True</b> requires the account holder's permission to transfer the domain to another registrar
<b>AutoPakRenew</b>	<b>True</b> automatically renews POP paks 30 days before they expire.
<b>UseDNS</b>	<b>True</b> uses eNom's name servers
<b>ResellerStatus</b>	Is this a reseller account?
<b>RenewalSetting</b>	<b>0</b> indicates no email; <b>1</b> indicates send notice; <b>2</b> indicates contact and charge customer
<b>RenewalBCC</b>	<b>1</b> indicates send copy of email to reseller; <b>0</b> indicates no copy to reseller
<b>RenewalURLForward</b>	<b>True</b> automatically renews URL forwarding 30 days before the URL forwarding subscription expires.
<b>RenewalEMailForward</b>	<b>True</b> automatically renews email forwarding 30 days before the email forwarding subscription expires.
<b>HostName</b>	Name of this default host record
<b>Address</b>	Address of this default host record
<b>RecordType</b>	Record type of this default host record
<b>DefaultHostRecordOwn</b>	Is this account using its own set of default host records?
<b>UseOurDNS</b>	Does this account use eNom's DNS servers by default?
<b>DNSX</b>	Default DNS server X for this domain name account
<b>AcceptTerms</b>	<b>True</b> indicates this account has signed a credit-card processing agreement with us
<b>URL</b>	URL for reseller site listed in email notices
<b>ParentAccount</b>	This account's parent
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the account settings for **resellid** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GetCusPreferences&
uid=resellid&pw=resellpw&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <CustomerPrefs>
    <DefPeriod>4</DefPeriod>
```

```

    <AllowDNS>False</AllowDNS>
    <ShowPopups>False</ShowPopups>
    <AutoRenew>False</AutoRenew>
    <RegLock>False</RegLock>
    <AutoPakRenew>False</AutoPakRenew>
    <UseDNS>True</UseDNS>
    <ResellerStatus />
    <RenewalSetting>0</RenewalSetting>
    <RenewalBCC>0</RenewalBCC>
    <RenewalURLForward>False</RenewalURLForward>
    <RenewalEmailForward>False</RenewalEmailForward>
  </CustomerPrefs>
  <CustomerInformation>
    <AcceptTerms>True</AcceptTerms>
    <URL />
  </CustomerInformation>
  <Command>GETCUSPREFERENCES</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>0</IsLockable>
  <IsRealTimeTLD>0</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>

```

# GetCustomerDefinedData

---

## Description

### Definition

Retrieve customer-defined data.

### Usage

Use this command to retrieve custom data.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ObjectID</b>	Required	Object ID number, an integer assigned when this customer-defined field was first established.	2
<b>Type</b>	Required	Object type. Options are: 1 Data pertaining to an account 2 Data pertaining to a domain 3 Data pertaining to an order	1
<b>SLD</b>	Required if Type=2	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required if Type=2	Top-level domain name (extension)	15

Param name	Obligation	Definition	Max size
<b>OrderID</b>	<b>Required</b> if <b>Type=3</b>	Order ID, which you can retrieve using <a href="#">GetDomainStatus</a>	11
<b>Key</b>	<b>Required</b>	Title of this entry, or label describing this data field	50
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Value</b>	Content of this entry
<b>DisplayFlag</b>	Visibility to subaccount. Options are: <b>0</b> This entry not visible when logged on using subaccount ID <b>1</b> This entry is visible when logged on using subaccount ID
<b>EnteredBy</b>	Name of the person adding this entry
<b>LastUpdatedDate</b>	Last date on which this entry was changed
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the value for the customer-defined data titled **FavoriteCuisine** for account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getcustomerdefineddata&
uid=resellid&pw=resellpw&ObjectID=1&Type=1&Key=FavoriteCuisine&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <CustomerData>
    <Value>Italian</Value>
    <DisplayFlag>True</DisplayFlag>
    <EnteredBy>John</EnteredBy>
    <LastUpdatedDate>7/7/2003 5:46:10 PM</LastUpdatedDate>
  </CustomerData>
  <Command>GETCUSTOMERDEFINEDDATA</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
```

```
<Site>enom</Site>
<IsLockable>True</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# GetCustomerPaymentInfo

---

## Description

### Definition

Retrieve customer payment information.

### Usage

Use this command to retrieve customer payment information.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/EditContact.asp>

The **Credit Card Information** box contains the return values supplied by the **GetCustomerPaymentInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>CCName</b>	Credit card holder's name
<b>CCNumber</b>	Credit card number
<b>CCType</b>	Credit card type
<b>CCMonth</b>	Credit card expiration month

Param name	Definition
<b>CCYear</b>	Credit card expiration year
<b>CCAddress</b>	Credit card billing address street address
<b>CCVV2</b>	Credit card CVV2 number
<b>CCZip</b>	Credit card billing address postal code
<b>CCCity</b>	Credit card billing address city
<b>CCStateProvince</b>	Credit card billing address province
<b>CCCountry</b>	Credit card billing address country
<b>CCPhoneDial</b>	Telephone country code
<b>CCPhone</b>	Telephone number with area code
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the payment information on record for an account, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetCustomerPaymentInfo&uid=resellid&pw=resellpw&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <GetCustomerPaymentInfo>
    <CCName>John Doe</CCName>
    <CCNumber>*****5215</CCNumber>
    <CCType>MASTERCARD</CCType>
    <CCMonth>11</CCMonth>
    <CCYear>2005</CCYear>
    <CCAddress>17462</CCAddress>
    <CCVV2 />
    <CCZip>98052</CCZip>
    <CCCity>Hometown</CCCity>
    <CCStateProvince>WA</CCStateProvince>
    <CCCountry>US</CCCountry>
    <CCPhoneDial>1</CCPhoneDial>
    <CCPhone>5555559999</CCPhone>
  </GetCustomerPaymentInfo>

# GetDNS

---

## Description

### Definition

Get the nameserver settings for a domain name.

### Usage

Use this command to display name servers.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20
SLD	Required	Second-level domain name (for example, enom in enom.com)	63
TLD	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
RegistrarHold	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
NSCount	Number of DNS entries
DNSX	Name server X. Response is indexed X if <b>ResponseType=Text</b> or <b>HTML</b> .
UseDNS	Which name servers a domain is using. <b>Default</b> indicates our name servers
NSStatus	Returns <b>yes</b> if using registrar's name servers.
Command	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the domain name servers for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDNS&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <dns>ns1.name-services.com</dns>
  <dns>ns2.name-services.com</dns>
  <dns>ns3.name-services.com</dns>
  <dns>ns4.name-services.com</dns>
  <dns>ns5.name-services.com</dns>
  <UseDNS>ours</UseDNS>
  <NSStatus>Yes</NSStatus>
  <RRPCode />
  <RRPText />
  <Command>GETDNS</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetDNSStatus

---

## Description

### Definition

Get the nameserver status for a domain name.

### Usage

Use this command to determine what DNS this domain uses. The query returns values only if the domain uses eNom servers.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20
SLD	Required	Second-level domain name (for example, enom in enom.com)	63
TLD	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
RegistrarHold	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
UseDNS	Which name servers a domain is using. <b>Default</b> indicates our name servers.
NSStatus	Returns <b>yes</b> if using registrar's name servers.
Command	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the DNS status of **resellerdocs.com** -- that is, whether the domain uses its registrar's servers. The query also requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDNSStatus&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The NS status **Yes** indicates that the domain uses the registrar's name servers:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <UseDNS>ours</UseDNS>
  <NSStatus>Yes</NSStatus>
  <Command>GETDNSSTATUS</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

---

# GetDomainCount

---

## Description

### Definition

Get the count for registered, hosted, processing, watch list, cart item and expired domains.

### Usage

Use this command to return the number of domains in each category.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

**GetDomainCount** is not implemented on eNom.com, but clicking the **log-in** button returns information that includes counts of the domains in each category.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>RegisteredCount</b>	Number of registered domain names.
<b>HostCount</b>	Number of hosted domain names.
<b>ExpiredDomainsCount</b>	Number of expired domain names.
<b>ProcessCount</b>	Number of domain names that are still processing.
<b>KeywordCount</b>	Number of keywords (obsolete feature).
<b>WatchlistCount</b>	Number of domain names in the watchlist.
<b>CartItemCount</b>	Number of items in the shopping cart.

Param name	Definition
<b>ExpiringCount</b>	Number of expiring domain names.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1</b> to <i>ErrCount)</i> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a tally of domains in account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainCount&
uid=resellid&pw=resellpw&ResponseType=XML
```

The response indicates that the account has **72** registered and **2** hosted domains:

```
<?xml version="1.0" ?>
<interface-response>
  <RegisteredCount>72</RegisteredCount>
  <HostCount>2</HostCount>
  <ExpiredDomainsCount>0</ExpiredDomainsCount>
  <ProcessCount>0</ProcessCount>
  <KeywordCount>0</KeywordCount>
  <WatchlistCount>0</WatchlistCount>
  <CartItemCount>2</CartItemCount>
  <ExpiringCount>0</ExpiringCount>
  <Command>GETDOMAINCOUNT</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>

# GetDomainExp

---

## Description

### Definition

Get domain expiration date.

### Usage

Use this command to display the expiration date for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/>

**GetDomainExp** is not implemented on eNom.com, but clicking the **domain names** link on the **my enom** page returns information that includes expiration dates.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>ExpirationDate</b>	Expiration date for the domain registration.
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the expiration date for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainExp&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The response indicates that the expiration date for the domain is **6/25/2012**:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <ExpirationDate>6/25/2012 4:20:24 PM</ExpirationDate>
  <Command>GETDOMAINEXP</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>

# GetDomainInfo

---

## Description

### Definition

Get information about a single domain name.

### Usage

Use this command to display current information about a single domain name. This command also retrieves the DomainNameID value, which is required by some other commands in our API.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainManager.asp>

On the **my domains** page, clicking a link in the **Domain Name** column calls the **GetDomainInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20
SLD	Required	Second-level domain name (for example, enom in enom.com)	63
TLD	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
RegistrarHold	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
SLD	Second-level domain name (for example, enom in enom.com)

Param name	Definition
<b>TLD</b>	Top-level domain name (extension)
<b>DomainNameID</b>	ID number of this individual domain
<b>Multy-LangSLD</b>	Is this a multi-language SLD?
<b>Expiration</b>	Expiration date of this domain registration
<b>Registrar</b>	Registrar of this domain
<b>RegistrationStatus</b>	Registration status of this domain
<b>Purchase-Status</b>	Purchase status of this domain
<b>Party-ID</b>	Party ID of the account in which this domain is registered
<b>Belongs-To</b>	Login ID of the account in which this domain is registered
<b>Entry Name</b>	Name of the product or service described in this node
<b>Changable</b>	Can this service be changed?
<b>Service</b>	Setting for the service. Permitted values are: <b>DNSServer</b> (which domain name servers): <b>1006</b> use our name servers <b>1012</b> use user-specified domain servers, including none <b>DNSSettings</b> (host records): <b>1021</b> host records <b>WSB</b> (Web site services): <b>1060</b> no Web site building or hosting services <b>1063</b> Web Site Builder <b>1066</b> Web site hosting accounts <b>EmailSet</b> (Email services): <b>1048</b> no email <b>1051</b> email forwarding (to a POP or WebMail address) <b>1054</b> user (mail server name required) <b>1105</b> user simplified (mail server's IP address required) <b>1114</b> POP3/WebMail plus email forwarding <b>WPPS</b> (ID Protect Whois Privacy Protection): <b>1120</b> WhoIs information is masked <b>1123</b> WhoIs information is viewable <b>TrafficVista</b> (traffic monitoring) <b>1151</b> enabled <b>1153</b> disabled <b>Parking</b> (parking text): <b>1030</b> disabled <b>1033</b> enabled <b>Messaging</b> (NameMyPhone): <b>1087</b> disabled <b>1090</b> enabled <b>Map</b> (NameMyMap): <b>1108</b> disabled <b>1111</b> enabled
<b>Service Changable</b>	Can this service be toggled on or off, or switched?
<b>ConfigurationChangable</b>	Is this a configurable product or service?
<b>Name</b>	Name of this host record
<b>Type</b>	Type of product, service, or host record
<b>Address</b>	Host record address
<b>MXPref</b>	Priority value of this host record
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests domain information—status and services— for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainInfo&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <GetDomainInfo>
    <domainname
      sld="resellerdocs" tld="com" domainnameid="152533676">resellerdocs.com
    </domainname>
    <multy-langSLD />
    <status>
      <expiration>6/10/2013 3:56:56 PM</expiration>
      <registrar>eNom, Inc.</registrar>
      <registrationstatus>Registered</registrationstatus>
      <purchase-status>Paid</purchase-status>
      <belongs-to
        party-id="{BB4A2DE1-6485-45CB-A4FC-EE39BA0C1629}">resellid
      </belongs-to>
    </status>
    <services>
      <entry name="dnsserver">
        <ourDNS value="YES" isDotName="NO" />
        <service changable="1">1006</service>
        <configuration changable="0" type="dns">

# GetDomainMap

## Description

### Definition

Get **name my map** settings.

### Usage

Use this command to display settings, for a single domain, for the **name my map** service.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?domainnameid=152533676>

If the **name my map** service is enabled, clicking the **configure** button calls the **GetDomainMap** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Host-Name</b>	Name for user's host
<b>Address</b>	Address for the map
<b>City</b>	City for the map

Param name	Definition
<b>StateProvince</b>	State or province for the map
<b>PostalCode</b>	Postal code for the map
<b>Country</b>	Country for the map
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the Name My Map data for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainMap&
UID=resellid&PW=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The response provides the Name My Map data:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <GetDomainMap>
    <domainname sld="resellerdocs" tld="com" id="152533676">
      resellerdocs.com
    </domainname>
    <configuration>
      <map>
        <host-name>
          <![CDATA[ dns1.name-services.com ]]>
        </host-name>
        <address>
          <![CDATA[ 100 Main St. ]]>
        </address>
        <city>
          <![CDATA[ Townsville ]]>
        </city>
        <stateprovince>
          <![CDATA[ WA ]]>
        </stateprovince>
        <postalcode>
          <![CDATA[ 99999 ]]>
        </postalcode>
        <country>
          <![CDATA[ US ]]>
        </country>
      </map>
    </configuration>
  </GetDomainMap>
```

```
<Command>GETDOMAINMAP</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>eNom</Site>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

---

# GetDomainNameID

---

## Description

### Definition

Retrieves the ID number for a domain.

### Usage

In some API commands, you can use the domain name ID instead of the SLD and TLD.

Our database associates a unique ID with each domain name, and all activity in the database is tracked by ID rather than by domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainRRP</b>	Processor identifier of the registrar which manages the domain
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.

Param name	Definition
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>DomainNameID</b>	Identification number of this domain name
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the domain name ID for **resellerdocs.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getdomainnameid&uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The successful response returns the domain name ID:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <SLD>resellerdocs</SLD>
  <TLD>com</TLD>
  <DomainNameID>152533676</DomainNameID>
  <Command>GETDOMAINNAMEID</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

# GetDomainPhone

---

## Description

### Definition

Get **name my phone** settings.

### Usage

Use this command to display the current **name my phone** settings.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?domainnameid=152533676>

If **name my phone** service is enabled, the **configure** button calls the **GetDomainPhone** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled
<b>phone-number</b>	Phone number

Param name	Definition
<b>service-email</b>	Service email address
<b>device-email</b>	Complete device email address (phone number and service email combined)
<b>host-name</b>	Host name for DNS entry (default is <b>phone</b> )
<b>email-alias</b>	Flag to set up Email Forwarding alias - <b>True</b> (1) or <b>False</b> (0)
<b>cc-email1</b>	CC to email #1
<b>cc-email2</b>	CC to email #2
<b>cc-email3</b>	CC to email #3
<b>max-chars</b>	Maximum number of characters allowed per message
<b>page-count</b>	Total number of pages sent (not implemented)
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the Name My Phone data for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainPhone&
UID=resellid&PW=resellpw&sld=resellerdocs&tld=com&ResponseType=XML
```

The response provides the current Name My Phone information:

```
<?xml version="1.0" ?>

# GetDomains

## Description

### Definition

Get a single page of domain names with the ability to load the next or previous page of names.

### Usage

Use this command to list a single page of domains in an account. **GetDomains** is the recommended command for large accounts. [GetAllDomains](#), a similar command, returns the complete list of domain names in an account but can time out for accounts with more than 200 domain names.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/>

In the **my enom** section, the **x domain names** link calls the **GetDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Tab</b>	Optional; default is <b>IOwn</b>	The type of domains to return. Permitted values are: <b>IOwn</b> current names in this account <b>Sub_IOwn</b> names in retail subaccounts <b>WatchList</b> names in this account's watchlist <b>IHost</b> DNS hosting names, this account <b>ExpiringNames</b> names nearing expiration <b>ExpiredDomains</b> expired but able to renew <b>RGP</b> RGP and Extended RGP names <b>Promotion</b> names on promotional basis	10

Param name	Obligation	Definition	Max size
<b>DaysToExpired</b>	Optional; works with <b>Tab=ExpiringNames</b>	Return names that expire within this number of days, whether they are set to auto-renew or not	4
<b>RegStatus</b>	Optional with <b>Tab=Sub_IOwn</b> ; default is <b>Registered</b>	The type of domains to return for a subaccount. Permitted values are <b>Registered</b> (the default) and <b>Expired</b> .	10
<b>Start</b>	Optional; default is <b>1</b>	Return sets of 25 records, starting with this number and sorted by domain name. For example, <b>Start=26</b> returns the 26th through 50th names from a numero-alphabetically sorted list.	4
<b>OrderBy</b>	Optional	The order to return the results. Permitted values are <b>SLD</b> , <b>TLD</b> , <b>DNS</b> , and <b>ExpirationDate</b> .	15
<b>StartLetter</b>	Optional	Return names that start with this letter	1
<b>Domain</b>	Optional	Return names that match this name. Use format <i>SLD.TLD</i>	60
<b>GetCustomerType</b>	Optional	Return the account type for this subaccount. Permitted values are <b>On</b> and <b>Off</b> .	3
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainNameIDX</b>	Domain name ID. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>SLDX</b>	Second-level domain name (for example, enom in enom.com). Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>TLDX</b>	Top-level domain name (extension). Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>NS-StatusX</b>	Name server status. <b>YES</b> indicates this domain uses our name servers. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Expiration-DateX</b>	Expiration date of the domain registration. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Auto-RenewX</b>	Auto-renew setting. Return values are <b>Yes</b> or <b>No</b> . Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>WPPSStatusX</b>	WhoIs privacy protection setting. Return values are <b>Enabled</b> or <b>Disabled</b> . Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>RRProcessorX</b>	RR processor. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.

- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of domains and basic information about them for account **resellid**, and requests the response in **XML** format. This command returns 25 domains at a time. Because it does not specify which domain to start with, the response by default starts with the first domain (sorting by domain name: numbers first, then letters):

```
http://resellertest.enom.com/interface.asp?command=GetDomains&
uid=resellid&pw=resellpw&ResponseType=XML
```

The response lists the first 25 domains in account **resellid**, starting with **resellerdocs.com** and **resellerdocs3.info**. It also provides some summary information about the total contents of the account:

```
<?xml version="1.0" ?>
<interface-response>
  <GetDomains>
    <tab>iown</tab>
    <domain-list type="Registered">
      <domain>
        <DomainNameID>152533676</DomainNameID>
        <sld>resellerdocs</sld>
        <tld>com</tld>
        <Renew>Yes</Renew>
        <expiration-date>6/25/2012</expiration-date>
      </domain>
      <domain>
        <DomainNameID>152533677</DomainNameID>
        <sld>resellerdocs3</sld>
        <tld>info</tld>
        <Renew>Yes</Renew>
        <expiration-date>6/25/2004</expiration-date>
      </domain>
      .
      .
      .
    </domain-list>
    <EndPosition>25</EndPosition>
    <PreviousRecords>0</PreviousRecords>
    <NextRecords>26</NextRecords>
    <OrderBy />
    <Result>True</Result>
    <StartPosition>1</StartPosition>
    <DomainCount>72</DomainCount>
    <TotalDomainCount>72</TotalDomainCount>
    <StartLetter />
  </GetDomains>
  <Command>GETDOMAINS</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>

# GetDomainServices

---

## Description

### Definition

Retrieve the settings for domain services and value-added services for a domain.

### Usage

Use this command to retrieve information about email forwarding, URL forwarding, and other domain and value-add services for a domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel**, **change** and **configure** buttons give access to current settings and the ability to change value-add settings.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>WebSite</b>	Web site setting
<b>Phone</b>	Name-My-Phone setting
<b>IPResolver</b>	Setting for resolving dynamic IP addresses
<b>Map</b>	Name-My-Map setting
<b>DomainNameID</b>	ID number for this domain, from our internal records
<b>EMailForwarding</b>	Email forwarding setting for this domain
<b>EmailForwardExpDate</b>	Expiration date for email forwarding
<b>EMailAutoRenew</b>	Auto-renew setting for email forwarding
<b>URLForwarding</b>	URL forwarding setting for this domain
<b>URLForwardExpDate</b>	Expiration date for URL forwarding
<b>URLAutoRenew</b>	Auto-renew setting for URL forwarding
<b>EMailForwardingPrice</b>	Price for email forwarding
<b>URLForwardingPrice</b>	Price for URL forwarding
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the domain and value-add service settings for **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainServices&uid=resellid&pw=resellpw&responsetype=xml&sld=resellerdocs&tld=com
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <domainservices>
    <website>0</website>
    <phone>False</phone>
    <ipresolver>0</ipresolver>
    <map>False</map>
    <domainnameid>152551776</domainnameid>
    <valueadd>
      <EmailForwarding>0</EmailForwarding>
      <EmailForwardExpDate />
      <EmailAutoRenew />
      <URLForwarding>0</URLForwarding>
```

```
<URLForwardExpDate />
<URLAutoRenew />
<emailForwardingPrice>0.00</emailForwardingPrice>
<urlForwardingPrice>0.00</urlForwardingPrice>
</valueadd>
</domainservices>
<Command>GETDOMAINSERVICES</Command>
<ErrCount>0</ErrCount>
<MinPeriod>1</MinPeriod>
<MaxPeriod>10</MaxPeriod>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>0</IsLockable>
<IsRealTimeTLD>0</IsRealTimeTLD>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# GetDomainSLDTLD

---

## Description

### Definition

Retrieve the domain name (SLD and TLD).

### Usage

Use this command when you have the domain name ID and want the domain name (SLD and TLD).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DomainNameID</b>	Required	Domain name ID	11
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainRRP</b>	Registrar identifier
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>DomainNameID</b>	Domain name ID

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the SLD and TLD for domain name ID **152533676** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getdomainsldtld&
uid=resellid&pw=resellpw&domainnameid=152533676&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <SLD>resellerdocs</SLD>
  <TLD>com</TLD>
  <DomainNameID>152533676</DomainNameID>
  <Command>GETDOMAINSLDTLD</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

[GetDomainInfo](#)  
[GetDomainNameID](#)

# GetDomainStatus

## Description

### Definition

Check the registration status of TLDs that do not register in real time.

### Usage

Use this command to check the status of domains that do not register in real time (including .ca, .co.uk, .org.uk, and others). Because of the delay inherent in the non-real-time registrations, wait at least five minutes after your transaction to run this command, and run it at intervals of five minutes or longer. This command runs more quickly than a similar command, [StatusDomain](#).

Use this command to retrieve the most recent order ID for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>OrderID</b>	Recommended	Order ID of the most recent transaction for this domain	15
<b>OrderType</b>	Required for types other than Purchase	Type of order. Options are <b>Purchase</b> (default), <b>Transfer</b> , or <b>Extend</b>	10
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Domain name
<b>InAccount</b>	Status of the domain in our database: <b>0</b> not in our database <b>1</b> in our database and in the account cited in this query <b>2</b> in our database but in a different account than the one cited in this query
<b>StatusDesc</b>	More detailed explanation of the <b>InAccount</b> value
<b>ExpDate</b>	Expiration date of the domain registration
<b>OrderID</b>	Order identification number of the most recent transaction for this domain
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the status of domain **resellerdocs.co.uk** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GETDOMAINSTATUS&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=co.uk&
orderID=156162742&ordertype=purchase&responsetype=xml
```

In the response, the **InAccount** value **0** and the **StatusDesc** value **Awaiting Registry Response** confirm that the order is currently being processed at the co.uk Registry:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainStatus>
    <DomainName>resellerdocs.co.uk</DomainName>
    <InAccount>0</InAccount>
    <StatusDesc>Awaiting Registry Response</StatusDesc>
    <OrderID>156162742</OrderID>
  </DomainStatus>
  <Command>GETDOMAINSTATUS</Command>
  <ErrCount>0</ErrCount>
  <Server>Test1</Server>
  <Site>enom</Site>
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>False</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# GetDomainSubServices

---

## Description

### Definition

Get current settings for domain services (active or inactive)

### Usage

Use this command to get which services are enabled to control whether to present the user the ability to get or update information related to the service. (eg. Host or email forwarding records). For some services, you can get more detailed information using the [GetDomainServices](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

`http://resellertest.enom.com/interface.asp?command=GetDomainSubServices&uid=yourloginid&pw=yourpassword&sld=domain&tld=com`

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>EmailForwarding</b>	<b>True</b> , <b>False</b> or empty
<b>HostRecords</b>	<b>True</b> , <b>False</b> or empty
<b>SetDomainServices</b>	<b>Successful</b> or <b>Failed</b>
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets the subservices of a domain and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GetDomainSubServices&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The error count value of **0** confirms that hosts have been set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <DomainServices>
    <EmailForwarding>True</EmailForwarding>
    <HostRecords>True</HostRecords>
  </DomainServices>
  <Command>GETDOMAINSUBSERVICES</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev</Server>
  <Site>enom</Site>
  <Done>true</Done>
</interface-response>
```

# GetDotNameForwarding

---

## Description

### Definition

Retrieve the current address for email forwarding by the .name Registry.

### Usage

Use this command to retrieve the email forwarding address used by the .name Registry for forwarding email addressed to this domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

On the **domain names** menu, click **my domains**, and then click a .name domain.

In the **email settings** box of the **domain control panel**, the **.name email** button calls the **GetDotNameForwarding** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must be a .name domain.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain. For this command, value must be name.	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainNameID</b>	Domain name ID, eNom's internal accounting number
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain. For this command, value is <b>name</b> .
<b>Status</b>	Status
<b>Address</b>	Email address to which email addressed to this domain is forwarded.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the email forwarding address for **john.doe.name** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getdotnameforwarding&uid=resellid&pw=resellpw&sld=john.doe&tld=name&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <dotnameforwarding>
    <domainname domainnameid="157171163" sld="john.doe" tld="name" />
    <status>1</status>
    <address>john.doe@resellerdocs.com</address>
  </dotnameforwarding>
  <Command>GETDOTNAMEFORWARDING</Command>
  <ErrCount>0</ErrCount>
  <Server>Reseller5</Server>
  <Site>enom</Site>
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

[SetDotNameForwarding](#)

---

# GetExpiredDomains

---

## Description

### Definition

Retrieve a list of an account's domains that are in expired, RGP, and Extended RGP status.

### Usage

Use this command to retrieve a list of expired, RGP, and Extended RGP names in the account specified in the query string. Typically, a reseller will use this information to determine which command to use to reactivate a domain, and what price they will charge.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainManager.asp?tab=iown>

Clicking the **expired** or **redemption** tabs call the **GetExpiredDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Domain name
<b>DomainNameID</b>	Domain name ID number, from our database
<b>Status</b>	Expiration status of this domain

Param name	Definition
<b>Expiration-Date</b>	Expiration date of this domain
<b>LockStatus</b>	Registrar lock status of this domain
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the expired domains in account **resellid**; identifies them as **Expired**, **RGP**, or **Extended RGP** status; and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getexpireddomains&
uid=resellid&pw=resellpw&responsetype=xml
```

The response is as follows:

# GetExtAttributes

---

## Description

### Definition

This command retrieves the extended attributes for a country code TLD (required parameters specific to the country code).

### Usage

Use this command to determine whether a country code TLD requires extended attributes, and what they are.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The country code must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ID</b>	ID number for our internal use
<b>Name</b>	Parameter name
<b>Value</b>	Parameter value for the query string
<b>Title</b>	Short definition of the parameter value

Param name	Definition
<b>Application</b>	Application. <b>2</b> indicates Registrant contact.
<b>UserDefined</b>	User must supply the value for this parameter from outside sources
<b>Required</b>	Obligation of this parameter. <b>0</b> indicates optional, <b>1</b> indicates required, <b>2</b> indicates a child attribute/parameter that is required for some values of the parent. Values that require the child are indicated in the <b>&lt;Requires&gt;</b> node of the parent.
<b>Description</b>	Extended definition of the parameter value
<b>IsChild</b>	If <b>IsChild=1</b> , this parameter is the child of another extended attribute.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the extended attributes for the **.us** TLD and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getextattributes&
uid=resellid&pw=resellpw&tld=us&responsetype=xml
```

The response indicates that the extended attributes for **.us** are **us\_nexus**, **global\_cc\_us**, and **us\_purpose**:

```
<?xml version="1.0" ?>

# GetExtendInfo

---

## Description

### Definition

Get extension (renewal) information.

### Usage

Use this command to display information about the expiration date of a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel** page, the **add years** button calls the **GetExtendInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Expiration</b>	Current expiration date.
<b>MaxExtension</b>	Maximum # of years that can be added.

Param name	Definition
<b>CCAuthorized</b>	Credit card transaction successfully authorized.
<b>Price</b>	Price for one-year extension for this type of TLD.
<b>Balance</b>	Current balance in this account.
<b>AvailableBalance</b>	Available balance in this account.
<b>DefPeriod</b>	Default renewal period for domain name registrations
<b>AllowDNS</b>	<b>True</b> allows domain name servers other than eNom's
<b>ShowPopups</b>	<b>True</b> shows popup menus
<b>AutoRenew</b>	<b>True</b> automatically renews the domain registration 30 days before it expires
<b>RegLock</b>	<b>True</b> requires the account holder's permission to transfer the domain to another registrar
<b>AutoPakRenew</b>	<b>True</b> automatically renews POP paks 30 days before they expire
<b>UseDNS</b>	<b>True</b> uses eNom's name servers
<b>ResellerStatus</b>	Reseller status of this account
<b>RenewalSetting</b>	<b>0</b> Send no renewal reminder when domain expiration approaches <b>1</b> Send renewal reminder by email <b>2</b> Contact customer, renew registration, and charge account
<b>RenewalBCC</b>	<b>1</b> Send blind carbon copy of renewal email to reseller <b>0</b> Do not send blind carbon copy to reseller
<b>RenewalURLForward</b>	<b>True</b> automatically renews URL forwarding 30 days before the subscription expires
<b>RenewalEmailForward</b>	<b>True</b> automatically renews email forwarding 30 days before the subscription expires
<b>HostNameX</b>	Name of default host record
<b>AddressX</b>	Address of default host record
<b>RecordTypeX</b>	Default host record type
<b>DefaultHostRecordOwn</b>	Indicates whether this domain is associated with a Web hosting account
<b>AcceptTerms</b>	<b>True</b> has signed a credit card processing agreement with eNom
<b>URL</b>	URL for reseller site, used in email notices
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests renewal information for **resellerdocs.com** and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getextendinfo&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Expiration>06/25/2004</Expiration>
  <MaxExtension>8</MaxExtension>
  <CCAuthorized>True</CCAuthorized>
  <Price>8.95</Price>
  <Balance>39.80</Balance>
  <AvailableBalance>39.80</AvailableBalance>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>GETEXTENDINFO</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetForwarding

---

## Description

### Definition

Get email forwarding records for a domain name.

### Usage

Use this command to display email forwarding records for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?domainnameid=152533676>

On the **domain control panel**, if the **e-mail settings** service is set to **e-mail forwarding**, the **configure** button calls the **GetForwarding** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must use eNom's domain name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>GetDefaultOnly</b>	Optional	If this is set to <b>1</b> , extra blank input records are returned for user input on the email forwarding form. Primarily used in XML output.	1

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>EmailCount</b>	Number of email forwarding records
<b>UserNameX</b>	Alias name to forward. Indexed $X = 1$ to <i>EmailCount</i> when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>ForwardToX</b>	Email address to forward the alias to. Indexed $X = 1$ to <i>EmailCount</i> when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests e-mail forwarding information for **resellerdocs.com** and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getforwarding&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <eforward>
    <alias>jane.doe</alias>
    <forward-to>jane.doe@example.com</forward-to>
  </eforward>
  <eforward>
    <alias>john.doe</alias>
    <forward-to>john.doe@example.com</forward-to>
  </eforward>
  <EmailCount>2</EmailCount>
  <Command>GETFORWARDING</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>

# GetGlobalChangeStatus

---

## Description

### Definition

Retrieve a list of IDs for instances in which a global edit command was run on this account.

### Usage

Use this command to retrieve ResponseIDs for global edits performed on domains in this account. Commonly, you will run this command to get a ResponseID in order to run the [GetGlobalChangeStatusDetail](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/globaledit.asp>

The **Click here to view the status and history of your previous global edits** link calls the **GetGlobalChangeStatus** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RequestID</b>	ID number of the request for the change described in this node
<b>ReqDate</b>	Time-stamp for this request
<b>ReqTypeDesc</b>	Description of the requested change

Param name	Definition
<b>ReqStatusDesc</b>	Status of the requested change
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query Retrieves the global changes that have been requested in account **resellid** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetGlobalChangeStatus&
UID=resellid&PW=resellpw&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <GetGlobalChangeStatus>
    <GlobalStatusInfo>
      <RequestID>8332</RequestID>
      <ReqDate>9/2/2003 3:51:47 PM</ReqDate>

```

## Related commands

[GetGlobalChangeStatusDetail](#)

---

# GetGlobalChangeStatusDetail

---

## Description

### Definition

Retrieve a list of the domains affected by the specified global update, and the success status for each.

### Usage

Use this command to check the success of global changes.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/domains/globalaccountstatus.asp>

Clicking any of the **RequestID** links calls the **GetGlobalChangeStatusDetail** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The ResponseID must match a global update that was performed in this account.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>RequestID</b>	Required	ID number for the global change to one parameter. Use the <a href="#">GetGlobalChangeStatus</a> command to retrieve this value.	6
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Domain name
<b>StatusDesc</b>	Status of this change to this domain

Param name	Definition
<b>ErrorDesc</b>	Description of any error encountered during this change
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the status for each domain affected by global change **RequestID=8331** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetGlobalChangeStatusDetail&
UID=resellid&PW=resellpw&RequestID=8331&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <GetGlobalChangeStatusDetail>
    <GlobalStatusDetail>
      <DomainName>TestSLD1.biz</DomainName>

## Related commands

[GetGlobalChangeStatus](#)

# GetHosts

## Description

### Definition

Get host records for a domain name.

### Usage

Use this command to return all host records. [GetRegHosts](#), a similar command, does not return mail host records.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel**, the **DNS settings (zone file)** box retrieves its information using the **GetHosts** command. Clicking the **configure** button brings up the **GetHosts** command in editable form.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must use eNom's domain name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Name</b>	Host name of record.

Param name	Definition
<b>Type</b>	Record Type. Returns <b>A</b> , <b>URL</b> , <b>MX</b> , <b>MXE</b> , <b>CNAME</b> or <b>FRAME</b> .
<b>MXPref</b>	Preference level: the higher this value, the higher priority this service. Default value is <b>10</b> .
<b>Address</b>	Address. Can be an IP for record types <b>A</b> , <b>MXE</b> and <b>FRAME</b> only. Record types <b>URL</b> and <b>FRAME</b> can be a full URL. Record types <b>MX</b> , <b>URL</b> , <b>FRAME</b> and <b>CNAME</b> can be a fully qualified domain name.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests all host records, including mail hosts, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=gethosts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responseType=xml
```

The response lists the hosts:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Website>0</Website>
  <host>
    <name>www</name>
    <type>A</type>
    <address>127.0.0.1</address>
  </host>
  <host>
    <name>@</name>
    <type>A</type>
    <address>127.0.0.1</address>
  </host>
  <host>
    <name>mail</name>
    <type>MXE</type>
    <mxpref>10</mxpref>
    <address>127.0.0.1</address>
  </host>
  <Command>GETHOSTS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>

# GetIPResolver

## Description

### Definition

Get IP Resolver settings.

### Usage

Use this command to retrieve the NameMyComputer settings for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel** page, the **GetIPResolver** command provides the content of the **name my computer** box.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>IP-Resolver-ID</b>	Currently <b>1240</b> for ICQ.
<b>Host-Name</b>	Host name for the service.

Param name	Definition
<b>Client-Service</b>	Currently only service type <b>1</b> for ICQ.
<b>Client-User-ID</b>	Client ID (ICQ #).
<b>ID</b>	Option ID for the client service.
<b>Name</b>	Currently returns only ICQ.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests IP resolver information for the domain **resellerdocs.com**, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getipresolver&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response indicates that the IP resolver host name is **home**, and the client user ID is **12345678**:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <GetIPResolver>
    <domainname sld="resellerdocs" tld="com" id="152533676">
      resellerdocs.com
    </domainname>
    <configuration>
      <ipresolver>
        <ip-resolver-id>1243</ip-resolver-id>
        <host-name>
          <![CDATA[ home ]]>
        </host-name>
        <client-service>1</client-service>
        <client-user-id>
          <![CDATA[ 12345678 ]]>
        </client-user-id>
      </ipresolver>
    </configuration>
    <options>
      <clients>
        <client>
          <id>1</id>
          <name>ICQ</name>
          <short-name>icq</short-name>
          <description>
            <![CDATA[ ICQ ]]>
          </description>
        </client>
      </clients>
    </options>
  </GetIPResolver>
</interface-response>
```

```
        </description>
      </client>
    </clients>
  </options>
</GetIPResolver>
<Command>GETIPRESOLVER</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>eNom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# GetMailHosts

---

## Description

### Definition

Get mail hosts (DNS information) only.

### Usage

Use this command to retrieve the mail records associated with a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must use eNom's domain name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>HostNameX</b>	Host name. For the <b>GetMailHosts</b> command, this is <i>mail.DomainName.tld</i>
<b>RecordTypeX</b>	Record type. Permitted values are <b>MXE</b> (email forwarding) or <b>MX</b> (POP3 mail).
<b>AddressX</b>	IP address of eNom's mail forwarding service.

Param name	Definition
<b>MXPrefX</b>	Preference level: the higher this value, the higher priority this service. Default value is <b>10</b> .
<b>ServiceSelect</b>	The identification number of the e-mail service for this domain. <b>1048</b> no email <b>1051</b> email forwarding ("easy" mail) <b>1054</b> user configured <b>1105</b> user simplified <b>1114</b> enable POP Mail
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the mail host information for the domain **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getmailhosts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <EmailForwarding>True</EmailForwarding>
  <HostName1>mail</HostName1>
  <RecordType1>MXE</RecordType1>
  <Address1>209.19.56.20</Address1>
  <MXPref1>10</MXPref1>
  <ServiceSelect>1051</ServiceSelect>
  <Command>GETMAILHOSTS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetMetaTag

## Description

### Definition

Retrieve the metatags for one of a domain's host records.

### Usage

Use this command to retrieve the current metatags for one host record for a domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to resellertest.enom.com with login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/HostConfig.asp?DomainNameID=152533676>

After you assign to a host record a record type of **URL Frame**, then click **save changes**, then in the **DNS Settings (zone file)** section click **configure**, the **edit** link calls the **GetMetaTag** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>MetaTagHostID</b>	Required	Host record ID for this host record for this domain; our internal tracking number. You can retrieve all host IDs for a domain using the <a href="#">GetRegHosts</a> command.	8
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TitleBar</b>	Metatag content for browser title bar
<b>SiteDescription</b>	Metatag content for search engine results
<b>Keywords</b>	Metatag content for search engine keywords
<b>DomainNameID</b>	ID number for this domain, our internal tracking number
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the HTML metatag contents for the specified host record, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getmetatag&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
MetaTagHostID=11415002&ResponseType=XML
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <metatags>
    <titlebar>MY COOL TITLE</titlebar>
    <sitedescription>MY SITE DESCRIPTION</sitedescription>
    <keywords>MY SITE KEYWORDS</keywords>
    <DomainNameID>152533676</DomainNameID>
  </metatags>
  <Command>GETMETATAG</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# GetOrderDetail

---

## Description

### Definition

Get detailed information about an order.

### Usage

Use this command to retrieve contents and details of an order when you know the order number.

Use this command to monitor status when an order includes non-real-time domain names (names that, at the time you submit the order, have an **RRPCode** value of **1300** and an **IsRealTimeTLD** value of **false**).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/ViewOrders.asp>

On the **view orders** page, clicking a link in the **Order #** column calls the **GetOrderDetail** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>OrderID</b>	Required	The identification number of the order for which you want details. You can retrieve this number using the <a href="#">GetOrderList</a> command.	10

## Returned parameters and values

Param name	Definition
<b>OrderID</b>	9-digit order identification number.
<b>Result</b>	<b>True/False</b> -- <b>True</b> indicates that this order exists, and exists under this account.
<b>BillDate</b>	Time at which customer's account was billed for the transaction amount.
<b>CCRefNum</b>	Credit card reference number for this transaction, generated by us.
<b>ProductType</b>	Description of this item.
<b>Description</b>	Description of the item. Return value is usually a domain name.
<b>Status</b>	Status for fulfilling the order for this item. Only a status <b>Successful</b> indicates that the Registry has registered this name to you.
<b>Quantity</b>	Number of years.
<b>AmountPaid</b>	Amount paid for this item. If the Registry has processed this name and has not registered it to you, the <b>AmountPaid</b> value is <b>Not billed</b> . If the value is <b>Not billed</b> , check the <b>Status</b> parameter for the reason for failure.
<b>DomainPassword</b>	Domain password, if one was assigned
<b>OrderStatus</b>	Order status. If <b>OrderStatus</b> is <b>Open</b> , check back later: the order is still being processed. If <b>OrderStatus</b> is <b>Closed</b> , check the <b>Status</b> parameter. If we registered the domain the <b>Status</b> value is <b>Successful</b> . Any other value indicates a failure.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the details of order **156062775**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetOrderDetail&
uid=resellid&pw=resellpw&orderid=156062775&responsetype=xml
```

The response indicates that in this order, the account successfully purchased 2 products:

```
<?xml version="1.0" ?>
<interface-response>
  <Order>
    <OrderID>156062775</OrderID>
    <Result>True</Result>
    <BillDate>7/19/2002 3:42:29 PM</BillDate>
    <CCRefNum />
    <OrderBillAmount>$35.80</OrderBillAmount>
    <AdjustToAccount />
    <Certs>False</Certs>
  </Order>
</interface-response>
```

```
<ProductType>Register</ProductType>
<Description>resellerdocs2.net</Description>
<Status>Successful</Status>
<Quantity>2</Quantity>
<AmountPaid>$17.90</AmountPaid>
</OrderDetail>
<OrderDetail>
  <ProductType>Register</ProductType>
  <Description>resellerdocs3.info</Description>
  <Status>Successful</Status>
  <Quantity>2</Quantity>
  <AmountPaid>$17.90</AmountPaid>
</OrderDetail>
</Order>
<Command>GETORDERDETAIL</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# GetOrderList

---

## Description

### Definition

Get a list of the orders placed through this account.

### Usage

Use this command to retrieve a list of orders, identified by order number.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/myaccount/newreports.asp>

In the **Report Categories** menu, select the **view orders** option. Clicking the **view report** button calls the **GetOrderList** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Start</b>	Optional	Return sets of 25 records in reverse chronological order. For example, <b>Start=26</b> returns the 26th through 50th most recent orders. Defaults to <b>1</b> .	4
<b>StartDate</b>	Optional; if omitted, the last six months of orders are returned	Beginning date of orders to return. Must be no more than six months before <b>EndDate</b> . Permitted format is <b>MM/DD/YYYY</b>	10
<b>EndDate</b>	Optional; if omitted, the last six months of orders are returned	End date of orders to return. Must be no more than six months after <b>StartDate</b> . Permitted format is <b>MM/DD/YYYY</b>	10

## Returned parameters and values

Param name	Definition
<b>OrderID</b>	Order identification number, in nine-digit format.
<b>OrderDate</b>	Date on which the order was placed. Time stamp indicates the time at which our database received the order.
<b>StatusDesc</b>	Overall status of the order. Options are: <b>0</b> New <b>1</b> Authorization Succeeded <b>2</b> Authorization Failed <b>3</b> Processing <b>5</b> Ready for billing <b>6</b> Order complete <b>7</b> Order canceled
<b>OrderProcessFlag</b>	<b>True/False</b> -- <b>True</b> indicates the order has been processed.
<b>ShowPreviousAndNext</b>	<b>Yes/No</b> -- <b>Yes</b> gives user access to previous and next transactions.
<b>ShowPreviousLink</b>	<b>Yes/No</b> -- <b>Yes</b> displays a link that calls the previous block of transactions.
<b>PreviousStartPosition</b>	First transaction to include in the response, counting back from the most recent, if user clicks the <b>Previous</b> link.
<b>ShowStart</b>	First transaction to include in the response, counting back from the most recent.
<b>ShowEnd</b>	Last transaction to include in the response, counting back from the most recent.
<b>ShowNextLink</b>	<b>Yes/No</b> -- <b>Yes</b> displays a link that calls the next block of transactions.
<b>RecordCount</b>	Total number of orders stored for this account.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of orders successfully submitted through account **resellid**. The optional **Start=26** parameter specifies that the list should start with the 26th most recent order. The query requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetOrderList&
uid=resellid&pw=resellpw&Start=26&responsetype=xml
```

The response gives an overview of orders starting with the 26th most recent. Normally, the response would include the 26th through 50th most recent orders; this response ends with the 37th because only 37 orders have been placed in the lifetime of the account:

```
<?xml version="1.0" ?>
<interface-response>
```

```

<OrderList>
  <OrderDetail>
    <OrderID>156062752</OrderID>
    <OrderDate>7/19/2002 12:28:37 PM</OrderDate>
    <StatusDesc>Order complete</StatusDesc>
    <OrderProcessFlag>True</OrderProcessFlag>
  </OrderDetail>
  <OrderDetail>
    <OrderID>156062751</OrderID>
    <OrderDate>7/19/2002 12:15:27 PM</OrderDate>
    <StatusDesc>Order complete</StatusDesc>
    <OrderProcessFlag>True</OrderProcessFlag>
  </OrderDetail>
  <OrderDetail>
    <OrderID>156062750</OrderID>
    <OrderDate>7/19/2002 12:10:34 PM</OrderDate>
    <StatusDesc>Order complete</StatusDesc>
    <OrderProcessFlag>True</OrderProcessFlag>
  </OrderDetail>
  .
  .
  .
  <ShowPreviousAndNext>Yes</ShowPreviousAndNext>
  <ShowPreviousLink>Yes</ShowPreviousLink>
  <PreviousStartPosition>1</PreviousStartPosition>
  <ShowStart>26</ShowStart>
  <ShowEnd>37</ShowEnd>
  <ShowNextLink>No</ShowNextLink>
  <RecordCount>37</RecordCount>
</OrderList>
<Command>GETORDERLIST</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>

```

---

# GetParkingText

---

## Description

### Definition

Get the parking text for a domain name.

### Usage

Use this command when you want to retrieve the parking text for a domain name. Parking text is the text that often displays from the time a domain name is purchased until its associated Web site is published.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ParkingPageConfig.asp?DomainNameID=152533676>

On the **parking text** page, the **GetParkingText** command provides the initial contents of the text box.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>ParkingText</b>	Current parking text
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the parking text for **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getparkingtext&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response indicates that the parking text for **resellerdocs.com** is **This site is under development.**:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <GetParkingText>
    <domainname sld="resellerdocs" tld="com" id="152533676">resellerdocs.com
    </domainname>
    <ParkingText>This site is under development.</ParkingText>
  </GetParkingText>
  <Command>GETPARKINGTEXT</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

## Related commands

[SetParkingText](#)

---

# GetPasswordBit

---

## Description

### Definition

Check to see if a password is set for a domain name.

### Usage

Use this command to determine whether a password is set for a domain name, and what the password is.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

On the **domain control panel**, in the **utilities** box, the **Domain Access Password** link calls the **GetPasswordBit** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>PasswordSet</b>	Returns <b>1</b> if a password is set, <b>0</b> otherwise.

Param name	Definition
<b>DomainPassword</b>	If <b>PasswordSet=1</b> , then a password is returned in this parameter.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the domain name password for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getpasswordbit&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

In the response, the **password-set** value of **1** indicates that a password is set. The **DomainPassword** value indicates that the domain password is **userpw**.

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <DomainPassword>userpw</DomainPassword>
  <password-set>1</password-set>
  <Command>GETPASSWORDBIT</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetPOP3

---

## Description

### Definition

Gets all POP3 accounts for a domain name.

### Usage

Use this command to generate a list of the POP mail accounts belonging to a domain name. Return information includes mailbox names and BundleID numbers for the domain's POP paks.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **domain control panel**, **email settings** box, if the current service is **POP mail**, clicking the **configure** button calls the **GetPOP3** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must use eNom's domain name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>GetDefaultOnly</b>	Optional	If this is set to <b>1</b> , extra blank input records are returned for user input on the POP3 form. Primarily used in <b>XML</b> output.	1

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>EmailCount</b>	Number of email accounts on the domain name.
<b>UsernameX</b>	POP user name for this email account (this mailbox). Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>PasswordX</b>	POP password name for the email account. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>QuotaX</b>	Maximum storage capacity for each mailbox, in megabytes. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>ExpDateX</b>	Expiration date of the POP3 account. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>BundleIDX</b>	ID number of this POP pak. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>AutoRenewX</b>	Auto-renewal setting for this POP3 account and its POP pak. <b>1</b> signifies that auto-renew is on, <b>0</b> off. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>QuotaUsedX</b>	Number of MB of storage space currently in use for this account. Indexed $X = 1$ to <i>EmailCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]BundleIDX</b>	ID number of this POP pak. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]QtyPurchasedX</b>	Total number of POP accounts that have been purchased for this domain name. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]QtyAvailableX</b>	Total number of POP accounts currently configured for this domain name. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]ExpDateX</b>	Expiration date of this POP pak. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]AutoRenewX</b>	Auto-renewal setting for this POP pak. <b>1</b> signifies that auto-renew is on, <b>0</b> off. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>[Pak]QuotaX</b>	Maximum storage capacity for each mailbox, in megabytes. Prefixed <b>Pak</b> and indexed $X = 1$ to <i>Count</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of all POP mail accounts in **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getpop3&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response lists the five POP mail accounts that belong to **resellerdocs.com**. Four are part of bundle **5105** and one is from bundle **5134**:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <pop>
    <username>jane</username>
    <password>janepw</password>
    <quota>20</quota>
    <expdate>7/26/2003 3:48:15 PM</expdate>
    <AutoRenew>1</AutoRenew>
    <BundleId>5105</BundleId>
  </pop>
  <pop>
    <username>john</username>

---

# GetPOPExpirations

---

## Description

### Definition

Retrieve a list of POP paks and their expiration dates, and the domains they are associated with.

### Usage

Use this command to retrieve a list of POP paks and their expiration dates, and the domains they are associated with.

This command allows you to synchronize your database with ours. In particular, you can use it to identify POP paks that are about to expire or have recently expired, update the expiration dates of POP paks that were renewed in a site other than yours, or retrieve the expiration date of POP paks associated with domains that were transferred or pushed into your account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **email settings** section, the **configure** button returns expiration dates for POP mail paks—one component of the information retrieved by the **GetPOPExpirations** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainX</b>	Domain name with which this POP pak is associated. The response is indexed <i>X</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>BundleIDX</b>	ID number of this POP pak, from our internal records. Use this ID number to renew the POP pak using the <a href="#">RenewPOPBundle</a> command. The response is indexed <i>X</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>ExpDateX</b>	Expiration date of this POP pak. The response is indexed <i>X</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves POP pak expiration dates, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetPOPExpirations&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, the list of POP paks and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <popexpirations>
    <pop>
      <domain>resellerdocs.com</domain>
      <bundleid>5105</bundleid>
      <expdate>7/26/2003 3:48:15 PM</expdate>
    </pop>
    <pop>
      <domain>resellerdocs.com</domain>
      <bundleid>5134</bundleid>
      <expdate>8/15/2003 11:01:30 AM</expdate>
    </pop>
    <pop>
      <domain>resellerdocs.com</domain>
      <bundleid>5735</bundleid>
      <expdate>5/14/2004 4:20:40 PM</expdate>
    </pop>
    <count>3</count>
  </popexpirations>
  <Command>GETPOPEXPIRATIONS</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
```

```
<ResponseCount>0</ResponseCount>
<MinPeriod>1</MinPeriod>
<MaxPeriod>10</MaxPeriod>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>True</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<ExecTime>8.984375E-02</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# GetPOPForwarding

---

## Description

### Definition

Retrieve the email forwarding record—either POP or our email forwarding—for a specified mailbox name.

### Usage

Use this command to retrieve the email forwarding record for a specified mailbox user name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enom.staging.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **Email Settings** section, the **configure** button retrieves forwarding records in a manner similar to the **GetPOPForwarding** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The user name must be an existing email address for this domain name.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>UserName</b>	Required	Mailbox name (for example, <b>john</b> in john@example.com)	50
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Domain SLD and TLD
<b>DomainNameID</b>	Numeric domain name ID, from our database
<b>UserName</b>	Mailbox name
<b>ForwardTo</b>	Email forwarding address
<b>Active</b>	Is this forwarding address active? <b>1</b> indicates yes.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the email forwarding record for **Jane.Doe@resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GETPOPFORWARDING&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&username=Jane.Doe&
ResponseType=xml
```

In the response, the presence of the **popforwarding** node and the absence of an **ErrString** parameter confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <popforwarding>
    <domainname>resellerdocs.com</domainname>
    <domainnameid>152533676</domainnameid>
    <username>Y</username>
    <forwardto>jane.doe@example.com</forwardto>
    <active>1</active>
  </popforwarding>
  <Command>GETPOPFORWARDING</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
```

```
<TimeDifference>+03.00</TimeDifference>
<ExecTime>0.1132813</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[  ]>
</debug>
</interface-response>
```

# GetRegHosts

## Description

### Definition

Get hosts (DNS information) for a domain without mail host records.

### Usage

Use this command to display DNS information for a domain. The response does not include mail host entries. **GetHosts**, a similar command, returns all host records including mail host records.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?domainnameid=152533676>

In the **domain control panel**, **DNS settings** box, the **configure** button calls the **GetRegHosts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must use eNom's domain name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>HostIDX</b>	Identification number of this individual host record

Param name	Definition
<b>HostNameX</b>	Name of this individual host record
<b>AddressX</b>	Address of this individual host record
<b>RecordTypeX</b>	Record type of this individual host record
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the DNS hosting information for a domain name without mail host records, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getreghosts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <hostID1>11413517</hostID1>
  <HostName1>www</HostName1>
  <Address1>127.0.0.1</Address1>
  <RecordType1>A</RecordType1>
  <hostID2>11413518</hostID2>
  <HostName2>@ (none)</HostName2>
  <Address2>127.0.0.1</Address2>
  <RecordType2>A</RecordType2>
  <hostID3>11414999</hostID3>
  <HostName3>map</HostName3>
  <Address3>maps.name-services.com</Address3>
  <RecordType3>CNAME</RecordType3>
  <hostID4>11415000</hostID4>
  <HostName4>www.map</HostName4>
  <Address4>maps.name-services.com</Address4>
  <RecordType4>CNAME</RecordType4>
  <hostID5>11415001</hostID5>
  <HostName5>phone</HostName5>
  <Address5>messaging.name-services.com</Address5>
  <RecordType5>CNAME</RecordType5>
  <hostID6>11415002</hostID6>
  <HostName6>www.phone</HostName6>
  <Address6>messaging.name-services.com</Address6>
  <RecordType6>CNAME</RecordType6>
  .
  .
  .
```

```
.  
<HostCount>10</HostCount>  
<ServiceSelect>1051</ServiceSelect>  
<Command>GETREGHOSTS</Command>  
<ErrCount>0</ErrCount>  
<Server>ResellerTest</Server>  
<Site>enom</Site>

# GetRegistrationStatus

---

## Description

### Definition

Get the registration and paid status of a domain name.

### Usage

Use this command to get the registration status and paid status of domains in your account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainManager.asp?tab=iown>

This command is not implemented on **enom.com**; however, the **registered** tab of the **my domains** page returns similar information.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>RegistrationStatus</b>	Registration Status of the Domain name. Options are <b>Processing</b> , <b>Registered</b> , <b>Hosted</b> , <b>Null</b> .
<b>PurchaseStatus</b>	Purchase status of the Domain name. Options are <b>Processing</b> , <b>Paid</b> , <b>Null</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves information on whether the domain name **resellerdocs.com** is registered and paid for, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getregistrationstatus&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <RegistrationStatus>Registered</RegistrationStatus>
  <Command>GETREGISTRATIONSTATUS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# GetRegLock

## Description

### Definition

Get the registrar lock setting for a domain name.

### Usage

Use this command to determine whether one of your domain names is locked, that is, whether it is protected from being transferred to another registrar.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **domain control panel**, **utilities** box, clicking the **Set reg-lock/auto-renew options** link calls the **GetRegLock** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>RegLock</b>	Returns <b>1</b> if locked, <b>0</b> otherwise if the responsetype is <b>Text</b> .

Param name	Definition
<b>RRPCode</b>	Response code from NSI.
<b>RRPText</b>	Response text from NSI.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>IsLockable</b>	Indicates whether this TLD can use the Registrar Lock feature. Return values are <b>True</b> or <b>False</b> .
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the lock status of a domain name, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getreglock&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

In the response, the **reg-lock** value of **1** indicates that the domain name is locked:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <reg-lock>1</reg-lock>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>GETREGLOCK</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetRenew

---

## Description

### Definition

Get the auto-renew setting for a domain name.

### Usage

Use this command to determine whether a domain in your account is set to renew automatically. If so, the renewal is charged to your account a month before the expiration date for the domain name. Fifteen days before that, you receive an email notifying you of the auto-renew charges.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **domain control panel**, **utilities** box, the **Set reg-lock/auto-renew options** link calls the **GetRenew** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20
SLD	Required	Second-level domain name (for example, enom in enom.com)	63
TLD	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>RenewName</b>	Returns <b>1</b> if this domain is set to auto-renew, <b>0</b> otherwise.
<b>PakExist</b>	Returns <b>1</b> if there are POP paks associated with this domain, <b>0</b> otherwise.
<b>AutoPakRenew</b>	Returns <b>1</b> if the POP paks for this domain are set to auto-renew, <b>0</b> otherwise.
<b>EMailFwdExists</b>	Returns <b>1</b> if this domain subscribes to email forwarding, <b>0</b> otherwise.
<b>EMailForwardRenew</b>	Returns <b>1</b> if the email forwarding for this domain is set to auto-renew, <b>0</b> otherwise.
<b>URLFwdExists</b>	Returns <b>1</b> if this domain subscribes to URL forwarding, <b>0</b> otherwise.
<b>URLForwardRenew</b>	Returns <b>1</b> if the URL forwarding for this domain is set to auto-renew, <b>0</b> otherwise.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the auto-renew status of **resellerdocs.com** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=getrenew&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

In the response, the **auto-renew** value of **1** indicates that the domain is set to automatically renew:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <auto-renew>1</auto-renew>
  <Command>GETRENEW</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# GetReport

---

## Description

### Definition

Get a report on a user's account.

### Usage

Use this command to retrieve an overview of the domains in an account: domain names, name server status, registration status, and expiration date.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/domains/DomainManager.asp?tab=iown>

The **GetReport** command works in the background of the **my domains** page. Each of the four tabs on the page displays one category of domain names returned by the **GetReport** query.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20

## Returned parameters and values

Param name	Definition
FName	First (use) name of the account registrant.
LName	Last (family) name of the account registrant.
Party	Party identification number. Format is 32 hexadecimal digits, hyphenated.
DN	Domain name parameter.
DomName	Domain name attribute.

Param name	Definition
<b>NSStatus</b>	Name server status. Value <b>yes</b> indicates our name servers. Value <b>no</b> indicates not our name servers.
<b>RegistrationStatus</b>	Registration status in this account. Return values are: <b>Deleted</b> Domain has been deleted from registrar's database. <b>Expired</b> Domain registration has expired but has not been deleted from registrar's database (domain is within "grace period" for reactivation). <b>Expired Transfers</b> Domain that is being transferred to another registrar in expired state. <b>Hosted</b> Domain that is hosted by us but registered with another registrar. <b>Hosted Deleted</b> Domain that was hosted by us but registered elsewhere, its registration has expired, and it has been deleted from our database. <b>Hosted Expired</b> Domain that is hosted by us but registered elsewhere, its registration has expired, but it is still present in our database. <b>Hosted Transfers</b> Domain that is hosted by us but registered elsewhere, and the registration is transferring to another registrar. <b>Keyword</b> Keyword, an obsolete feature. <b>Registered</b> Domain that is registered by us. <b>Transferred away Hosted and Registered</b> Domain that was registered and hosted by us, and both the registration and hosting services are transferring away from us.
<b>ExpirationDate</b>	Date on which this domain registration expires.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a report on account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getreport&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, the **ReportDetail** section lists the domains in account **resellid**:

```
<?xml version="1.0" ?>
<interface-response>
  <GetReport>
    <FName>John</FName>
    <LName>Doe</LName>
    <Party>{BB4A2DE1-6485-45CB-A4FC-EE39BA0C1629}</Party>
    <ReportDetail>
      <dn DomName="resellerdocs.com" nsstatus="No" registrationstatus="Hosted"
        ExpirationDate="07/15/03" />
      <dn DomName="resellerdocs2.net" nsstatus="Yes" registrationstatus="Registered"
        ExpirationDate="06/25/04" />
      <dn DomName="resellerdocs3.info" nsstatus="Yes" registrationstatus="Registered"
```

```
        ExpirationDate="06/25/04" />
    </ReportDetail>
</GetReport>
<Command>GETREPORT</Command>
<ErrCount>0</ErrCount>
<Server>ResellerTest</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
    <![CDATA[  ]]>
</debug>
</interface-response>
```

# GetResellerInfo

---

## Description

### Definition

Retrieve the contact information for the account holder.

### Usage

Use this command to retrieve contact information for a reseller account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/EditContact.asp>

On the **my info** page, the **Organization (or Individual) Information** box displays the results of the **GetResellerInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>OrganizationName</b>	Reseller organization name
<b>FName</b>	Reseller first name
<b>LName</b>	Reseller last name
<b>Address1</b>	Address first line
<b>Address2</b>	Address second line
<b>City</b>	City
<b>StateProvince</b>	Name of state or province
<b>StateProvinceChoice</b>	<b>S</b> indicates <b>StateProvince</b> is a state; <b>P</b> , a province
<b>PostalCode</b>	Postal code
<b>Country</b>	Two-letter country code
<b>Phone</b>	Phone number
<b>Fax</b>	Fax number
<b>EEmailAddress</b>	Email address
<b>PhoneExt</b>	Phone extension
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves reseller contact information for the specified account and domain, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetResellerInfo&uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <ResellerInfo>
    <OrganizationName>Reseller Documents Inc.</OrganizationName>
    <FName>John</FName>
    <LName>Doe</LName>
    <Address1>111 Main St.</Address1>
    <Address2 />
    <City>Hometown</City>
    <StateProvince>WA</StateProvince>
    <StateProvinceChoice>S</StateProvinceChoice>
    <PostalCode>99999</PostalCode>
```

```
<Country>US</Country>
<Phone>5555555555</Phone>
<Fax>5555555556</Fax>

# GetSPFHosts

---

## Description

### Definition

Retrieve Sender Policy Framework (SPF) host records for a domain.

### Usage

Use this command to retrieve SPF host records for a domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainDetail.asp?DomainNameID=152533676>

In the **DNS settings (zone file)** section, the **test** record shows the SPF host record.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Name</b>	Name of this SPF record
<b>Type</b>	Type of this SPF record
<b>A-Radio</b>	Setting for A-radio
<b>MX-Radio</b>	Setting for MX-radio
<b>PTR-Radio</b>	Setting for PTR-radio
<b>ALL-Radio</b>	Setting for ALL-radio
<b>A-Records</b>	Value for A records
<b>MX-Records</b>	Value for MX records
<b>IP-Records</b>	Value for IP records
<b>INC-Records</b>	Value for INC record
<b>HostID</b>	Host ID number
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the SPF hosts for a domain and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getspfHosts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

In the response, host values confirm that the query was successful and that SPF records have been configured for this domain:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <host>
    <name>test</name>
    <type>TXT</type>
    <a-radio>off</a-radio>
    <mx-radio>on</mx-radio>
    <ptr-radio>on</ptr-radio>
    <all-radio>on</all-radio>
    <a-records>regular hostnames po</a-records>
    <mx-records>mx servers to</mx-records>
    <ip-records>127.0.0.1</ip-records>
    <inc-records>myisp.net mydomain.com</inc-records>
    <hostid>15195981</hostid>
```

```
</host>
<Command>GETSPFHOSTS</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod>1</MinPeriod>

# GetServiceContact

---

## Description

### Definition

Retrieve the customer service contact information for a domain name account.

### Usage

Use this command to retrieve customer service contact information for an account. If there is a PDQ subscription associated with this account, this command can return the PDQ contact information. Otherwise, this command returns the Billing contact information.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

[http://resellertest.enom.com/pdq/RE\\_Default.asp?maintab=overview](http://resellertest.enom.com/pdq/RE_Default.asp?maintab=overview)

Clicking the **my site** tab calls the **GetServiceContact** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Service</b>	Optional	Use <b>Service=PDQ</b> to return the contact information for this account's PDQ subscription. If the <b>Service</b> parameter is omitted, the Billing contact information is returned.	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Organization</b>	Name of contact's organization
<b>Address1</b>	Contact address, line 1
<b>Address2</b>	Contact address, line 2
<b>City</b>	Contact's city
<b>StateProvince</b>	Contact's state or province
<b>PostalCode</b>	Contact's postal code
<b>Country</b>	Contact's country
<b>Phone</b>	Contact's phone number
<b>Fax</b>	Contact's fax number
<b>EmailAddress</b>	Contact's email address
<b>URL</b>	URL of PDQ site, if any
<b>ResellerKey</b>	Reseller key of PDQ site, if any
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the customer service contact information for **resellid** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GETSERVICECONTACT&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, the presence of contact information, and the **ErrCount** value **0**, indicate that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <ServiceContact>
    <Organization>Reseller Documents Inc.</Organization>
    <Address1>111 Main St.</Address1>
    <Address2 />
    <City>Hometown</City>
    <StateProvince>WA</StateProvince>
    <PostalCode>99999</PostalCode>
    <Country>US</Country>
    <Phone>+1.5555555555</Phone>
    <Fax>+1.5555555556</Fax>
    <EmailAddress>john.doe@resellerdocs.com</EmailAddress>
```

```
<URL />
<ResellerKey />
</ServiceContact>
<Command>GETSERVICECONTACT</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod>1</MinPeriod>
<MaxPeriod>10</MaxPeriod>
<Server>RESELLERTEST</Server>
<Site>enom</Site>

# GetSubAccountDetails

---

## Description

### Definition

Get the wholesale prices and enabled settings for one subaccount.

### Usage

Use this command to list prices for one subaccount.

This command can be used to change TLD prices for one subaccount, but we recommend using the [SetResellerTLD Pricing](#) command instead. [SetResellerTLD Pricing](#) has fewer requirements than **GetSubaccountDetails**, and as a result is easier to use.

This command can also be used to convert a subaccount from retail to reseller, but we recommend using the [MakeResellerAccount](#) command instead, because [MakeResellerAccount](#) has fewer requirements.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-List.asp>

On the **sub-account** page, clicking a link in the **LoginID** column calls the **GetSubAccountDetails** command without the **Action=Manage** parameter.

<http://resellertest.enom.com/resellers/SubAccount-Manage.asp?Account=154-dz-5567>

On the **Sub-account configuration** page, clicking the **save changes** button calls the **GetSubAccountDetails** command with the **Action=Manage** parameter.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The account must be a reseller account.
- The subaccount must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Account</b>	Required	Subaccount ID number, in <i>NNN-aa-NNNN</i> format. You can retrieve this number using the <a href="#">GetSubAccounts</a> command.	20
<b>Action</b>	Optional; default value is <b>List</b>	Action to take. Permitted values are <b>List</b> , <b>Info</b> , and <b>Manage</b> . <b>Action=List</b> returns a long list of current price settings. <b>Action=Info</b> returns a short list of information about the subaccount and parent account. <b>Action=Manage</b> updates product prices when this query executes. If the query does not include the <b>Action</b> parameter, the product prices do not change.	20
<b>UseQtyEngine</b>	Optional	Year-bracket to retrieve prices for. For example, <b>UseQtyEngine=2</b> retrieves the annual price for domain name registrations of 2 to 4 years; <b>UseQtyEngine=5</b> retrieves the annual price for 5 to 9 years. Permitted values are <b>1</b> , <b>2</b> , <b>5</b> , and <b>10</b> . You can use only one <b>UseQtyEngine</b> parameter per query. Use this parameter with <b>Action=List</b> and <b>Action=Manage</b> .	
<b>OrigType</b>	Required if converting the subaccount from retail to reseller	Type of subaccount at the time it was created. Permitted values are <b>Reseller</b> or <b>Retail</b> .	20
<b>AcctType</b>	Required if <b>Action=Manage</b>	Account type. Permitted values are <b>Reseller</b> or <b>Retail</b> . If <b>Action=Manage</b> , <b>OrigType=Retail</b> and <b>AcctType=Reseller</b> , the subaccount converts to a reseller account when this query executes.	20
<b>TLDPrice</b>	Required for every TLD we offer if <b>Action=Manage</b> . If any TLDs are missing, the query fails.	Price for registering a .com domain.	20
<b>TLDRenew</b>	Required for every TLD we offer if <b>Action=Manage</b> . If any TLDs are missing, the query fails.	Price for renewing a .com domain.	20
<b>TLDTransfer</b>	Required for every TLD we offer if <b>Action=Manage</b> . If any TLDs are missing, the query fails.	Price for transferring a .com domain.	20

## Returned parameters and values

Param name	Definition
<b>Action</b>	If <b>&lt;Action&gt;MANAGE&lt;/Action&gt;</b> is in the response, prices have been changed to those in the following list.
<b>SubAccount</b>	Subaccount ID number, in <i>NNN-aa-NNNN</i> format.
<b>PartyID</b>	Party identification number expressed as 32 hexadecimal characters, hyphenated.
<b>LoginID</b>	Account ID of the subaccount.
<b>DomainCount</b>	Number of domains in this subaccount.
<b>Account</b>	Subaccount ID number, in <i>NNN-aa-NNNN</i> format.
<b>TLD</b>	Top-level domain; for example, com for .com domains.
<b>RegisterPrice</b>	Price for registering a domain of this type for one year.
<b>RegisterEnabled</b>	<b>True/False</b> -- <b>True</b> indicates that this subaccount allows customers to register domain names.
<b>RenewPrice</b>	Price for renewing a domain of this type for one year.
<b>RenewEnabled</b>	<b>True/False</b> -- <b>True</b> indicates that this subaccount allows customers to renew domain names.
<b>TransferPrice</b>	Price for transferring a domain of this type, and paying for one year of registration.
<b>TransferEnabled</b>	<b>True/False</b> -- <b>True</b> indicates that this subaccount allows customers to transfer domain names.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests for a subaccount of **resellid**, subaccount **154-dz-5567**. The query specifies prices for all domain name products and, by using the **Action=Manage** parameter, specifies that the prices for the subaccount should be updated. Finally, the query requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?Command=GETSUBACCOUNTDETAILS&
uid=resellid&pw=resellpw&Account=154-dz-5567&action=manage&AcctType=retail&
comprice=19&comrenew=20&comtransfer=21&netprice=19&netrenew=20&nettransfer=21&
orgprice=19&orgrenew=20&orgtransfer=21&infoprice=19&inforenew=20&infotransfer=21&
ccprice=69&ccrenew=69&cctransfer=69&bizprice=19&bizrenew=20&biztransfer=21&
tvprice=69&tvrenew=69&tvtransfer=69&wsprice=19&wsrenew=20&wstransfer=21&
usprice=19&usrenew=20&ustransfer=21&bzprice=69&bzrenew=69&bztransfer=69&
nuprice=69&nurenew=69&nutransfer=69&responsetype=xml
```

The response lists the prices given in the query for each of the domain name products, and then lists identification information and the updated prices for subaccount **154-dz-5567**:

```

<?xml version="1.0" ?>
<interface-response>
  <SubAccountsManage>
    <Action>MANAGE</Action>
    <Set>
      <SubAccount>154-dz-5567</SubAccount>

# GetSubAccountPassword

---

## Description

### Definition

Get the password for a domain name.

### Usage

Use this command to retrieve the password for a domain name that belongs to your account. The password is e-mailed to the Registrant contact address.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/help/>

On the **help** page, the **Password recovery** link calls the **GetSubAccountPassword** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the password for domain **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetSubAccountPassword&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The **0** value for **ErrCount** indicates that the request has been processed successfully. The password is e-mailed to the registrant almost instantly.

```
<?xml version="1.0" ?>
<interface-response>
  <Command>GETSUBACCOUNTPASSWORD</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# GetSubAccounts

## Description

### Definition

List subaccounts.

### Usage

Use this command to list subaccounts for an account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount.asp>

On the **subaccount** page, clicking the **List/Manage** link calls the **GetSubAccounts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ListBy</b>	Optional	Sorting parameter. Options are <b>LName</b> , <b>EEmailAddress</b> , <b>LoginID</b> .	20
<b>StartLetter</b>	Optional	First letter of the <b>ListBy</b> value	20
<b>StartPosition</b>	Optional	First return value in the list generated with the <b>ListBy</b> and <b>StartLetter</b> parameters. Maximum number of subaccounts returned per query is 25.	20

## Returned parameters and values

Param name	Definition
<b>PartyID</b>	Party identification number expressed as 32 hexadecimal characters, hyphenated
<b>LoginID</b>	Login ID of the subaccount

Param name	Definition
<b>DomainCount</b>	Number of domains in this subaccount
<b>Account</b>	Subaccount ID number in <i>NNN-aa-NNNN</i> format.
<b>Reseller</b>	<b>Reseller=0</b> indicates that this subaccount is a retail account; <b>Reseller=1</b> indicates this subaccount is a reseller account
<b>Count</b>	Number of subaccounts in this account that fit the <b>ListBy</b> and <b>StartLetter</b> criteria
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of subaccounts for account **resellid**. It specifies that the return values should be listed by **last name**, starting with the letter **D**, and starting with the **seventh** subaccount in that list. Finally, the string requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getsubaccounts&
uid=resellid&pw=resellpw&ListBy=LName&StartLetter=D&StartPosition=7&
responsetype=xml
```

The response indicates that account **resellid** has 12 subaccounts that fit the parameters, and returns the seventh through twelfth subaccounts in that list:

```
<?xml version="1.0" ?>
<interface-response>
  <SubAccounts>
    <SubAccount>
      <PartyID>{AFCFAEC0-2FB6-4512-B043-EE6653618E1F}</PartyID>

# GetSubaccountsDetailList

---

## Description

### Definition

Retrieve a list of subaccounts, and contact information for their owners.

### Usage

Use this command to retrieve contact information for your subaccounts.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>LoginID</b>	Subaccount ID
<b>FName</b>	First name of the subaccount owner
<b>LName</b>	Last name of the subaccount owner
<b>EmailAddress</b>	Email address of the subaccount owner
<b>OrganizationName</b>	Organization of the subaccount owner
<b>URL</b>	URL of the subaccount owner's business
<b>JobTitle</b>	Job title of the subaccount owner

Param name	Definition
<b>Address1</b>	Street address of the subaccount owner's address, first line
<b>Address2</b>	Street address of the subaccount owner's address, second line
<b>City</b>	Subaccount owner's city
<b>StateProvince</b>	Subaccount owner's state or province
<b>PostalCode</b>	Subaccount owner's postal code
<b>Country</b>	Subaccount owner's country
<b>Phone</b>	Subaccount owner's phone number
<b>Fax</b>	Subaccount owner's fax number
<b>PhoneExt</b>	Extension of subaccount owner's phone number
<b>Reseller</b>	Reseller status. <b>1</b> indicates this is a reseller subaccount; <b>0</b> indicates retail.
<b>Password</b>	If this is a retail account, the account password
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of the subaccounts of account **resellid**, with owners' contact information, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetSubaccountsDetailList&uid=resellid&pw=resellpw&ResponseType=xml
```

The response is a list of subaccounts with the owner information:

```
<?xml version="1.0" ?>
<interface-response>
  <SubAccountDetailList>
    <SubAccount>

# GetTLDList

---

## Description

### Definition

Retrieve a list of the TLDs that you offer.

### Usage

Use this command to retrieve a list of the TLDs that you offer. If you have not specifically authorized TLDs then this command returns all TLDs offered by us.

Use the [AuthorizeTLD](#) command to authorize TLDs and the [RemoveTLD](#) command to remove TLDs from authorized status for your account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

Clicking the TLD pricing tab shows a table that includes all TLDs offered by this account (although the contents of this particular table are retrieved by a different command than **GetTLDList**).

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TLDX</b>	Top-level domain name (extension). If <b>ResponseType=text</b> or <b>html</b> , each entry is indexed X.
<b>TLDCount</b>	Number of TLDs listed in this response (that is, the number of TLDs authorized by this account)
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves a list of TLDs authorized for this account, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=gettldlist&
uid=resellid&pw=resellpw&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <tldlist>
    <tld>
      <tld>com</tld>
    </tld>
    <tld>
      <tld>net</tld>
    </tld>
    <tld>
      <tld>org</tld>
    </tld>
    <tld>
      <tld>us</tld>
    </tld>
    <tld>
      <tld>info</tld>
    </tld>
    <tld>
      <tld>biz</tld>
    </tld>
    <tld>
      <tld>co.uk</tld>
    </tld>
    <tld>
      <tld>org.uk</tld>
    </tld>
  </tldlist>
</interface-response>
```

```
</tld>
<tld>
  <tld>de</tld>
</tld>
<tldcount>9</tldcount>
</tldlist>
<Command>GETTLDLIST</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod />
<MaxPeriod>10</MaxPeriod>
<Server>RESELLERTEST</Server>
<Site />
<IsLockable />
<IsRealTimeTLD />
<ExecTime>0.140625</ExecTime>
<Done>true</Done>

# GetTransHistory

## Description

### Definition

Return a list of up to 25 transactions in an account.

### Usage

Use this command to retrieve an overview of transactions.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/>

When the **my enom** submenu is open on the left side of the Web page, clicking the **transactions** link calls the **GetTransHistory** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	<b>Required</b>	Account login ID	20
<b>PW</b>	<b>Required</b>	Account password	20
<b>Start</b>	Optional	Return sets of 25 records in reverse chronological order. For example, <b>Start=26</b> returns the 26th through 50th most recent transactions. Defaults to <b>1</b> .	4
<b>StartDate</b>	Optional; if omitted, the last six months of orders are returned	Beginning date of transactions to return. Must be no more than six months before <b>EndDate</b> . Permitted format is <b>MM/DD/YYYY</b>	10
<b>EndDate</b>	Optional; if omitted, the last six months of orders are returned	End date of transactions to return. Must be no more than six months after <b>StartDate</b> . Permitted format is <b>MM/DD/YYYY</b>	10

## Returned parameters and values

Param name	Definition
<b>FName</b>	First (use) name.
<b>LName</b>	Last (family) name.
<b>PartyID</b>	Party identification number. Format is 32 hexadecimal characters, hyphenated.
<b>RecordCount</b>	Number of transactions in the transaction history.
<b>Trans-Date</b>	Time stamp indicates when the transaction was submitted to our accounting system.
<b>Amount</b>	Amount of the transaction, \$US.
<b>TransDescription</b>	Description of the transaction. Values are: <b>1</b> Order <b>2</b> Debit Credit Card <b>3</b> Credit Credit Card <b>4</b> Refill Reseller Account <b>5</b> Check Refill <b>7</b> Credit Reseller Balance <b>6</b> Debit Reseller Balance <b>8</b> Transfer Order <b>9</b> Reverse Refill <b>10</b> Refund and Reverse Commissions <b>11</b> Transfer from commission account <b>12</b> Commission account cashout <b>16</b> Sales Commission <b>17</b> CCTransaction Fee <b>20</b> Refund and Reverse Commissions with Charge Back <b>21</b> Charge Back <b>19</b> Club Drop <b>22</b> Reverse Commission <b>23</b> Reverse Commission with Charge Back <b>25</b> Preregistration Fee <b>26</b> Activation Fee <b>28</b> Refill Service Convenience Charge <b>30</b> PDQ Annual Fee <b>32</b> Refill Reseller Account (No Service Charge)
<b>OrderID</b>	Order identification number, a nine-digit number.
<b>TransType</b>	Transaction type. The value for <b>TransType</b> corresponds to the value for <b>TransDescription</b> above.
<b>OrderProcessFlag</b>	<b>True</b> indicates the order has been successfully processed.
<b>LinkValue</b>	Used in XML to build links to individual orders.
<b>Balance</b>	Balance in the account following this transaction.
<b>ComBalance</b>	Commission balance following this transaction.
<b>TransStatus</b>	Status of the transaction. Options are: <b>1</b> Ready for billing (Processing in UI) <b>2</b> Transaction failed (Failed in UI) <b>3</b> Transaction successful (Successful in UI) <b>6</b> Void (Voided in UI)
<b>ShowPreviousAndNext</b>	<b>Yes/No</b> -- <b>Yes</b> gives user access to previous and next transactions.
<b>ShowPreviousLink</b>	<b>Yes/No</b> -- <b>Yes</b> displays a link that calls the previous block of transactions.
<b>ShowStart</b>	First transaction to include in the response, counting back from the most recent.
<b>ShowEnd</b>	Last transaction to include in the response, counting back from the most recent.
<b>ShowNextLink</b>	<b>Yes/No</b> -- <b>Yes</b> displays a link that calls the next block of transactions.

Param name	Definition
<b>NextStartPosition</b>	Transaction at the beginning of the next block, counting back from the most recent.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1</b> to <i>ErrCount</i> ) values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the transaction history for account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetTransHistory&
uid=resellid&pw=resellpw&responsetype=xml
```

By default, the response gives a summary of the 25 most recent transactions:

```
<?xml version="1.0" ?>
<interface-response>
  <GetTransHistory>
    <FName>John</FName>
    <LName>Doe</LName>
    <PartyID>{BB4A2DE1-6485-45CB-A4FC-EE39BA0C1629}</PartyID>
    <RecordCount>38</RecordCount>
    <TransHistory>
      <Transaction>
        <Trans-Date>7/31/2002 11:12:17 AM</Trans-Date>
        <Amount>-$17.90</Amount>
        <TransDescription>Order</TransDescription>
        <OrderID>156094996</OrderID>
        <TransType>1</TransType>
        <OrderProcessFlag>True</OrderProcessFlag>
        <LinkValue>OrderDetail.asp?OrderID=156094996&OrderProcess=New</LinkValue>
        <Balance>$3,587.85</Balance>
        <ComBalance />
        <TransStatus>Successful</TransStatus>
      </Transaction>
      <Transaction>
        <Trans-Date>7/30/2002 4:52:21 PM</Trans-Date>
        <Amount>-$17.90</Amount>
        <TransDescription>Order</TransDescription>
        <OrderID>156091992</OrderID>
        <TransType>1</TransType>
        <OrderProcessFlag>True</OrderProcessFlag>
        <LinkValue>OrderDetail.asp?OrderID=156091992&OrderProcess=New</LinkValue>
        <Balance>$3,605.75</Balance>
        <ComBalance />
      </Transaction>
    </TransHistory>
  </GetTransHistory>
</interface-response>
```

```

    <TransStatus>Successful</TransStatus>
  </Transaction>
  .
  .
  .

# GetWebHostingAll

---

## Description

### Definition

Retrieve reseller keys for Registry Rocket accounts.

### Usage

Use this command to retrieve reseller keys for Registry Rocket accounts.

Do not use this command to retrieve prices, because the prices returned here may be obsolete. Instead, use one of the **PE\_Get\*** pricing commands.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

In the **Registry Rocket Settings** box at the bottom of the page, the **ResellerKey** line posts the return value from the **GetWebHostingAll** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ResellerKey</b>	Registry Rocket reseller key
<b>HostPrice</b>	Price when this Registry Rocket account was created; likely to be obsolete. For current pricing, use one of the PE_Get* commands.
<b>CCPrice</b>	Price when this Registry Rocket account was created; likely to be obsolete. For current pricing, use one of the PE_Get* commands.
<b>InfoPrice</b>	Price when this Registry Rocket account was created; likely to be obsolete. For current pricing, use one of the PE_Get* commands.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves a list of the reseller keys for account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=GetWebhostingAll&uid=resellid&pw=resellpw&responsetype=xml
```

In the response, the results for **ResellerKey** and the **ErrCount** of **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RocketLink>
    <ResellerKey>0CYF3Z5HBBVLBJSAP1RU7BAY6</ResellerKey>
    <HostPrice>17.95</HostPrice>
    <CCPrice>27.95</CCPrice>
    <InfoPrice>27.95</InfoPrice>
    <PictureURL />
    <ContactEmail>john.doe@resellerdocs.com</ContactEmail>
    <CompanyName>Reseller Documents Inc.</CompanyName>
    <Referrer>http://www.resellerdocs.com</Referrer>
  </RocketLink>
  <Command>GETWEBHOSTINGALL</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>0</IsLockable>
  <IsRealTimeTLD>0</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
```

```
</debug>

# GetWhoisContact

---

## Description

### Definition

Get whois contact information for a domain name.

### Usage

Use this command to get contact information for any domain name registered through eNom or its resellers.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

<http://resellertest.enom.com>

On the **enom.com** home page, the **Whois** link at the top of the page calls the **GetWhoisContact** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>ContactType</b>	Type of contact data being returned
<b>RegistrantOrganization</b>	Organization information
<b>RegistrantFName</b>	First name

Param name	Definition
<b>RegistrantLName</b>	Last name
<b>RegistrantAddress1</b>	Address line 1
<b>RegistrantAddress2</b>	Address line 2
<b>RegistrantCity</b>	City
<b>RegistrantStateProvince</b>	State or province
<b>RegistrantPostalCode</b>	Postal Code
<b>RegistrantCountry</b>	Country
<b>RegistrantPhone</b>	Phone number
<b>RegistrantFax</b>	Fax number
<b>RegistrantEmailAddress</b>	Email address
<b>Whoisregistrar</b>	Registrar for the name
<b>Whoisupdated-by</b>	Registrar that last updated the WhoIs info
<b>Whoisstatus</b>	Status of the name
<b>Whoisupdated-date</b>	Date of last update
<b>Whoiscreated-date</b>	Creation date for the name
<b>Whoisregistration-expiration-date</b>	Current expiration date
<b>Whoiscreated-by</b>	Registrar that created the information for the name
<b>WhoisnameserverCount</b>	Number of name servers associated with this name
<b>WhoisnameserverX</b>	Name servers. The response is indexed $X = 1$ to <i>NameServerCount</i> if <b>ResponseType=text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- If additional contact types are returned other than Registrant they will be "ContactType" Technical, Administrative or Billing.

## Example

The following query requests the whois contact information for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=getwhoiscontact&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
```

```

<GetWhoisContacts>
  <domainname sld="resellerdocs" tld="com">resellerdocs.com</domainname>

# GetWPPSInfo

---

## Description

### Definition

Retrieve the ID Protect (Whois privacy protection) status and contact information for a domain name.

### Usage

Use this command to retrieve ID Protect status for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/domains/DomainDetail.asp?DomainNameID=152533676>

In the **id protect** section, the **configure** button calls the **GetWPPSInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Domain name
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>DomainNameID</b>	Domain name ID number, from our database
<b>WPPSAllowed</b>	Whether ID Protect is available for this TLD
<b>WPPSExists</b>	Whether this domain has an ID Protect subscription
<b>WPPSEnabled</b>	Whether ID Protect is enabled for this domain
<b>WPPSExpDate</b>	Expiration date for this domain's ID Protect subscription
<b>WPPSAutoRenew</b>	Whether auto-renew is enabled for this domain's ID Protect subscription
<b>WPPSPrice</b>	Yearly fee for this domain's ID Protect subscription
<b>ContactType</b>	The contact type for this set of contact information
<b>Organization</b>	The organization name for this contact
<b>FName</b>	First name for this contact
<b>LName</b>	Last name for this contact
<b>Address1</b>	Address, first line, for this contact
<b>Address2</b>	Address, second line, for this contact
<b>City</b>	City for this contact
<b>StateProvince</b>	State or province for this contact
<b>PostalCode</b>	Postal code for this contact
<b>Country</b>	Country for this contact
<b>Phone</b>	Phone number for this contact
<b>Fax</b>	Fax number for this contact
<b>EmailAddress</b>	Email address for this contact
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests ID Protect settings for **resellerdocs.com** and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=GetWPPSInfo&
uid=resellid&pw=resellpw&slid=resellerdocs&tld=com&ResponseType=XML
```

In the response, the ID Protect status information, and the **ErrCount** value **0**, confirm that the query was successful:

```

<?xml version="1.0" ?>
<interface-response>
  <GetWPPSInfo>
    <domainname sld="resellerdocs" tld="com" domainnameid="152533676">

# InsertNewOrder

---

## Description

### Definition

Insert a checkout order of items in the shopping cart.

### Usage

Use this command if you use our shopping cart technology.

This command checks out the items in a shopping cart that are in **A** status, and puts the order in a queue.

[Purchase](#), a similar command, completes the purchase of selected products in real time, without using our shopping cart or waiting for the order processing queue.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/Checkout.asp>

On the **checkout** page, the **purchase** button calls the **InsertNewOrder** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- If the shopping cart is empty, **ItemCount** must equal **1** or the query will return an error message.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>EndUserIP</b>	Required	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>ItemCount</b>	Optional	Number of items ready to purchase. All with a status of A	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests purchase of the contents of the shopping cart, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=insertneworder&
uid=resellid&pw=resellpw&EndUserIP=127.0.0.1&responsetype=xml
```

The response confirms a successful checkout by sending an order ID number

```
<?xml version="1.0" ?>
<interface-response>
  <OrderID>156062745</OrderID>
  <ProdType10>10</ProdType10>
  <Command>INSERTNEWORDER</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# MakeResellerAccount

---

## Description

### Definition

Convert a retail account to reseller status.

### Usage

Use this command to convert one of your retail subaccounts to reseller status.

Note that once a subaccount is converted to reseller status, it cannot be converted back to retail status.

This command differs from the [GetSubAccountDetails](#) command in that the **MakeResellerAccount** command allows you to set only the account type; it does not require you to simultaneously set all TLD prices.

To cover all the functionality of the [GetSubAccountDetails](#) command without its restrictions, use **MakeResellerAccount**, [SetResellerTLDPricing](#), and [SetResellerServicesPricing](#).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- This command will only convert subaccounts of the login ID supplied in the query.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SubUID</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Login ID of the subaccount to set pricing for.	20
<b>Account</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Account ID number of the subaccount to convert from retail to reseller, in <i>NNN-aa-NNNN</i> format. To retrieve the subaccount ID number, use the <a href="#">GetSubAccounts</a> command.	11
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query converts the subaccount with ID **107-mu-2729** from retail to reseller status, and sends the response in **XML** format:

```
http://resellertest.enom.com/Interface.asp?Command=MakeResellerAccount&
UID=resellid&pw=resellpw&account=107-mu-2729&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>MAKERESSELLERACCOUNT</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <ExecTime>0.6328125</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# ModifyNS

---

## Description

### Definition

Modify name servers for a domain name.

### Usage

Use this command if you want to use name servers that are different than the name servers currently set for a domain.

**ModifyNS** updates DNS records at the Registry and in the registrar's database. [ModifyNSHosting](#), a similar command, redirects to another set of name servers without updating the Registry records.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DNSConfig.asp?DomainNameID=152533676>

On the **Domain Name Maintenance** page, the **save changes** button calls the **ModifyNS** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The query must pass name servers that are registered at NSI.
- Name servers for .us names must be located in the United States.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63

Param name	Obligation	Definition	Max size
<b>TLD</b>	<b>Required</b>	Top-level domain name (extension)	15
<b>UseDNS</b>	Either <b>UseDNS</b> or <b>NSX</b> is <b>Required</b>	Which name servers a domain is using; <b>Default</b> indicates eNom's name servers	4
<b>NSX</b>	Either <b>UseDNS</b> or <b>NSX</b> is <b>Required</b>	Name server <i>X</i> —maximum of 12 can be set. Permitted value is the use name of the name server, for example, <b>NS1=ns1.name-services.com</b>	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- To set name servers to eNom's set the **UseDNS=ours** param and don't pass **NS(x)** name servers. To set name servers to your name servers, set **NSX=YourNameServerX** and don't pass **UseDNS=default**. You can set up to 12 of your own name servers.

## Example

The following query changes the name servers for **resellerdocs.com** to **ns1.name-services.com** and **ns2.name-services.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=modifyns&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
ns1=ns1.name-services.com&ns2=ns2.name-services.com&responsetype=xml
```

The response confirms that the change of name servers was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <reg-lock>1</reg-lock>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>MODIFYNS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
```

```
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

## Related commands

# ModifyNSHosting

## Description

### Definition

Modify the name-server redirect settings for a domain name.

### Usage

**ModifyNSHosting** redirects to another set of name servers without updating the Registry records. **ModifyNS**, a similar command, updates name server records at the Registry and in the registrar's database.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The name server cited in the query must exist.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>NSX</b> X=1 to 12	Required	Name server—maximum of 12 can be set	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query designates **ns1.name-services.com** as the name server for **resellerdocs.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=modifynshosting&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
ns1=ns1.name-services.com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
- <interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>MODIFYNSHOSTING</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
- <debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

## Related commands

---

# ModifyPOP3

---

## Description

### Definition

Modify POP account password.

### Usage

Use this command to change the password of one or more POP3 mail accounts in a domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/POPConfig.asp?DomainNameID=152533676>

On the **Domain Name Maintenance** page, in the **Edit POP mail accounts** box, typing a new password and clicking the **add to cart** button to save modifications calls the **ModifyPOP3** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The POP3 service need not be active for the password change to be successful.
- The values of **UserName** in the query must exist for the domain.
- The value for **EmailCount** must match the number of **UserNames** and **Passwords** in the query.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

Param name	Obligation	Definition	Max size
<b>EmailCount</b>	<b>Required</b>	Number of accounts on this domain to update.	2
<b>UserNameX</b> X= <b>1</b> to <i>EmailCount</i>	<b>Required</b>	POP3 user name to update the password on.	16
<b>PasswordX</b> X= <b>1</b> to <i>EmailCount</i>	<b>Required</b>	New password for the POP3 account.	16

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that two POP3 passwords change in **resellerdocs.com**: user name **john** should now have password **johnpw** and user name **jane** should now have password **janepw**. The query also requests that the response be in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=modifypop3&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&emailcount=2&
username1=john&password1=johnpw&username2=jane&password2=janepw&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>MODIFYPOP3</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# ParseDomain

---

## Description

### Definition

Separate the domain name into its host, SLD, and TLD.

### Usage

Use this command to separate a domain name into its constituent parts.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>PassedDomain</b>	Required	Full name to parse, including the third level if appropriate	70
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Host</b>	Host name
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query separates the domain name **www.resellerdocs.com** into its **Host**, **SLD**, and **TLD**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=parsedomain&
uid=resellid&pw=resellpw&passeddomain=www.resellerdocs.com&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <ParseDomain>
    <Host>www</Host>
    <SLD>resellerdocs</SLD>
    <TLD>com</TLD>
  </ParseDomain>

---

# PE\_GetCustomerPricing

---

## Description

### Definition

Get retail prices that this account charges to consumers. These are also the prices that this account's subaccounts will be charged, unless you change them for each individual subaccount.

### Usage

Use this command to retrieve prices that you have changed from their default values.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-List.asp>

If you click a Login ID of a retail subaccount, the link calls the **PE\_GetCustomerPricing** command. If you click a Login ID of a reseller subaccount, the link calls the [PE\\_GetResellerPrice](#) command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ProductType</b>	Required	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce	3

## Returned parameters and values

Param name	Definition
<b>CPID</b>	Pricing engine index, for use by eNom's database.
<b>ProductType</b>	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce
<b>ProductDescription</b>	Product description. Values are listed under <b>ProductType</b> , above.
<b>TLDID</b>	Top-level-domain ID number.
<b>TLD</b>	Top-level domain name.
<b>RetailPrice</b>	Retail price. Response contains a value only if price overrides the default value.
<b>ResellerPrice</b>	Reseller price.
<b>RocketPrice</b>	Registry Rocket price. Response contains a value only if price overrides the default value.
<b>Enabled</b>	Enabled state for this TLD. Options are <b>True</b> or <b>False</b> .
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the price that subaccount **olerud** charges for **transferring** a **.org** domain name, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETCUSTOMERPRICING&
uid=olerud&pw=olerudpw&ProductType=19&tld=org&responsetype=xml
```

The response indicates that the price for transferring a .org name is **\$8.95**, and .org transfers are **enabled** in this subaccount:

```
<?xml version="1.0" ?>
<interface-response>
  <productstructure>
    <product>
      <cpid>256759</cpid>
      <producttype>19</producttype>
      <productdescription>Transfer</productdescription>
      <tldid>2</tldid>
      <tld>org</tld>
      <retailprice />
      <resellerprice>8.95</resellerprice>
      <rocketprice />
      <enabled>True</enabled>
    </product>
  </productstructure>
  <Command>PE_GETCUSTOMERPRICING</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# PE\_GetDomainPricing

---

## Description

### Definition

Get the retail pricing that this account charges for registrations, renewals, and transfers, by top-level domain.

### Usage

Use this command when you want a list of retail prices for one top-level domain, for registrations, renewals, and transfers. To get a list of retail prices for all products offered by this account, use [PE\\_GetRetailPricing](#).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-Manage.asp?Account=850-tn-1053>

**PE\_GetDomainPricing** is not implemented on **enom.com**. The **sub-account configuration** page displays similar information, but for all top-level domains.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the pricing for account **resellid** for the various top-level domains, with the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETDOMAINPRICING&
uid=resellid&pw=resellpw&responsetype=xml
```

The response indicates that the price of **.com** domains is **\$8.95** per year, **.net** is **\$8.95** per year, and so on:

```
<?xml version="1.0" ?>
<interface-response>
  <pricestructure>
    <product>

# PE\_GetPOPPrice

---

## Description

### Definition

Retrieve the wholesale price that this account pays for POP mail 10-paks.

### Usage

Use this command to retrieve the wholesale price that this account pays for POP mail 10-paks.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/ProductPricing.asp?tab=domainaddons>

In the **POP3 email paks** row, the value in the **Your cost** column is supplied by the **PE\_GetPOPPrice** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Pop</b>	Wholesale price this account pays per POP 10-pak
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the wholesale price that account **resellid** pays for a POP 10-pak, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETPOPPRICE&
uid=resellid&pw=resellpw&responsetype=xml
```

In the response, a **pop pricing** value and an **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <pricing>
    <pop>18.4015</pop>
  </pricing>
  <Command>PE_GETPOPPRICE</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable />
  <IsRealTimeTLD />
  <TimeDifference>+0.00</TimeDifference>
  <ExecTime>8.203125E-02</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PE\_GetProductPrice

---

## Description

### Definition

Retrieve the wholesale cost that this account pays for a product.

### Usage

Use this command to retrieve wholesale pricing information for a single product.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/RenewalPricing.asp?tab=1>

Each value in the **Your Cost** column could be retrieved using one call to the **PE\_GetProductPrice** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ProductType</b>	Required	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce	63

Param name	Obligation	Definition	Max size
<b>TLD</b>	<b>Required</b> if ProductType is <b>10, 16, or 19</b>	Top-level domain name (extension)	15
<b>Years</b>	Optional; default value is <b>1</b>	Year bracket for which to retrieve prices. Permitted values are <b>1, 2, 5</b> , and <b>10</b> . For example, <b>Years=2</b> retrieves prices for registrations of 2 to 4 years.	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Price</b>	Wholesale price that the UID pays for this product
<b>ProductEnabled</b>	Enabled status of this product
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the price for registering a **.com** domain, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETPRODUCTPRICE&
uid=resellid&pw=resellpw&ProductType=10&tld=com&responsetype=xml
```

In the response, a price and an enabled status for the product confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <productprice>
    <price>8.95</price>
    <productenabled>True</productenabled>
  </productprice>
  <Command>PE_GETPRODUCTPRICE</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
```

```
<IsRealTimeTLD>True</IsRealTimeTLD>
<TimeDifference>+03.00</TimeDifference>
<ExecTime>0.1015625</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# PE\_GetResellerPrice

---

## Description

### Definition

Get the wholesale price that this account pays for one product, and tell whether that product is enabled.

### Usage

Use this command to retrieve the price of one product. For example, you can use this command to retrieve the price you pay for **registering** a **.com** name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-List.asp>

On the **home > pricing info** page, each individual price can be retrieved using **PE\_GetResellerPrice**.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ProductType</b>	Required	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce	3
<b>TLD</b>	Required for ProductType <b>10, 16, or 19</b>	If the <b>ProductType</b> is <b>10, 16, or 19</b> , specify the TLD for which you want pricing information.	20

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the price for registration of a **.org** domain name, and requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETRESELLERPRICE&
uid=resellid&pw=resellpw&tld=org&ProductType=10&responsetype=xml
```

The response indicates that a **.org** domain name is **\$8.95** per year:

```
<?xml version="1.0" ?>
<interface-response>
  <productprice>
    <price>8.95</price>
    <productenabled>True</productenabled>
  </productprice>
  <Command>PE_GETRESELLERPRICE</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PE\_GetRetailPrice

---

## Description

### Definition

Get the Retail pricing for a specified product, and tell whether the product is enabled. The Retail price is the price you charge to your retail customers; it is also the price you charge your subaccounts unless you set prices specifically for each subaccount using commands such as [UpdateAccountPricing](#), [GetSubAccountDetails](#), or [PE\\_SetPricing](#).

### Usage

Use this command to retrieve pricing for a single product. For example, you can use this command to retrieve the price for **renewing a .org** name that you currently have set for one retail subaccount.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-Manage.asp?Account=850-tn-1053>

**PE\_GetRetailPrice** is not implemented on **enom.com**. The **sub-account configuration** page displays similar information, but for all top-level domains and for registering, renewing, and transferring domains.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ProductType</b>	Required	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce	3
<b>TLD</b>	Optional	If <b>ProductType</b> is <b>10</b> , <b>16</b> , or <b>19</b> , include the TLD for which you want the retail price setting.	20

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the price for registering a .org name, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETRETAILPRICE&
uid=resellid&pw=resellpw&ProductType=10&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <productprice>
    <price>29.95</price>
    <productenabled>True</productenabled>
  </productprice>
  <Command>PE_GETRETAILPRICE</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PE\_GetRetailPricing

## Description

### Definition

Retrieve the retail prices that this account charges for all products, and their enabled status.

“Retail” prices apply to retail customers of this account. They also apply to any subaccounts in which the prices the subaccount pays have not been set for that individual subaccount using a command such as [UpdateAccountPricing](#), [GetSubAccountDetails](#), or [PE\\_SetPricing](#).

### Usage

Use this command to display the full list of retail prices for this account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

On the **my enom > settings** page, the **Default Account/Sub-Account Pricing** section displays the query results for **PE\_GetRetailPricing**.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Years</b>	Optional; default value is <b>1</b>	Year bracket for which to retrieve prices. Permitted values are <b>1</b> , <b>2</b> , <b>5</b> , and <b>10</b> . For example, <b>Years=2</b> retrieves prices for registrations of 2 to 4 years.	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TLD</b>	Top-level domain name (extension)
<b>TLDID</b>	Our ID number for this TLD
<b>ProductType</b>	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the prices that account **resellid** is charging for all products, and whether the products are enabled. It also requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?uid=resellid&pw=resellpw&
command=PE_GetRetailPricing&responsetype=xml
```

The response lists the prices for all products, and tells whether they are offered in this account:

```
<?xml version="1.0" ?>
<interface-response>
  <pricestructure>
    <tld>
      <tld>com</tld>
      <tldid>0</tldid>

# PE\_GetRocketPrice

## Description

### Definition

Get the pricing and enabled state for a Registry Rocket key.

### Usage

Use this command to get the price for one product, for one top-level domain. For example, you can use this command to retrieve the price for **renewing** a **.org** name. This command is most useful to resellers who offer a restricted set of top-level domains.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/CCProcessingSignUp.asp>

This command is not implemented on enom.com. However, on the **registry rocket** page, the **create link** button returns similar information.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TLD</b>	Required	Top-level domain (extension, e.g. com) for which you want information.	15
<b>ProductType</b>	Required	Product type. Options are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>19</b> transfer	3
<b>ResellerKey</b>	Required	Unique key created for each Registry Rocket site.	40
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Product types are: **10**=register, **13**=hosting, **14**=hosting renew, **16**=renew, **19**=transfer.

## Example

The following query requests the Registry Rocket price for **.org** domain names, with response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GetRocketPrice&
uid=resellid&pw=resellpw&tld=org&ProductType=10&responsetype=xml
```

The response indicates that the price for .org names is **\$29.95** per year, and sales of **.org** are enabled:

```
<?xml version="1.0" ?>
<interface-response>
  <productprice>
    <price>29.95</price>
    <productenabled>True</productenabled>
  </productprice>
  <Command>PE_GETROCKETPRICE</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>eNom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PE\_GetTLDID

---

## Description

### Definition

Retrieve the ID number for a TLD.

### Usage

Use this command to retrieve the ID number for a TLD.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TLDID</b>	ID number for the TLD specified in the query string.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the ID number for the **.org** TLD, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_GETTLDID&
uid=resellid&pw=resellpw&tld=org&responsetype=xml
```

In the response, a value for the **TLDID** parameter confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <productid>
    <tldid>2</tldid>
  </productid>
  <Command>PE_GETTLDID</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <TimeDifference>+07.00</TimeDifference>
  <ExecTime>0.1015625</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

[PE\\_SetPricing](#)

[SetResellerTLD Pricing](#)

---

# PE\_SetPricing

---

## Description

### Definition

Set retail prices that this account charges for all products, or set the wholesale price for a single product for a single subaccount.

### Usage

Use this command to set retail pricing for all products that this account offers. You can also set the wholesale price for a single product for a single subaccount.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/renewalpricing.asp>

On the **my enom** > **settings** page, scroll to the **Default Account/Sub-Account Pricing** section and click **change**. You can use **PE\_SetPricing** to set the price of any or all products.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TLD</b>	Required for <b>ProductType</b> 10, 13, 14, 16, 19	Top-level domain name (extension) to set pricing for	15
<b>PartyID</b>	If setting subaccount prices, either <b>PartyID</b> or <b>LoginID</b> is Required	Party ID of the subaccount to set pricing for	40

Param name	Obligation	Definition	Max size
<b>LoginID</b>	If setting subaccount prices, either <b>PartyID</b> or <b>LoginID</b> is <b>Required</b>	Login ID of the subaccount to set pricing for	20
<b>Years</b>	Optional; default is <b>1</b>	Year-bracket to set prices for. For example, <b>Years=2</b> sets the annual price for domain name registrations of 2 to 4 years; <b>Years=5</b> sets the annual price for 5 to 9 years. Permitted values are <b>1, 2, 5</b> , and <b>10</b> . You can use only one Years parameter per query.	2
<b>ProductTypeX</b> X= <b>1, 2, 3, . . .</b>	<b>Required</b>	Product type. Permitted values are: <b>10</b> register <b>13</b> hosting <b>14</b> host renew <b>16</b> renew <b>17</b> domain redemption grace period (RGP) <b>18</b> domain Extended RGP (available at our discretion, and decided by us on a name-by-name basis) <b>19</b> transfer <b>20</b> SSL certificate - GeoTrust QuickSSL Premium <b>21</b> SSL certificate - GeoTrust True BusinessID <b>26</b> SSL certificate - GeoTrust QuickSSL <b>27</b> SSL certificate - GeoTrustTrueBizID Wildcard <b>35</b> 10MB additional storage for POP pak - renewal <b>36</b> 10MB additional storage for POP pak <b>38</b> POP mail 10-pak <b>39</b> POP mail 10-pak renewal <b>41</b> .name registration and email forwarding by the .name Registry <b>42</b> .name email forwarding by the .name Registry <b>44</b> .name registration and email forwarding renewal <b>45</b> email forwarding by us <b>46</b> email forwarding by us - renewal <b>47</b> URL forwarding <b>48</b> URL forwarding - renewal <b>50</b> Web hosting account with Access database <b>51</b> Web hosting component - 1GB bandwidth <b>52</b> Web hosting component - 50MB Web storage <b>53</b> Web hosting component - 50MB SQL database storage <b>54</b> Web hosting component - 10 POP mailboxes <b>55</b> Web hosting setup fee <b>56</b> Web hosting bandwidth, at per-100MB "overage protection" rate <b>57</b> Web hosting bandwidth overage fee, with upgrade <b>58</b> Web hosting component - 10MB POP storage <b>65</b> private label annual subscription <b>66</b> private label annual renewal <b>72</b> ID Protect (Whois Privacy Protection) <b>73</b> ID Protect - renewal <b>77</b> Web monitor <b>81</b> Traffic Vista - 100,000 page views <b>82</b> Traffic Vista - 50,000 page views overage fee <b>90</b> WebSite Creator - Basic <b>91</b> WebSite Creator - Full <b>92</b> WebSite Creator - eCommerce	3

Param name	Obligation	Definition	Max size
<b>EnabledX</b> X=1, 2, 3, . . .	Optional	Enable or disable the product type. Set = <b>1</b> to enable or = <b>0</b> to disable.	1
<b>PriceX</b> X=1, 2, 3, . . .	Optional; use when setting retail prices for this UID	Set the product price. Use format <i>DD.cc</i> .	1000.00
<b>ResellerPrice</b>	Optional; use when setting one wholesale price for one subaccount	Reseller price for this product type. If you use this parameter, you can reset the reseller price for only one product per query. If you use this parameter, use parameters <b>ProductType</b> and <b>Enabled</b> rather than <b>ProductTypeX</b> and <b>EnabledX</b> .	1000.00
<b>RetailPrice</b>	Optional; use when setting one retail price for this UID	Retail price for this product type. If you use this parameter, you can reset the retail price for only one product per query. If you use this parameter, use parameters <b>ProductType</b> and <b>Enabled</b> rather than <b>ProductTypeX</b> and <b>EnabledX</b> .	1000.00
<b>RocketPrice</b>	Optional	Registry Rocket price for this product type	1000.00
<b>ResellerKey</b>	<b>Required</b> if setting a Registry Rocket price	Registry Rocket key	40

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Either **LoginID** or **PartyID** is required. If **LoginID** is passed in then it will override the **PartyID** if it is also passed in.
- At least one **Price** must be supplied.

## Example

The following query requests that the retail price for **registering .org** names be set at **\$44.00** and for **renewing .org** names **\$45.00**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PE_SetPricing&
uid=resellid&pw=resellpw&ProductType1=10&TLD1=org&
Enabled1=1&Price1=44&ProductType2=16&TLD2=org&Enabled2=1&
Price2=45&responsetype=xml
```

In the response, the **Status Successful** and **Errcount 0** confirm that the query successfully reset 2 prices:

```
<?xml version="1.0" ?>
<interface-response>
  <Count>2</Count>
  <Status>Successful</Status>
  <Command>PE_SETPRICING</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# Preconfigure

---

## Description

### Definition

Configure the extended attributes for the Active domains in a shopping cart. Most commonly, extended attributes are added for certain country codes, including **.us**, **.ca**, **.co.uk**, and **.org.uk**.

### Usage

Use this command when registering domains that require extended attributes.

This command operates only if you use our shopping cart, and only on the domains in the cart that have status Active.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/PreConfigure.asp>

With a configurable domain in the cart, click the **configure** button below the list of cart contents. On the **Pre-configure** page, one or more **specific information** boxes contain text boxes that set values for the **Configure** command when you click **save changes**.

## Constraints

The query must meet the following requirements:

- This command operates only if you use our shopping cart, and only on the domains in the cart that have status Active.
- The login ID and password must be valid.
- There must be at least one configurable domain in the cart.
- The extended attributes (configuration parameters) you provide in the query must match those required for the current TLD. For example, configuring a **.us** name requires that you provide the attributes for **.us**, not those for **.ca**.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Load</b>	Required for .us, .ca, .co.uk, and .org.uk	<b>1</b> use the previously configured values for all preconfiguration information <b>2</b> submit new preconfiguration information (contacts, name servers, extended attributes)	1
<i>ExtendedAttributes</i>	Required for some country codes	Data required by the Registry for some country codes. Use <a href="#">GetExtAttributes</a> to determine whether this TLD requires extended attributes.	varies
<b>AutoRenew</b>	Required	Set to auto-renew? Permitted values are: <b>1</b> Set the preconfigured domains to renew automatically (recommended) <b>0</b> Set the domains to not auto-renew	1
<b>RegLock</b>	Required	Set registrar lock? Permitted values are: <b>1</b> Set the preconfigured domains to registrar lock (recommended, to prevent unauthorized transfers) <b>0</b> Do not lock the domains	1
<b>IDNX</b> <i>X = 1 to NumberOfLanguages</i>	Required for PUNY-encoded names that use characters other than the English alphabet, Arabic numbers, and hyphen	International Domain Name code for each language used by a domain in the cart that has status Active. To retrieve the Active domains in the cart, use command <a href="#">GetCartContent</a> . For a list of IDN codes, go to <a href="http://www.enom.com/resellers/newdocumentation.asp">http://www.enom.com/resellers/newdocumentation.asp</a>	3
<b>PreConfigDNS</b>	Required	Which name servers this domain uses: <b>default</b> our name servers <b>other</b> name servers specified in this query using the NSX parameter	7
<b>NSX</b> <i>X=1 . . . 12</i>	Required if you want to use name servers other than ours	Names of the name servers a domain is using. Maximum of 12 name servers.	63
<b>UseHostRecords</b>	Optional	Use host records provided in this query string. Permitted values are: <b>0</b> Use this account's default host records <b>1</b> Store the host records provided in this string	1
<b>HostNameX</b>	Optional	Name of host record X, for example, <b>www</b>	60

Param name	Obligation	Definition	Max size
<b>RecordTypeX</b>	Optional	Record type of host record X. Permitted values are: <b>A</b> Address <b>MXE</b> Mail Easy (email forwarding) <b>MX</b> Mail. Can be a host name under this domain name or the name of a mail server <b>CNAME</b> Alias record type, to associate a host name with another host <b>URL</b> URL redirect <b>FRAME</b> Frame redirect <b>TXT</b> Text record	5
<b>AddressX</b>	Optional	Address to redirect to. If <b>RecordTypeX=A</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MXE</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MX</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=CNAME</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=URL</b> , <b>AddressX</b> must be the exact URL of the page you redirect to, or an IP address, or a fully qualified domain name (see Note) If <b>RecordTypeX=FRAME</b> , <b>AddressX</b> is the actual URL, or the IP address, or the fully qualified domain name (see Note) of the page you want to display when someone types <i>Your_Domain.com</i> If <b>RecordTypeX=TXT</b> , <b>AddressX</b> is a text record. For help writing an SPF record, you can go to <a href="http://spf.pobox.com/wizard.html">http://spf.pobox.com/wizard.html</a>	260
<b>AccessPassword1</b>	Optional	Domain name password	50
<b>AccessPassword2</b>	Optional	Domain name password. Must be identical to <b>AccessPassword1</b> .	50
<b>OptContactReg</b>	Optional	<b>1</b> indicates Billing contact information should be used as Registrant contact information	1
<b>OptTechnical</b>	Optional	<b>1</b> indicates Billing contact information should be used as Technical contact information	1
<b>OptAdministrative</b>	Optional	<b>1</b> indicates Billing contact information should be used as Administrative contact information	1
<b>OptContactAux</b>	Optional	<b>1</b> indicates Billing contact information should be used as Auxiliary contact information	1

Param name	Obligation	Definition	Max size
<i>ContactType</i> <b>Org</b>	Optional	Name of <i>ContactType</i> 's organization. <i>ContactType</i> can be <b>REGISTRANT</b> , <b>AUXBILLING</b> , <b>TECH</b> , <b>ADMIN</b> . You can pass parameters for 0 to 4 contact types.	60
<i>ContactType</i> <b>JobTitle</b>	Optional	<i>ContactType</i> 's job title	60
<i>ContactType</i> <b>FName</b>	Optional	<i>ContactType</i> 's first name	60
<i>ContactType</i> <b>LName</b>	Optional	<i>ContactType</i> 's last name	60
<i>ContactType</i> <b>Address</b>	Optional	<i>ContactType</i> 's address	60
<i>ContactType</i> <b>Address2</b>	Optional	<i>ContactType</i> 's address, second line	60
<i>ContactType</i> <b>City</b>	Optional	<i>ContactType</i> 's city	60
<i>ContactType</i> <b>State</b>	Optional	<i>ContactType</i> 's state	60
<i>ContactType</i> <b>Province</b>	Optional	<i>ContactType</i> 's province	60
<i>ContactType</i> <b>StateProvinceChoice</b>	Optional	<i>ContactType</i> 's state or province choice. Use value <b>S</b> if <i>ContactType</i> <b>State</b> is a state; use <b>P</b> if <i>ContactType</i> <b>State</b> is a province.	1
<i>ContactType</i> <b>Zip</b>	Optional	<i>ContactType</i> 's postal code	16
<i>ContactType</i> <b>Country</b>	Optional	<i>ContactType</i> 's country. Permitted format is 2-letter country code	60
<i>ContactType</i> <b>Phone</b>	Optional	<i>ContactType</i> 's phone number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters	17
<i>ContactType</i> <b>PhoneExt</b>	Optional	<i>ContactType</i> 's phone extension	6
<i>ContactType</i> <b>Fax</b>	Optional	<i>ContactType</i> 's fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters	17
<i>ContactType</i> <b>Email</b>	Optional	<i>ContactType</i> 's email address	128
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>PreConfigSuccess</b>	<b>1</b> indicates no extended attributes required. <b>2</b> indicates query failed at Registry.
<b>Count</b>	Number of TLDs affected
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>IsLockable</b>	<b>0</b> indicates the domain is not lockable; <b>1</b> indicates the domain is lockable
<b>IsRealTimeTLD</b>	Indicates whether this is a TLD that registers in real time. <b>0</b> indicates no; <b>1</b> indicates yes.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- A fully qualified domain name is expressed in the format "*hostname.SLD.TLD*". Note that the period at the end is an essential component of a fully qualified domain name.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query supplies the extended attributes for **resellerdocs.us** and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=preconfigure&uid=resellid&pw=resellpw&
sld=resellerdocs&tld=us&Load=2&us_nexus=c11&us_purpose=p3&PreConfigDNS=default&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <PreConfigBillingInfo>
    <BillingOrganizationName>Reseller Documents Inc.</BillingOrganizationName>
    <BillingJobTitle>President</BillingJobTitle>
    <BillingFirstName>John</BillingFirstName>
    <BillingLastName>Doe</BillingLastName>
    <BillingAddress1>111 Main St.</BillingAddress1>
    <BillingAddress2 />
    <BillingCity>Hometown</BillingCity>
    <BillingStateProvince>WA</BillingStateProvince>
    <BillingStateProvinceChoice>S</BillingStateProvinceChoice>
    <BillingPostalCode>99999</BillingPostalCode>
    <BillingCountry>United States</BillingCountry>
    <BillingPhone>5555555555</BillingPhone>
    <BillingFax>5555555556</BillingFax>
    <BillingEmailAddress>john.doe@resellerdocs.com</BillingEmailAddress>
  </PreConfigBillingInfo>
  <PreConfigSuccess>2</PreConfigSuccess>
  .
  .
  .
  <Command>PRECONFIGURE</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

---

# PreRegAddList

---

## Description

### Definition

Add a list of names to preregister.

### Usage

Use this command to reserve a domain name before a top-level domain is open for real-time registrations. For example, if a new top-level domain **.store** had been approved but not opened yet, registrars might establish a queue -- a time-stamped waiting list -- for domain names using the **.store** TLD. Domain names on this list are preregistered.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This feature is implemented on enom.com only during preregistration periods for new TLDs.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The preregistration queue must be open.
- The domain name to preregister must meet the requirements for a valid domain name (see the requirements under the [Check](#) command).

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DomainList</b>	Required	Space-separated list of names.	1000
<b>Price</b>	Required	Price for each name.	8
<b>SubmitTimes</b>	Required	Set to <b>1</b> at all times.	3

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the domain name **resellmydocs.biz** be added to the preregistration queue for the **.biz** top-level domain, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=preregaddlist&
uid=resellid&pw=resellpw&
domainlist=resellmydocs.biz&price=30&submittimes=1&responsetype=xml
```

The response indicates that the **.biz** preregistration queue is closed:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>PREREGADDLIST</Command>
  <ErrCount>1</ErrCount>
  <errors>
    <Err1>The queue is now closed.</Err1>
  </errors>
  <Server>Dev</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

## Related commands

[AddBulkDomains](#)

---

# Purchase

---

## Description

### Definition

Purchase a domain name in real time.

### Usage

The **Purchase** command enables direct real-time purchases. The **Purchase** command bypasses the shopping cart and the queuing delay associated with it.

The **Purchase** command is typically used for a single-name purchase and returns an immediate success/failure response.

Most commonly, the **Purchase** command is used by resellers who maintain their own databases.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/Checkout.asp>

The **Purchase** command is not implemented on [www.enom.com](http://www.enom.com). However, on the **checkout** page, the **purchase** button calls [InsertNewOrder](#), a similar command that initiates checkout. The difference is that [InsertNewOrder](#) acquires contents of the shopping cart and puts them in a queue for checkout; the **Purchase** command bypasses the shopping cart and the queue.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- The domain name(s) to be purchased must be valid. (See requirements under the [Check](#) command.)
- eNom must be licensed to sell the names you attempt to register (eNom is not licensed with the Registries for all TLDs).
- Name servers for .us names must be located in the United States.
- .co.uk and .org.uk names must have at least two name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>IDNCode</b>	Optional for PUNY-encoded names that use characters other than the English alphabet, Arabic numbers, and hyphen	International Domain Name code for each language used by a domain in the cart that has status Active. To retrieve the Active domains in the cart, use command <a href="#">GetCartContent</a> . For a list of IDN codes, go to <a href="http://www.enom.com/resellers/newdocumentation.asp">http://www.enom.com/resellers/newdocumentation.asp</a>	3
<b>NumYears</b>	Optional	Number of years to register the name.	2
<b>ChargeAmount</b>	Optional	Amount to charge per year for the registration	6
<b>UseCreditCard</b>	Optional	If <b>UseCreditCard=yes</b> , use our credit-card-processing services	3
<b>EndUserIP</b>	Required if <b>UseCreditCard=yes</b>	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantOrganizationName</b>	Optional	Registrant organization	60
<b>RegistrantFirstName</b>	Required if <b>UseCreditCard=yes</b>	Registrant first name	60
<b>RegistrantLastName</b>	Required if <b>UseCreditCard=yes</b>	Registrant last name	60
<b>RegistrantJobTitle</b>	Required if param <b>RegistrantOrganizationName</b> is used	Registrant job title	60
<b>RegistrantAddress1</b>	Required if <b>UseCreditCard=yes</b>	Registrant Address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required if <b>UseCreditCard=yes</b>	Registrant city	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1

Param name	Obligation	Definition	Max size
<b>RegistrantStateProvince</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Registrant state or province	60
<b>RegistrantPostalCode</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Registrant postal code	16
<b>RegistrantCountry</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Registrant country, expressed as the two-character country code	60
<b>RegistrantEmailAddress</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Registrant email address	128
<b>RegistrantPhone</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Registrant phone. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFax</b>	<b>Required</b> if <b>RegistrantOrganizationName</b> is used	Registrant fax number. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>ExtendedAttributes</b>	<b>Required</b> for some country code TLDs	Data required by the Registry for some country codes. Use <a href="#">GetExtAttributes</a> to determine whether this TLD requires extended attributes.	varies
<b>CardType</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Type of credit card	20
<b>CCName</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Customer's credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card expiration month	2
<b>CreditCardExpYear</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card expiration year	4
<b>CVV2</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card billing address	60
<b>CCZip</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card billing postal code	15
<b>CCCountry</b>	<b>Required</b> if <b>UseCreditCard =yes</b>	Credit card billing country	60

Param name	Obligation	Definition	Max size
<b>UseDNS</b>	Either <b>UseDNS</b> or <b>NSX</b> is <b>Required</b>	Which name servers a domain is using; <b>default</b> indicates eNom's name servers	7
<b>NSX</b>	Either <b>UseDNS</b> or <b>NSX</b> is <b>Required</b>	Name server X—maximum of 12 can be set. Permitted value is the use name of the name server, for example, <b>NS1=ns1.name-services.com</b>	60
<b>UnLockRegistrar</b>	Optional; default value is <b>0</b>	Set = <b>1</b> to unlock or = <b>0</b> to lock the name.	1
<b>Renewname</b>	Optional; default value is <b>0</b>	Set = <b>1</b> to auto-renew the name.	1
<b>DomainPassword</b>	Optional; default value is <b>0</b>	Set a password on the domain name.	60
<b>EmailNotify</b>	Optional	Set = <b>1</b> to receive email notification of customer orders, set = <b>0</b> or don't use it otherwise.	1

## Returned parameters and values

Param name	Definition
<b>OrderID</b>	Order number if successful. We recommend that you store this number for future use.
<b>RRPCode</b>	Success code. Only a <b>200</b> indicates success.
<b>RRPText</b>	Text which accompanies and describes the <b>RRPCode</b> value.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- If using our credit card option ALL registrant and credit card information is required.
- Additional parameters for contact information can be passed by replacing **Registrant** in the parameter names above with **Tech**, **Admin** or **AuxBilling**.
- To set name servers to eNom's set the **UseDNS=ours** param and don't pass **NS(x)** name servers. To set name servers to your name servers, set **NSX=YourNameServerX** and don't pass **UseDNS=default**. You can set up to 12 of your own name servers.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- We recommend that you store the **OrderID** value—at least the most recent one for each domain—from the return. Several other commands use this value as a required input parameter.
- In the return, an **RRPCode** of **200** indicates a successful registration. Otherwise, check the return parameter **ErrCount**. If greater than **0** the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

- In the return, if the **RRPCode** value is **1300** and the **IsRealTimeTLD** value is **false**, then this is a non-real-time TLD. For these names, use the [GetOrderDetail](#) command roughly every 24 hours to check the progress of the registration.

## Example

The following query requests the purchase of domain name **resellerdocs2.net**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=Purchase&
uid=resellid&pw=resellpw&
sld=resellerdocs2&tld=net&RegistrantOrganizationName=Reseller%20Documents%20Inc.&
RegistrantFirstName=john&RegistrantLastName=doe&RegistrantAddress1=111%20Main%20St.&
RegistrantCity=Hometown&RegistrantStateProvince=WA&RegistrantStateProvinceChoice=S&
RegistrantPostalCode=98003&RegistrantCountry=United+States&
RegistrantEmailAddress=john%2Edoe%40resellerdocs%2Ecom&RegistrantPhone=+1.5555555555&
RegistrantFax=+1.5555555556&AuthQuestionType=smaiden&AuthQuestionAnswer=jones&
ResponseType=XML
```

The response includes the three components that indicate a successful transaction: an order ID indicates success at the registrar level, and the **RRPCode** value of **200** and RRP text with a success message indicate success at the Registry level:

```
<?xml version="1.0" ?>
<interface-response>
  <OrderID>156094996</OrderID>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully - 156094996</RRPText>
  <Command>PURCHASE</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

---

# PurchaseHosting

---

## Description

### Definition

Subscribe to our domain name hosting services, while leaving the registration of the domain name at another registrar. This is a real-time command.

### Usage

Use this command to purchase domain name hosting services in real time, while leaving the registration of a domain name at another registrar.

To purchase DNS hosting using the shopping cart and order queue, use the [AddToCart](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>NumYears</b>	Optional	Number of years to register the name	2
<b>ChargeAmount</b>	Optional	Amount to charge per year for the registration	6
<b>UseCreditCard</b>	Optional	If <b>UseCreditCard=yes</b> , use our credit-card-processing services	3

Param name	Obligation	Definition	Max size
<b>EndUserIP</b>	Required if <b>UseCreditCard =yes</b>	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantOrganizationName</b>	Optional	Registrant organization	60
<b>RegistrantFirstName</b>	Required if <b>UseCreditCard =yes</b>	Registrant first name	60
<b>RegistrantLastName</b>	Required if <b>UseCreditCard =yes</b>	Registrant last name	60
<b>RegistrantJobTitle</b>	Required if <b>RegistrantOrganizationName</b> is used	Registrant job title	60
<b>RegistrantAddress1</b>	Required if <b>UseCreditCard =yes</b>	Registrant Address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required if <b>UseCreditCard =yes</b>	Registrant city	60
<b>RegistrantStateProvince</b>	Required if <b>UseCreditCard =yes</b>	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>RegistrantPostalCode</b>	Required if <b>UseCreditCard =yes</b>	Registrant postal code	16
<b>RegistrantCountry</b>	Required if <b>UseCreditCard =yes</b>	Registrant country	60
<b>RegistrantPhone</b>	Required if <b>UseCreditCard =yes</b>	Registrant phone. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFax</b>	Required if <b>RegistrantOrganizationName</b> is used	Registrant fax numbe. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	Required if <b>UseCreditCard =yes</b>	Registrant email address	128
<i>ExtendedAttributes</i>	Required for some country codes	Data required by the Registry for some country codes. Use <a href="#">GetExtAttributes</a> to determine whether this TLD requires extended attributes.	varies
<b>CardType</b>	Required if <b>UseCreditCard =yes</b>	Type of credit card	20

Param name	Obligation	Definition	Max size
<b>CCName</b>	Required if <b>UseCreditCard=yes</b>	Cardholder's name	60
<b>CreditCardNumber</b>	Required if <b>UseCreditCard=yes</b>	Customer's credit card number	128
<b>CreditCardExpMonth</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration month	2
<b>CreditCardExpYear</b>	Required if <b>UseCreditCard=yes</b>	Credit card expiration year	4
<b>CVV2</b>	Required if <b>UseCreditCard=yes</b>	Credit card verification code	4
<b>CCAddress</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing address	60
<b>CCZip</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing postal code	15
<b>CCCountry</b>	Required if <b>UseCreditCard=yes</b>	Credit card billing country	60
<b>Renewname</b>	Optional	Set = <b>1</b> to auto-renew the name	1
<b>DomainPassword</b>	Optional	Set a password on the domain name	60
<b>EmailNotify</b>	Optional	Set = <b>1</b> to receive email notification for orders, set = <b>0</b> or omit this parameter otherwise.	1

## Returned parameters and values

Param name	Definition
<b>OrderID</b>	Order number if successful.
<b>RRPCode</b>	Success code. Only a <b>200</b> indicates success.
<b>RRPText</b>	Text which accompanies and describes the <b>RRPCode</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

- Additional params for contact information can be passed by replacing **Registrant** in the param names above with **Tech**, **Admin** or **AuxBilling**.
- If using our credit card option ALL registrant and credit card information is required.

## Example

The following query orders and pays for one year of DNS hosting for the site **resellerdocs.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=purchasehosting&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&numyears=1&
RegistrantAddress1=111+Main+St.+&RegistrantCity=Hometown&RegistrantCountry=USA&
RegistrantEmailAddress=test@here.net&RegistrantFirstName=John&RegistrantLastName=Doe&
RegistrantPhone=+1.5555555555&RegistrantPostalCode=99999&Renewname=1&
UseCreditCard=yes&EndUserIP=127.0.0.1&CreditCardNumber=4111111111111111&
CreditCardExpMonth=05&CreditCardExpYear=2005&CCName=John+Doe&CardType=visa&
ChargeAmount=12&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <OrderID>156062635</OrderID>
  <Command>PURCHASEHOSTING</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PurchasePOPBundle

## Description

### Definition

Purchase, in real time, a pak of 10 POP email accounts for the specified domain name.

### Usage

Use this command to purchase, in real time, a pak of 10 POP email accounts for the specified domain name.

We recommend the POP3 mail service for parties who want to be able to send mail from their domain name (instead of, for example, a yahoo or hotmail sender's address), and for parties who want to manage multiple email accounts as a body (rather than having everyone's email forwarded to scattered locations).

Generally, you purchase a POP bundle, then set up users (see [SetUpPOP3User](#)).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/POPConfig.asp?DomainNameID=152533676>

On the **POP3 Mail** page, the **add an Email Pak** button calls the **PurchasePOPBundle** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- The domain name must belong to this account.
- This command can be used only for purchasing POP paks for reseller accounts. Retail accounts must use a queue-based shopping cart process.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>Quantity</b>	Required	Number of 10-address paks.	10

Param name	Obligation	Definition	Max size
<b>UseCreditCard</b>	Optional for resellers who use our credit card processing AND want to charge this transaction to the credit card included in this query string	Permitted values are <b>yes</b> and <b>no</b> . The credit card supplied in this query string is charged only if <b>UseCreditCard=yes</b> . If this param is omitted or if <b>UseCreditCard=no</b> , the account balance rather than the credit card is debited for this transaction. This is true even if the query string includes all the Registrant contact and credit card information.	3
<b>EndUserIP</b>	<b>Required</b> for our credit card processing	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantFirstName</b>	<b>Required</b> for our CC processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> for our CC processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> for our CC processing	First line of Registrant address	60
<b>RegistrantAddress2</b>	Optional for our CC processing	Second line of Registrant address	60
<b>RegistrantCity</b>	<b>Required</b> for our CC processing	Registrant city	60
<b>RegistrantCountry</b>	<b>Required</b> for our CC processing	Registrant country. Two-letter country code is a permitted format.	60
<b>RegistrantPostalCode</b>	<b>Required</b> for our CC processing	Registrant postal code	16
<b>RegistrantPhone</b>	<b>Required</b> for our CC processing	Registrant phone. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	<b>Required</b> for our CC processing	Registrant email address	128
<b>CardType</b>	<b>Required</b> for our CC processing	Credit card type. Permitted values are <b>Visa, Mastercard, AmEx, Discover</b>	20
<b>CCName</b>	<b>Required</b> for our CC processing	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> for our CC processing	Credit card number	128

Param name	Obligation	Definition	Max size
<b>CreditCardExpMonth</b>	<b>Required</b> for our CC processing	Expiration month of the credit card, in format <i>MM</i>	2
<b>CreditCardExpYear</b>	<b>Required</b> for our CC processing	Expiration year of the credit card, in format <i>YYYY</i>	4
<b>CVV2</b>	<b>Required</b> for our CC processing	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> for our CC processing	Credit card billing address	60
<b>ChargeAmount</b>	<b>Required</b> for our CC processing	Amount to charge this credit card. Required format is <i>DD.cc</i>	6
<b>ResponseType</b>	Optional in all cases	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>OrderID</b>	Identification number of the order
<b>BundleID</b>	Identification number of each POP3 10-pak
<b>BundleCount</b>	Number of POP 10-paks sold in this transaction, if more than 1
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests **1** bundle of 10 POP3 mailboxes for **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PurchasePOPBundle&uid=resellid&pw=resellpw&sld=resellerdocs.com&tld=com&Quantity=1&responsetype=xml
```

In the response, the return of an **orderid** value and a **bundleid** value confirm a successful query:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
```

```
<orderid>156133590</orderid>
<bundleid>5134</bundleid>
<Command>PURCHASEPOPBUNDLE</Command>
<ErrCount>0</ErrCount>
<Server>ResellerTest</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

---

# PurchasePreview

---

## Description

### Definition

Preview a shopping cart order.

### Usage

Use this command to view the items that will be purchased if you check out now.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/Cart.asp>

On the **cart** page, the **checkout** button calls the **PurchasePreview** command. It creates the list of items on the **checkout** page.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

## Returned parameters and values

Param name	Definition
<b>ItemID</b>	Shopping cart item ID, from our internal records
<b>Description</b>	Description of shopping cart item
<b>Years</b>	Number of time units customer wants to subscribe
<b>NameID</b>	Domain name ID, from our internal records
<b>Name</b>	Name the customer has requested for this item
<b>StatusID</b>	Status ID
<b>ItemPrice</b>	Price for one unit of this item

Param name	Definition
<b>ExtPrice</b>	<i>ItemPrice</i> multiplied by <i>Years</i> (number of time units)
<b>NeedsConfig</b>	Flag that marks domains requiring pre-configuration
<b>ProductType</b>	Product type ID number, from our internal records
<b>FreeTrial</b>	Is this product being offered as a free trial?
<b>ParentItemID</b>	Parent item ID number, from our internal records
<b>ICANNFees</b>	Fees charged by ICANN for this product
<b>BasePrice</b>	Price of this product before the ICANN fee
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following requests a preview of account **resellid** and an inventory of its shopping cart, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=purchasepreview&
uid=resellid&pw=resellpw&responsetype=xml
```

The response gives some general information about the account, plus the current contents of the shopping cart:

```
<?xml version="1.0" ?>
<interface-response>
  <Purchase-Summary>
    <Reseller>True</Reseller>
    <Balance>3627.65</Balance>
    <AvailableBalance>3587.85</AvailableBalance>
    <DomainCount>1</DomainCount>
    <DotComPrice>8.95</DotComPrice>
    <DotNetPrice>8.95</DotNetPrice>
    <DotOrgPrice>8.95</DotOrgPrice>
    <DotCcPrice>24.95</DotCcPrice>
    <DotTvPrice>39.95</DotTvPrice>
  <CartItem>
    <ItemID>365635</ItemID>
    <Description>Register</Description>
    <Years>2</Years>
    <NameID>152534050</NameID>
    <Name>resellerdocs.com</Name>
    <StatusID>A</StatusID>
    <ItemPrice>8.95</ItemPrice>
    <ExtPrice>20.00</ExtPrice>
    <NeedsConfig />
  </CartItem>
```

```
<TotalPrice>20.00</TotalPrice>
</Purchase-Summary>
<Command>PURCHASEPREVIEW</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# PurchaseServices

---

## Description

### Definition

Purchase, in real time, ID Protect, email forwarding, or URL forwarding services for a domain name.

### Usage

Use this command to purchase value-add services in real time, as opposed to going through a shopping cart and our order queue. Most commonly, real-time commands are used by resellers who maintain their own databases.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/Checkout.asp>

The **PurchaseServices** command is not implemented on [www.enom.com](http://www.enom.com). However, on the **checkout** page, the **purchase** button calls **InsertNewOrder**, a similar command that initiates checkout. The difference is that **InsertNewOrder** acquires contents of the shopping cart and puts them in a queue for checkout; the **PurchaseServices** command bypasses the shopping cart and the queue.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	<b>Required</b> for all services	Account login ID	20
<b>PW</b>	<b>Required</b> for all services	Account password	20
<b>SLD</b>	<b>Required</b> for all services	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	<b>Required</b> for all services	Top-level domain name (extension)	15

Param name	Obligation	Definition	Max size
<b>Service</b>	<b>Required</b> for all services	Permitted values are <b>WPPS</b> (Whois Privacy Protection Service), <b>EmailForwarding</b> , and <b>URLForwarding</b>	15
<b>NumYears</b>	Optional for all services; default value is <b>1</b>	Number of years to subscribe to this service	2
<b>AddressX</b>	<b>Required</b> for email forwarding	Email alias to be forwarded. For example, if an email address associated with this domain is john.doe@example.com, the input argument would be <b>Address1=john.doe</b> For additional important information about the <b>AddressX</b> parameter in email forwarding, please read the note below.	63
<b>ForwardToX</b>	<b>Required</b> for email forwarding	Email address to forward to. For example, <b>ForwardTo1=john.doe@hotmail.com</b> For additional important information about the <b>ForwardToX</b> parameter, please read the note below.	128
<b>HostNameX</b>	<b>Required</b> for URL forwarding	Name of the host record to forward. For additional important information about the <b>HostNameX</b> parameter, please read the note below.	60
<b>RecordTypeX</b>	<b>Required</b> for URL forwarding	Record type of host record X. Permitted values are: <b>A</b> Address <b>MXE</b> Mail Easy (email forwarding) <b>MX</b> Mail. Can be a host name under this domain name or the name of a mail server <b>CNAME</b> Alias record type, to associate a host name with another host <b>URL</b> URL redirect <b>FRAME</b> Frame redirect <b>TXT</b> Text record For additional important information about the <b>RecordTypeX</b> parameter, please read the note below.	5

Param name	Obligation	Definition	Max size
<b>AddressX</b>	<b>Required</b> for URL forwarding	<p>Address to redirect to.</p> <p>If <b>RecordTypeX=A</b>, <b>AddressX</b> must be an IP address</p> <p>If <b>RecordTypeX=MXE</b>, <b>AddressX</b> must be an IP address</p> <p>If <b>RecordTypeX=MX</b>, <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain</p> <p>If <b>RecordTypeX=CNAME</b>, <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain</p> <p>If <b>RecordTypeX=URL</b>, <b>AddressX</b> must be the exact URL of the page you redirect to, or an IP address, or a fully qualified domain name (see Note)</p> <p>If <b>RecordTypeX=FRAME</b>, <b>AddressX</b> is the actual URL, or the IP address, or the fully qualified domain name (see Note) of the page you want to display when someone types <i>Your_Domain.com</i></p> <p>If <b>RecordTypeX=TXT</b>, <b>AddressX</b> is a text record. For help writing an SPF record, you can go to <a href="http://spf.pobox.com/wizard.html">http://spf.pobox.com/wizard.html</a></p> <p>For additional important information on the <b>AddressX</b> parameter in URL forwarding, please read the note below.</p>	260
<b>MXPrefX</b>	Optional for URL forwarding; use with record type <b>MX</b>	<p>Host record preference for setting mail redirection. The lower the number, the higher the priority. If not specified, default value is <b>10</b>.</p> <p>For additional important information about the <b>MXPrefX</b> parameter, please read the note below.</p>	5
<b>UseCreditCard</b>	Optional for resellers who use our credit card processing AND want to charge this transaction to the credit card included in this query string	Permitted values are <b>yes</b> and <b>no</b> . The credit card supplied in this query string is charged only if <b>UseCreditCard=yes</b> . If this param is omitted or if <b>UseCreditCard=no</b> , the account balance rather than the credit card is debited for this transaction. This is true even if the query string includes all the Registrant contact and credit card information.	3
<b>EndUserIP</b>	<b>Required</b> for our credit card processing	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantFirstName</b>	<b>Required</b> for our CC processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> for our CC processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> for our CC processing	First line of Registrant address	60
<b>RegistrantAddress2</b>	Optional for our CC processing	Second line of Registrant address	60
<b>RegistrantCity</b>	<b>Required</b> for our CC processing	Registrant city	60

Param name	Obligation	Definition	Max size
<b>RegistrantCountry</b>	<b>Required</b> for our CC processing	Registrant country. Two-letter country code is a permitted format.	60
<b>RegistrantPostalCode</b>	<b>Required</b> for our CC processing	Registrant postal code	16
<b>RegistrantPhone</b>	<b>Required</b> for our CC processing	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	<b>Required</b> for our CC processing	Registrant email address	128
<b>CardType</b>	<b>Required</b> for our CC processing	Credit card type. Permitted values are <b>Visa, Mastercard, AmEx, Discover</b>	20
<b>CCName</b>	<b>Required</b> for our CC processing	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> for our CC processing	Credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> for our CC processing	Expiration month of the credit card, in format <i>MM</i>	2
<b>CreditCardExpYear</b>	<b>Required</b> for our CC processing	Expiration year of the credit card, in format <i>YYYY</i>	4
<b>CVV2</b>	<b>Required</b> for our CC processing	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> for our CC processing	Credit card billing address	60
<b>ChargeAmount</b>	<b>Required</b> for our CC processing	Amount to charge this credit card. Required format is <i>DD.cc</i>	6
<b>ResponseType</b>	Optional in all cases	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>EmailForwardingEnabled</b>	Enabled status of email forwarding; included in return if query was for <b>Service=EmailForwarding</b>
<b>MailCount</b>	Mail count; included in return if query was for <b>Service=EmailForwarding</b>
<b>OrderID</b>	Order ID number
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- For email forwarding, the query string *must* include an **AddressX, ForwardToX** pair for every email address you want to associate with this domain name. The **PurchaseServices** command overwrites (as opposed to adding to) the email forwarding records in the database.

- For URL forwarding, the query string *must* include a **HostNameX**, **RecordTypeX**, **AddressX**, **MXPrefX** set for *every* host name you want to associate with this domain name. The **PurchaseServices** command overwrites (as opposed to adding to) the URL forwarding records in the database.
- A fully qualified domain name is expressed in the format "*hostname.SLD.TLD*". Note that the period at the end is an essential component of a fully qualified domain name.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds the email forwarding service to domain **resellerdocs.com**, sets **john.doe@resellerdocs.com** to forward to **jane.doe@resellerdocs.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=PURCHASESERVICES&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&Service=EmailForwarding&
Address1=john.doe&ForwardTo1=jane.doe@resellerdocs.com&responsetype=xml
```

In the response, the presence of an **OrderID** and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <OrderID>156179994</OrderID>
  <Command>PURCHASESERVICES</Command>
  <ErrCount>0</ErrCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>0</IsLockable>
  <IsRealTimeTLD>0</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# PushDomain

## Description

### Definition

Push a domain name into another account.

### Usage

Use this command to transfer a domain name from one eNom account to another.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/Push.asp?DomainNameID=152533676>

On the **push a domain** page, the **submit** button calls the **PushDomain** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The account to which the domain name is being pushed must be under eNom or one of its resellers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>AccountID</b>	Required	Login ID of the account to push the name into. Use <a href="#">GetSubAccounts</a> to list subaccounts.	16

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>PushDomain</b>	Returns = <b>1</b> if successful or = <b>0</b> if it fails

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the domain name **resellerdocs2.net** be pushed from account **resellid** to account **olerud**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=pushdomain&
uid=resellid&pw=resellpw&sld=resellerdocs2&tld=net&accountid=olerud&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Push>
    <domainname sld="resellerdocs2" tld="net" id="152533887">
      resellerdocs2.net
    </domainname>
    <PushDomain>1</PushDomain>
  </Push>
  <Command>PUSHDOMAIN</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# RefillAccount

---

## Description

### Definition

Add funds to your account using a credit card.

### Usage

To add funds to your account, set parameter **Debit=True** and include the credit card parameters.

To remove your credit card information from our database, set parameter **Debit=True** and omit the credit card parameters.

To retrieve your account balance without adding funds, and to retrieve the current credit card information for the account, set parameter **Debit=False**.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** using Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/RefillAccount.asp>

At the bottom of the **Credit Card** section, the **submit** button calls the **RefillAccount** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The account must be a reseller account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	<b>Required</b>	Account login ID	20
<b>PW</b>	<b>Required</b>	Account password	20
<b>Debit</b>	<b>Required</b>	Debit the credit card; options are <b>True</b> or <b>False</b> . <b>Debit=True</b> uses the credit card in this query string for this transaction, and replaces the credit card information for the account record with the values in this query string. <b>Debit=False</b> retrieves your account balance without changing it, and without charging your credit card; it also retrieves the current credit card information for the account.	1
<b>EndUserIP</b>	<b>Required</b> if you want to add funds to your account	IP address of the user whose credit card information is provided in this query string. Use <i>NNN.NNN.NNN.NNN</i> format	15
<b>CCAmount</b>	<b>Required</b> if you want to add funds to your account	Amount to charge to credit card, in <i>DD.cc</i> format. We charge a 3% convenience fee which is deducted immediately from the <b>CCAmount</b> .	Min \$100
<b>CCType</b>	<b>Required</b> if you want to add funds to your account	Credit card type. Options are <b>AmEx</b> , <b>Discover</b> , <b>MasterCard</b> , <b>Visa</b> .	10
<b>CCName</b>	<b>Required</b> if you want to add funds to your account	Credit card holder's name as imprinted on the credit card	60
<b>CCNumber</b>	<b>Required</b> if you want to add funds to your account	16-digit credit card number	16
<b>CCMonth</b>	<b>Required</b> if you want to add funds to your account	Month in which credit card expires, in <i>MM</i> format	2
<b>CCYear</b>	<b>Required</b> if you want to add funds to your account	Year in which credit card expires, in <i>YYYY</i> format	4
<b>CVV2</b>	<b>Required</b> if you want to add funds to your account	Credit card security verification code, 3- or 4-digit number from the back of the credit card	4
<b>CCAddress</b>	<b>Required</b> if you want to add funds to your account	Street address as shown on credit card bill	60
<b>CCCity</b>	Optional	City as shown on credit card bill	60
<b>CCStateProvince</b>	<b>Required</b> if you want to add funds to your account	State or province as shown on credit card bill	60
<b>CCZip</b>	<b>Required</b> if you want to add funds to your account	Zip code or postal code as shown on credit card bill	16
<b>CCCountry</b>	<b>Required</b> if you want to add funds to your account	Country of credit card billing address, expressed as 2-character country code	2

Param name	Obligation	Definition	Max size
<b>CCPhone</b>	<b>Required</b> if you want to add funds to your account	Phone number as shown on credit card bill. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>SendMail</b>	Optional	Send email confirmation to the billing contact for this account. <b>0</b> or <b>No</b> turns off the email; any other value or omitting this parameter sends the email.	2
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Reseller</b>	<b>1</b> indicates that this is a reseller account
<b>CCTRANSRESULT</b>	Result of the credit card transaction
<b>ResellerRefill</b>	Success status of the account refill
<b>CreditCardStatus</b>	Success status of the credit card transaction
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds **\$100.00** to the account balance for **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=REFILLACCOUNT&
uid=resellid&pw=resellpw&CCAmount=100&CCType=MasterCard&
CCName=JohnDoe&CCNumber=5215521552155215&CCMonth=02&CCYear=2004&
cvv2=200&ccaddress=100+Main+St.&CCStateProvince=WA&cczip=99999&
debit=true&CCCcountry=us&CCPhone=+1.5555559999&ResponseType=xml
```

In the response, the values for **CCTRANSRESULT**, **ResellerRefill**, **CreditCardStatus**, and **ErrCount** confirm that the refill was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <CurrentDate>Wednesday, August 20, 2003</CurrentDate>
  <RefillAccount>
    <FName>John</FName>
```

```

<LName>Doe</LName>
<Reseller>1</Reseller>
<CCTransResult>APPROVED</CCTransResult>
<ResellerRefill>Transactions processed successfully.</ResellerRefill>
<CreditCardStatus>Successful</CreditCardStatus>
<CCYear>2004</CCYear>
<CCMonth>2</CCMonth>
<CCNumber>*****5215</CCNumber>
<CCName>JohnDoe</CCName>
<PaymentType>MasterCard</PaymentType>
<CCAddress>100 Main St.</CCAddress>
<CCCity>Hometown</CCCity>
<CCStateProvince>WA</CCStateProvince>
<CCCountry>us</CCCountry>
<CCPhoneDial />
<CCPhone>5555559999</CCPhone>
<CCZip>99999</CCZip>
</RefillAccount>
<Command>REFILLACCOUNT</Command>
<ErrCount>0</ErrCount>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>0</IsLockable>
<IsRealTimeTLD>0</IsRealTimeTLD>
<Done>true</Done>

---

# RegisterNameServer

---

## Description

### Definition

Register a domain name server.

### Usage

Use this command to register one of your own servers as a domain name server.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/RegNameServer.asp>

On the **register a name server** page, the **submit** button calls the **RegisterNameServer** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The server you register must use a domain name that is in your account.
- eNom must be licensed with the Registry in which you want to register a name server; you can only register name servers for TLDs that we support.
- The registrar lock for the domain must be set to off while you register a name server. You can switch the registrar lock back on (and we recommend that you do so) once the name server is registered.
- Name servers for .us names must be located in the United States.
- .co.uk and .org.uk names must have at least two name servers.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Add</b>	Required	Authority to add a name server. Set <b>Add=true</b> to authorize.	5
<b>NsName</b>	Required	Name server to register. Use format <i>dns1.NameServerName.com</i>	60
<b>IP</b>	Required	IP of the name server.	15

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the computer with IP address **127.0.0.1**, known as **ns1.name-services.com**, be registered as a name server. The query requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=registernameserver&
uid=resellid&pw=resellpw&add=true&nsname=dns1.resellerdocs.com&
ip=127.0.0.1&responsetype=xml
```

In the response, the RRP code of **200** and **success** message in the RRP text indicate a successful registration:

```
<?xml version="1.0" ?>
<interface-response>
  <RegisterNameserver>
    <NS>dns1.resellerdocs.com</NS>
    <IP>127.0.0.1</IP>
    <reg-lock>1</reg-lock>
    <RegistrarLock>ACTIVE</RegistrarLock>
    <NsSuccess>1</NsSuccess>
    <RegistrarLock>REGISTRAR-LOCK</RegistrarLock>
  </RegisterNameserver>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>REGISTERNAMESERVER</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# RemoveTLD

---

## Description

### Definition

Remove TLDs from your list of authorized TLDs that you offer to your resellers and retail customers. Or, revert to our default list, which includes all TLDs that we support.

### Usage

Use this command to remove TLDs from your list of authorized TLDs that you offer to your resellers and retail customers. This command controls authorization for registrations, renewals, and transfers.

This command does not function unless you have previously used the [AuthorizeTLD](#) command to authorize TLDs. It will not remove TLDs if your account is using our default list.

If you remove all TLDs from your list of authorized TLDs, your account will revert to our default list. Our default list includes all TLDs that we offer.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/RenewalPricing.asp?tab=1>

If you remove TLDs from your authorized list, refreshing this page will reflect the change.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- You can only remove TLDs that you added using the **AuthorizeTLD** command.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20

Param name	Obligation	Definition	Max size
<b>TLD</b>	Either <b>TLD</b> or <b>DomainList</b> is <b>Required</b>	One top-level domain (TLD) to remove from your list of authorized TLDs. For example, if you want to remove .biz, use <b>TLD=biz</b> .	15
<b>DomainList</b>	Either <b>TLD</b> or <b>DomainList</b> is <b>Required</b>	Comma-separated list of TLDs to remove from your list of authorized TLDs. For example, if you want to remove .com, .net, and .org, use <b>DomainList=com,net,org</b> .	100
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DeleteTLDX</b>	List of TLDs to remove from the list of TLDs authorized for this account. The response is indexed X if <b>ResponseType=text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query removes TLDs **.us** and **.ca** from **resellid**'s list of authorized TLDs, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=removetld&
uid=resellid&pw=resellpw&domainlist=us,ca&responsetype=xml
```

In the response, the list of TLDs and the **ErrCount** value of **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <tldlist>
    <deletetld>us</deletetld>
    <deletetld>ca</deletetld>
  </tldlist>
  <Command>REMOVETLD</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
```

```
<Site>enom</Site>
<IsLockable />
<IsRealTimeTLD />
<ExecTime>1.191406</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# RenewPOPBundle

---

## Description

### Definition

Renew the annual subscription on a POP mail 10-pak in real time.

### Usage

Use this command to renew, in real time, the annual subscription on a POP mail 10-pak.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/POPConfig.asp?DomainNameID=152533676>

The **add years** button behaves similarly to the **RenewPOPBundle** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- This command is available for reseller accounts only. Retail accounts must use the queue-based shopping cart process to renew POP bundles.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID. Must be a reseller account.	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>PakID</b>	Required	ID number of this POP pak. You can retrieve the ID numbers of all POP paks in the account with the <a href="#">GetPOPExpirations</a> command.	10
<b>Quantity</b>	Required	Number of years to renew this POP pak subscription	2

Param name	Obligation	Definition	Max size
<b>UseCreditCard</b>	Optional for resellers who use our credit card processing AND want to charge this transaction to the credit card included in this query string	Permitted values are <b>yes</b> and <b>no</b> . The credit card supplied in this query string is charged only if <b>UseCreditCard=yes</b> . If this param is omitted or if <b>UseCreditCard=no</b> , the account balance rather than the credit card is debited for this transaction. This is true even if the query string includes all the Registrant contact and credit card information.	3
<b>EndUserIP</b>	<b>Required</b> for our credit card processing	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantFirstName</b>	<b>Required</b> for our CC processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> for our CC processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> for our CC processing	First line of Registrant address	60
<b>RegistrantAddress2</b>	Optional for our CC processing	Second line of Registrant address	60
<b>RegistrantCity</b>	<b>Required</b> for our CC processing	Registrant city	60
<b>RegistrantCountry</b>	<b>Required</b> for our CC processing	Registrant country. Two-letter country code is a permitted format.	60
<b>RegistrantPostalCode</b>	<b>Required</b> for our CC processing	Registrant postal code	16
<b>RegistrantPhone</b>	<b>Required</b> for our CC processing	Registrant phone. Required format is <i>+CountryCode.PhoneNumber</i> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	<b>Required</b> for our CC processing	Registrant email address	128
<b>CardType</b>	<b>Required</b> for our CC processing	Credit card type. Permitted values are <b>Visa, Mastercard, AmEx, Discover</b>	20
<b>CCName</b>	<b>Required</b> for our CC processing	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> for our CC processing	Credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> for our CC processing	Expiration month of the credit card, in format <i>MM</i>	2

Param name	Obligation	Definition	Max size
<b>CreditCardExpYear</b>	<b>Required</b> for our CC processing	Expiration year of the credit card, in format YYYY	4
<b>CVV2</b>	<b>Required</b> for our CC processing	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> for our CC processing	Credit card billing address	60
<b>ChargeAmount</b>	<b>Required</b> for our CC processing	Amount to charge this credit card. Required format is <i>DD.cc</i>	6
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>OrderID</b>	Order ID for a successful renewal
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query renews POP pak **5105** for **1** year and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=renewpopbundle&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
pakid=5105&quantity=1&responsetype=xml
```

In the response, an **OrderID** value and an **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <orderid>156227365</orderid>
  <Command>RENEWPOPBUNDLE</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
```

```
<MinPeriod>1</MinPeriod>
<MaxPeriod>10</MaxPeriod>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>True</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<ExecTime>0.34375</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# RPT\_GetReport

## Description

### Definition

Retrieve an itemized list of one type of activity in a domain name account.

### Usage

Use this command to retrieve a list of one of the following types of account activity in a domain name account: registrations, renewals, transfers, private label, subaccounts, accounting, or expiring names.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/newReports.asp>

When you choose one of the seven report types listed above under Usage, the **view report** button calls the **RPT\_GetReport** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The beginning date for reports must be no earlier than 6 months before today.
- The **ResponseType** must be **XML**. You can parse the XML response after receiving it.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ReportType</b>	Required	Type of report to generate. Permitted values are: <b>0</b> Registrations <b>1</b> Renewals <b>2</b> Transfers <b>3</b> Private label (PDQ and Registry Rocket) <b>4</b> Subaccounts <b>5</b> Accounting <b>6</b> Expiring names	1

Param name	Obligation	Definition	Max size
<b>BeginDate</b>	Optional; default is the last day of the month, two months before the current month	First date to include in the report. Must be no earlier than six months before today. Use format <i>MM/DD/YYYY</i>	10
<b>EndDate</b>	Optional; default is today's date	Last date to include in the report. Use format <i>MM/DD/YYYY</i>	10
<b>ResponseType</b>	<b>Required</b>	Format of response. Permitted value is <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>SixMoPast</b>	The date six months before today
<b>BeginDate</b>	The first date included in this report
<b>EndDate</b>	The last date included in this report
<b>Option</b>	Report types available using this command
<b>ReportType</b>	Report type specified in this query string
<b>ReportName</b>	Name of the report type specified in this query string
<b>Results</b>	Itemized list of results; varies according to the report type
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests a list of registrations for the period 1/1/2004 to 4/1/2004, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=RPT_GETREPORT&
uid=resellid&pw=resellpw&ReportType=0&
BeginDate=01/01/2005&EndDate=04/01/2005&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <rpt>
```

```

<sixmopast>10/1/2004</sixmopast>
<begindate>1/1/2005</begindate>

# ServiceSelect

---

## Description

### Definition

Enable and disable services for a domain.

### Usage

Use this command to enable or disable email (MX or MXE), DNS, ID Protect, Traffic Vista, NameMyPhone, NameMyComputer, NameMyMap, or parking services for a domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

[https://resellertest.enom.com/domains/](https://resellertest.enom.com/domains/ServiceSelection.asp?DomainNameID=152533676&service=emailset)

[ServiceSelection.asp?DomainNameID=152533676&service=emailset](https://resellertest.enom.com/domains/ServiceSelection.asp?DomainNameID=152533676&service=emailset)

On the **email settings**, **name my phone**, **name my computer**, or **name my map** pages, the **save changes** button calls the **ServiceSelect** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- One query can select only one service. You must repeat the query for each service you want to select.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

Param name	Obligation	Definition	Max size
<b>Service</b>	Required	Service type. Permitted values are: <b>DNSServer</b> (which domain name servers to use) <b>DNSSettings</b> (host records) <b>WSB</b> (Web Site Builder and Web hosting services) <b>EmailSet</b> (email services) <b>WPPS</b> (ID Protect Whois Privacy Protection) <b>TrafficVista</b> (traffic monitoring) <b>Parking</b> (parking text) <b>Messaging</b> (NameMyPhone) <b>Map</b> (NameMyMap)	15
<b>NewOptionID</b>	Required	Setting for the service. Permitted values are: <b>Service=DNSServer</b> (which domain name servers): <b>1006</b> use our name servers <b>1012</b> use user-specified domain servers, including none <b>Service=DNSSettings</b> (host records) If <b>Service=DNSServer</b> and <b>NewOptionID=1006</b> , then also include in query string: <b>Service=DNSSettings</b> and <b>NewOptionID=1021</b> <b>Service=WSB</b> (Web site services): <b>1060</b> no Web site building or hosting services <b>1063</b> Web Site Builder <b>1066</b> Web site hosting accounts <b>Service=EmailSet</b> (Email services): <b>1048</b> no email <b>1051</b> email forwarding (to a POP or WebMail address) <b>1054</b> user (mail server name required) <b>1105</b> user simplified (mail server's IP address required) <b>1114</b> POP3/WebMail plus email forwarding <b>Service=WPPS</b> (ID Protect Whois Privacy Protection): <b>1120</b> WhoIs information is masked <b>1123</b> WhoIs information is viewable <b>Service=TrafficVista</b> (traffic monitoring) <b>1151</b> enabled <b>1153</b> disabled <b>Service=Parking</b> (parking text): <b>1030</b> disabled <b>1033</b> enabled <b>Service=Messaging</b> (NameMyPhone): <b>1087</b> disabled <b>1090</b> enabled <b>Service=Map</b> (NameMyMap): <b>1108</b> disabled <b>1111</b> enabled	4
<b>Update</b>	Optional	<b>True</b> changes NewOptionID to disabled code only.	5
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>current-svc</b>	Current service option setting
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query enables email services, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=serviceselect&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&newoptionid=1114&
service=messaging&update=True&responsetype=xml
```

The response indicates that email services have changed from option **1048** (no email) to **1114** (POP3/WebMail plus email forwarding):

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <ServiceSelect>
    <domainname sld="resellerdocs" tld="com" domainnameid="152533676">
      resellerdocs.com
    </domainname>
    <service name="email">
      <UpdateOption>True</UpdateOption>
      <option name="1048" />
      <option name="1114" />
    </service>
    <current-svc>1114</current-svc>
    <WebSite />
  </ServiceSelect>
  <Command>SERVICESELECT</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# SetCustomerDefinedData

---

## Description

### Definition

Enter data fields defined by you, and the corresponding data.

### Usage

Use this command to create a storage place for data fields that do not currently exist.

Also use this command to put data into those custom data fields. This command allows you to add data one field at a time.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ObjectID</b>	Required	Object ID number, an integer assigned by you.	2
<b>Type</b>	Required	Object type. Options are: <b>1</b> Data pertaining to an account <b>2</b> Data pertaining to a domain <b>3</b> Data pertaining to an order	1
<b>SLD</b>	Required if <b>Type=2</b>	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required if <b>Type=2</b>	Top-level domain name (extension)	15
<b>OrderID</b>	Required if <b>Type=3</b>	Order ID, which you can retrieve using <a href="#">GetDomainStatus</a> .	11
<b>Key</b>	Required	Title of this entry, or label describing this data field	50

Param name	Obligation	Definition	Max size
<b>Value</b>	<b>Required</b>	Content of this entry	50
<b>DisplayFlag</b>	<b>Recommended</b>	Visibility to subaccount. Options are: <b>0</b> Not visible when logged on with subaccount ID <b>1</b> Visible when logged on using subaccount ID	1
<b>EnteredBy</b>	<b>Recommended</b>	Name of the person adding this entry	50
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query creates a new data field labeled **FavoriteCuisine** and assigns a value **Italian** for this account.:

```
http://resellertest.enom.com/interface.asp?command=SetCustomerDefinedData&
uid=resellid&pw=resellpw&ObjectID=1&Type=1&Key=FavoriteCuisine&Value=Italian&
DisplayFlag=0&EnteredBy=John&responsetype=xml
```

In the response, the value **0** for **ErrCount** confirms that the query executed successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>SETCUSTOMERDEFINEDDATA</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

## Related commands

---

# SetDNSHost

---

## Description

### Definition

Dynamically updates the IP address of the host computer in our name server records.

### Usage

Use this command to update the IP address of a host that does not have a static IP address.

If possible, use this command in a secure mode: https instead of http.

### Availability

All customers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain name must have a password.
- The host must be set as an IP address.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>Zone</b>	Required	The host and domain name that you want to update in the DNS. For example, <b>www.resellerdocs.com</b> .	93
<b>DomainPassword</b>	Required	Password for managing the domain (a domain that uses the <b>SetDNSHost</b> command must have a password)	60
<b>Address</b>	Optional	The IP address to set the DNS record to. If omitted, the IP you are coming from (as the server sees it) is used. For example, if you are connecting to the server through a proxy, the proxy server's IP will be used.	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query uses a secure server to set the host for **resellerdocs.com**. Because the query string does not specify the IP, the command sets the IP to that from which the server received the query:

```
https://resellertest.enom.com/interface.asp?command=SetDNSHost&
zone=resellerdocs.com&DomainPassword=tester&responsetype=xml
```

The error count value **0** confirms that the DNS host was set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETDNSHOST</Command>
  <ErrCount>0</ErrCount>
  <Server>Reseller5</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SetDomainMap

---

## Description

### Definition

Update NameMyMap settings.

### Usage

Use this command to update the location information listed on map.*YourSite.com*.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/NameMyMap.asp?DomainNameID=152533676>

On the **Map Settings** page, the **save changes** button calls the **SetDomainMap** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>HostName</b>	Required	Name for your host	60
<b>Address</b>	Required	Address to build the map for	60
<b>City</b>	Required	City to build the map for	60
<b>StateProvince</b>	Required	State or province to build the map for	60
<b>PostalCode</b>	Required	Postal code to build the map for	60
<b>Country</b>	Required	Country to build the map for	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>host-name</b>	Name for your host.
<b>address</b>	Address to build the map.
<b>city</b>	City to build the map.
<b>stateprovince</b>	State or province to build the map.
<b>postalcode</b>	Postal code to build the map.
<b>country</b>	Country to build the map.
<b>SetDomainMap</b>	Response is <b>Successful</b> or <b>Failed</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query assigns an address to the NameMyMap feature of **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setdomainmap&uid=resellid&pw=resellpw&
sld=resellerdocs&tld=com&hostname=dns1.name-services.com&Address=100%20Main%20St.&
City=Townsville&StateProvince=WA&PostalCode=99999&Country=United+States&responsetype=xml
```

The response confirms that **map.resellerdocs.com** was set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <SetDomainMap>
    <domainname sld="resellerdocs" tld="com" id="152533676">
      resellerdocs.com
    </domainname>
    <map>
      <orig-host-name>
        <![CDATA[ ]]>
      </orig-host-name>
      <host-name>
        <![CDATA[ dns1.name-services.com ]]>
      </host-name>
      <address>
        <![CDATA[ 100 Main St. ]]>
      </address>
      <city>
        <![CDATA[ Townsville ]]>
      </city>
    </map>
  </SetDomainMap>
</interface-response>
```

```
</city>
<stateprovince>
  <![CDATA[ WA  ]]>
</stateprovince>
<postalcode>
  <![CDATA[ 99999  ]]>
</postalcode>
<country>
  <![CDATA[ US  ]]>
</country>
<data-errors />
</map>
<SetDomainMap>Successful</SetDomainMap>
</SetDomainMap>
<Command>SETDOMAINMAP</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>eNom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

## Related commands

# SetDomainPhone

---

## Description

### Definition

Update NameMyPhone settings.

### Usage

Use this command to set the telephone forwarding information for **phone.YourSite.com**

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/PhoneMessaging.asp?DomainNameID=152533676>

On the **name my phone** page, the **save changes** button calls the **SetDomainPhone** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>HostName</b>	Required	Name for your host (default is <b>phone</b> ).	50
<b>Phone</b>	Required	Phone number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>ServiceID</b>	Required	ID of service (see notes).	3
<b>EmailAlias</b>	Required	Use alias. Options are <b>On</b> or <b>Off</b> .	3
<b>TemplateID</b>	Required	Template used to view your service (see notes).	2

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>host-name</b>	Host name for DNS entry (default is <b>phone</b> ).
<b>service-id</b>	ID of your phone service.
<b>max-chars</b>	Maximum number of characters allowed per message.
<b>email-alias</b>	Flag to set up email forwarding alias - <b>True</b> (1) or <b>False</b> (0).
<b>template-id</b>	Template used to view your service.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- ServiceID codes--**1**=Nextel, **2**=Sprint PCS, **4**=Verizon, **5**=AT&T Wireless, **8**=VoiceStream, **12**=Cingular, **99**=Other.
- TemplateID codes--**1**=Western, **2**=Techno, **3**=Modern, **4**=Letter Head, **5**=Hand Held, **6**=Business.

## Example

The following query assigns a phone number to the NameMyPhone feature of **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setdomainphone&uid=resellid&pw=resellpw&
sld=resellerdocs&tld=com&hostname=phone&phone=+1.5555555555&serviceid=4&emailalias=on&
templateid=3&responsetype=xml
```

The response confirms that **phone.resellerdocs.com** was set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <SetDomainPhone>
    <domainname sld="resellerdocs" tld="com" id="152533676">
      resellerdocs.com
    </domainname>
    <DomainPhone>
      <host-name>phone</host-name>
      <phone-number>
        <![CDATA[ 5555555555 ]]>
      </phone-number>
      <service-id>4</service-id>
      <device-email>
        <![CDATA[ ]]>
      </device-email>
      <max-chars>0</max-chars>
      <email-alias>True</email-alias>
    </DomainPhone>
  </SetDomainPhone>
</interface-response>
```

```

    <template-id>3</template-id>
    <cc-email1>
      <![CDATA[  ]]>
    </cc-email1>
    <cc-email2>
      <![CDATA[  ]]>
    </cc-email2>
    <cc-email3>
      <![CDATA[  ]]>
    </cc-email3>
    <orig-host-name />
    <data-errors />
  </DomainPhone>
  <SetDomainPhoneStatus>Successful</SetDomainPhoneStatus>
</SetDomainPhone>
<Command>SETDOMAINPHONE</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>eNom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>

```

# SetDomainSubServices

---

## Description

### Definition

Update settings for domain services (active or inactive for email forwarding host records)

### Usage

Use this command to enable or disable services. (e.g., Host or email forwarding records)

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Not implemented yet.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

`http://resellertest.enom.com/interface.asp?command=SetDomainSubServices&uid=yourloginid  
&pw=yourpassword&sld=domain&tld=com&ActivateForwarding=0&ActivateHostRecords=1`

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ActivateForwarding</b>	Optional	Set = <b>1</b> to enable, = <b>0</b> to disable (enabled by default)	1
<b>ActivateHostRecords</b>	Optional	Set = <b>1</b> to enable, = <b>0</b> to disable (enabled by default)	1
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>EmailForwarding</b>	<b>1</b> , <b>0</b> or empty

Param name	Definition
<b>HostRecords</b>	<b>1, 0</b> or empty
<b>SetDomainServices</b>	<b>Successful</b> or <b>Failed</b>
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets the subservices of a domain and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setdomainsubservices&
uid=resellid&pw=resellpw&sld=resellerdocs2&tld=net&
ActivateForwarding=1&ActivateHostRecords=1&responsetype=xml
```

In the response, the **SetDomainServices** value **Successful** and the **ErrCount** value of **0** confirm that services have been set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <DomainServices>
    <EmailForwarding>1</EmailForwarding>
    <HostRecords>1</HostRecords>
    <SetDomainServices>Successful</SetDomainServices>
  </DomainServices>
  <Command>SETDOMAINSUBSERVICES</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SetDotNameForwarding

---

## Description

### Definition

Set the email forwarding address for a .name domain.

### Usage

Use this command if you want to use the .name Registry's email forwarding feature (you can also use eNom's email forwarding with .name domains).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

On the **domain names** menu, click **my domains**, and then click a .name domain.

On the **domain control panel** of the .name domain, scroll down to **Email Settings**.

Click the **.name email** button.

On the **Manage this domain's ".NAME email forward" settings** page, the **save changes** button calls the **SetDotNameForwarding** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain must have a .name TLD.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ForwardTo</b>	Required	Email address to forward to, in the format <i>EMailAlias@DomainName.tld</i>	128
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ForwardTo</b>	Email address to which email will be forwarded
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

John Doe registers domain john.doe.name, which automatically includes the email address john@doe.name. The following query forwards email addressed to john@doe.name to **john.doe@resellerdocs.com**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setdotnameforwarding&
uid=resellid&pw=resellpw&sld=john.doe&tld=name&ForwardTo=john.doe@resellerdocs.com&respon-
setype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <dotnameforwarding>
    <ForwardTo>john.doe@resellerdocs.com</ForwardTo>
  </dotnameforwarding>
  <Command>SETDOTNAMEFORWARDING</Command>
  <ErrCount>0</ErrCount>
  <Server>Reseller3</Server>
  <Site>enom</Site>
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SetHosts

---

## Description

### Definition

Set host records for a domain name.

### Usage

Use this command to change the host records for a domain name.

To enable or disable email, use the [ServiceSelect](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/HostConfig.asp?DomainNameID=152533676>

On the **host settings** page, the **save changes** button calls the **SetHosts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>HostNameX</b> X=1 to maximum 50	Required	Name of the host record to add.	60

Param name	Obligation	Definition	Max size
<b>RecordTypeX</b> X= <b>1</b> to maximum <b>50</b>	Required	Record type of host record X. Permitted values are: <b>A</b> Address <b>MXE</b> Mail Easy (email forwarding) <b>MX</b> Mail. Can be a host name under this domain name or the name of a mail server <b>CNAME</b> Alias record type, to associate a host name with another host <b>URL</b> URL redirect <b>FRAME</b> Frame redirect <b>TXT</b> Text record	5
<b>AddressX</b> X= <b>1</b> to maximum <b>50</b>	Required	Address to redirect to. If <b>RecordTypeX=A</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MXE</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MX</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=CNAME</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=URL</b> , <b>AddressX</b> must be the exact URL of the page you redirect to, or an IP address, or a fully qualified domain name (see Note) If <b>RecordTypeX=FRAME</b> , <b>AddressX</b> is the actual URL, or the IP address, or the fully qualified domain name (see Note) of the page you want to display when someone types <i>Your_Domain.com</i> If <b>RecordTypeX=TXT</b> , <b>AddressX</b> is a text record. For help writing an SPF record, you can go to <a href="http://spf.pobox.com/wizard.html">http://spf.pobox.com/wizard.html</a>	260
<b>MXPrefX</b> X= <b>1</b> to maximum <b>50</b> )	Optional; use with record type <b>MX</b>	Host record preference for setting mail redirection. The lower the number, the higher the priority. If not specified, default value is <b>10</b> .	5

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- A fully qualified domain name is expressed in the format "*hostname.SLD.TLD*". Note that the period at the end is an essential component of a fully qualified domain name.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.

- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets four host records for **resellerdocs.com**. The results:

- **resellerdocs.com** forwards mail to IP address **66.150.5.189**.
- **photos.resellerdocs.com** points to domain name **photos.msn.com**
- **yahoo.resellerdocs.com** points to IP address **204.71.200.72**
- **msn.resellerdocs.com** points to URL **http://www.msn.com**

```
http://resellertest.enom.com/interface.asp?command=sethosts&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
HostName1=@&RecordType1=A&Address1=66.150.5.189&
HostName2=photos&RecordType2=CNAME&Address2=photos.msn.com.&
HostName3=yahoo&RecordType3=URL&Address3=204.71.200.72&
HostName4=msn&RecordType4=FRAME&Address4=http://www.msn.com&
responsetype=xml
```

The error count value of **0** confirms that hosts have been set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETHOSTS</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# SetIPResolver

## Description

### Definition

Update IP Resolver settings.

### Usage

Use this command to set information for the NameMyComputer service.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/IPResolverConfig.asp?DomainNameID=152533676>

On the **name my computer** page, the **save changes** button calls the **SetIPResolver** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>IPResolverID</b>	Optional	IP resolver ID	60
<b>OrigHostName</b>	Optional	Original host name	60
<b>HostName</b>	Required	Name for your host	60
<b>ClientUserID</b>	Required	ICQ# or UserID	60
<b>ServiceID</b>	Required	City to build the map for	60
<b>OfflineURL</b>	Optional	Offline URL	78

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>ip-resolver-id</b>	Current ID if one exists.
<b>host-name</b>	Name for your host.
<b>client-user-id</b>	Current ICQ# or UserID.
<b>service-id</b>	Current service ID (" <b>1</b> ").
<b>SetIPResolver</b>	Success of this query. Response is Successful or Failed.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets information for the Name My Computer service, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SetIPResolver&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&ClientUserID=12345678&
HostName=home&ServiceID=1&responsestype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <SetIPResolver>
    <domainname sld="resellerdocs" tld="com" id="152533676">
      resellerdocs.com
    </domainname>
    <IPResolver>
      <ip-resolver-id />
      <orig-host-name />
      <host-name>home</host-name>
      <client-user-id>
        <![CDATA[ 12345678 ]]>
      </client-user-id>
      <service-id>1</service-id>
      <offline-url>
        <![CDATA[  ]]>
      </offline-url>
      <data-errors />
    </IPResolver>
    <SetIPResolver>Successful</SetIPResolver>
  </SetIPResolver>
```

```
<Command>SETIPRESOLVER</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>eNom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# SetPakRenew

## Description

### Definition

Set the auto-renew behavior for a POP email pak.

### Usage

Use this command to set auto-renew behavior for an individual POP pak. Note that if *any* pak in a domain is set to *not* auto-renew, the auto-renew setting for the entire domain switches to off.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/POPConfig.asp?DomainNameId=152533676>

At the bottom of the section for each POP pak, the **Attempt to auto-renew** check box calls the **SetPakRenew** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The POP pak bundle ID must belong to this domain.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&**  
**uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>BundleID</b>	Required	Numerical ID for the POP pak (retrieve the bundle ID using the <a href="#">GetPOP3</a> command)	4
<b>AutoPakRenew</b>	Required	Auto-renew setting to be applied to this POP pak. Permitted values are <b>1</b> (on) or <b>0</b> (off)	1
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>DomainRRP</b>	Domain type
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>PakUpdated</b>	Bundle ID of the POP pak for which the auto-renew value is being reset
<b>AutoPakRenew</b>	Auto-renew setting for the pak. Values are <b>1</b> (on) or <b>0</b> (off)
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query turns the POP pak auto-renew setting for bundle **5105** on, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SETPAKRENEW&
uid=resellid&pw=resellpw&DomainNameID=152533676&
bundleid=5105&AutoPakRenew=1&ResponseType=XML
```

In the response, the error count of **0** and absence of error messages confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <PakUpdated>5105</PakUpdated>
  <AutoPakRenew>1</AutoPakRenew>
  <Command>SETPAKRENEW</Command>
  <ErrCount>0</ErrCount>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SetParkingText

---

## Description

### Definition

Set the parking text for a domain name.

### Usage

Use this command to set the parking text for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/ParkingPageConfig.asp?DomainNameID=152533676>

On the **parking text** page, the **save changes** button calls the **SetParkingText** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>ParkText</b>	Required	Text to display on parking page.	5000

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the parking text for **resellerdocs.com** be set as “**This is my page,**” and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setparkingtext&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
parktext=This+is+my+page&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETPARKINGTEXT</Command>
  <ErrCount>0</ErrCount>
  <Server>Reseller1</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>

# SetPassword

## Description

### Definition

Set a password for a domain name.

### Usage

Use this command to set a password for access to a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/SubAccountConfig.asp?DomainNameID=152533676>

On the **domain password** page, the **save changes** button calls the **SetPassword** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The domain name password must use ASCII characters, and must be 6 to 60 characters in length.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>DomainPassword</b>	Required	Password to access and manage the domain name. Must use ASCII characters and be 6 to 60 characters in length.	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets the domain password for **resellerdocs.com** as **resellerdocspw**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setpassword&
uid=resellid&pw=resellpw&
sld=resellerdocs&tld=com&domainpassword=resellerdocspw&responsetype=xml
```

The response confirms that the password is set successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETPASSWORD</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>

# SetPOPForwarding

---

## Description

### Definition

Create, change, or delete an email forwarding address for a domain name.

### Usage

Use this command to create, update, or delete email forwarding records for a domain name.

This command can be used to configure email forwarding addresses for both our POP mail and our email forwarding services.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enom.staging.enom.com/domains/MailConfig.asp?DomainNameID=152533676>

The **save changes** button calls the **SetPOPForwarding** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>UserName</b>	Required	The user name for this mailbox (email address will be <i>UserName@Email</i> ).	50
<b>Email</b>	Required	Domain for this mailbox. Must be the same values as <b>SLD</b> and <b>TLD</b> above. Use format <i>SLD.TLD</i> (email address will be <i>UserName@Email</i> ).	78
<b>ForwardTo</b>	Required	Email address to forward to. Use format <i>ForwardingAddress@example.com</i>	139

Param name	Obligation	Definition	Max size
<b>Enable</b>	<b>Required</b>	Add this email forwarding? Permitted values are: <b>0</b> Delete this email forwarding address <b>1</b> Add or change this email forwarding address	1
<b>StatusFlags</b>	Optional	Deliver to forwarding address? Permitted values are: <i>no value</i> Deliver to original mailbox only <b>0</b> Deliver to both original mailbox and forwarding address <b>1</b> Deliver only to the forwarding address	1
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Success</b>	<b>1</b> indicates the query was successful
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query creates an email forwarding record: Email addressed to **sales@resellerdocs.com** will be forwarded to **info@resellerdocs.com**. The query string also requests a response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SETPOPFORWARDING&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
username=sales&Email=resellerdocs.com&forwardTo=info@resellerdocs.com&
Enable=1&StatusFlags=1&ResponseType=xml
```

In the response, the **Success** value **1** indicates that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <success>1</success>
  <Command>SETPOPFORWARDING</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>

# SetRegLock

---

## Description

### Definition

Set the registrar lock for a domain name.

### Usage

Set the registrar unlock value to **0** to prevent unauthorized transfer of a domain name to another registrar.

Set the registrar unlock value to **1** to allow unrestricted transfer of a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/MiscConfig.asp?DomainNameID=152533676>

On the **Domain Name Maintenance** page, the check box marked **Do not allow this name to be transferred . . .** sets the value for the **UnlockRegistrar** parameter, and the **save changes** button calls the **SetRegLock** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>UnlockRegistrar</b>	Required	Lock option to be set. Permitted values are <b>1</b> to unlock, <b>0</b> to lock).	1

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>RegistrarLock</b>	Current lock status if successful, ( <b>=Failed</b> otherwise).
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that the registrar lock be set (**unlockregistrar** set to **false**), and requests the response in **XML** format:

```
http://resellertest.enom.com/Interface.asp?command=setreglock&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&unlockregistrar=0&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <RegistrarLock>REGISTRAR-LOCK</RegistrarLock>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>SETREGLOCK</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SetRenew

## Description

### Definition

Set the auto-renew flag for a domain name.

### Usage

Use this command with **RenewFlag** set to **1** to renew the domain registration automatically. Use this command with **RenewFlag** set to **0** to require the owner to actively renew.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://resellertest.enom.com/domains/MiscConfig.asp?DomainNameID=152533676>

On the Domain Name Maintenance page, the check box marked **Renew the registration . . .** sets the value for the **RenewFlag** parameter, and the **save changes** button calls the **SetRenew** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>RenewFlag</b>	Required	Turn the auto-renew setting for the domain on or off. Options are <b>1</b> to auto-renew, <b>0</b> otherwise	1
<b>AutoPakRenew</b>	Optional	Turn the auto-renew setting for POP paks in this domain on or off. Permitted values are <b>1</b> to auto-renew, <b>0</b> otherwise. Note that if the auto-renew setting for any individual POP pak is turned off, this domain-level setting is turned off.	1

Param name	Obligation	Definition	Max size
<b>EmailForwardRenew</b>	Optional	Turn the auto-renew setting for email forwarding in this domain on or off. Permitted values are <b>1</b> to auto-renew, <b>0</b> otherwise.	1
<b>URLForwardRenew</b>	Optional	Turn the URL forwarding setting for POP paks in this domain on or off. Permitted values are <b>1</b> to auto-renew, <b>0</b> otherwise.	1
<b>WPPSRenew</b>	Optional	Turn the auto-renew setting for Whois Privacy Protection Service in this domain on or off. Permitted values are <b>1</b> to auto-renew, <b>0</b> otherwise.	1

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>RenewName</b>	Current auto-renew setting ( <b>1</b> = on, <b>0</b> = off)
<b>AutoPakRenew</b>	Current auto-renew setting for POP paks ( <b>True</b> = on, <b>False</b> = off). This return parameter only appears if the <b>AutoPakRenew</b> is an input parameter.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that **resellerdocs.com** renew automatically, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=setrenew&
uid=resellid&pw=resellpw&
sld=resellerdocs&tld=com&renewflag=1&responsetype=xml
```

The response confirms that the autorenew flag is set successfully (**RenewName=1**):

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <RenewName>1</RenewName>
  <Command>SETRENEW</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
```

```
</debug>  
</interface-response>
```

# SetResellerServicesPricing

## Description

### Definition

Set the prices you charge your reseller for services.

### Usage

Use this command to set prices you charge a subaccount for services.

This command differs from the [GetSubAccountDetails](#) command in that the **SetResellerServicesPricing** command allows you to set pricing of any combination of services, **SetResellerServicesPricing** does not require you to simultaneously convert an account to reseller status, and **SetResellerServicesPricing** does not require you to set all service prices in a single query.

To cover all the functionality of the [GetSubAccountDetails](#) command without its restrictions, use [MakeResellerAccount](#), [SetResellerTLDPricing](#), and **SetResellerServicesPricing**.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-Manage.asp?Account=107-vm-2729>

The **save changes** button calls the **SetResellerServicesPricing** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SubUID</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Login ID of the subaccount to set pricing for.	20
<b>Account</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Account ID of the subaccount to set pricing for, in <i>NNN-aa-NNNN</i> format. To retrieve the subaccount ID, use the <a href="#">GetSubAccounts</a> command.	11

Param name	Obligation	Definition	Max size
<b>DotNameBundle</b>	Optional	Price you are charging this subaccount for a name-and-email .name bundle, in <i>DD.cc</i> format	5
<b>DNSHosting</b>	Optional	Price you are charging this subaccount for one year of DNS hosting, in <i>DD.cc</i> format	5
<b>POP3</b>	Optional	Price you are charging this subaccount for a POP3 10-pak, in <i>DD.cc</i> format	5
<b>WPPS</b>	Optional	Price you are charging this subaccount for a one-year subscription to Whois Privacy Protection Service, in <i>DD.cc</i> format	5
<b>WebMonitor</b>	Optional	Price you are charging this subaccount per month for Web Monitor, our Web site down-time monitoring service, in <i>DD.cc</i> format	5
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>ServiceX</b>	Name of this service (indexed X in <b>HTML</b> and <b>text</b> response formats)
<b>PriceX</b>	Price you set for this service (indexed X in <b>HTML</b> and <b>text</b> response formats)
<b>ServicesCount</b>	Number of services listed in this response (all services, not just those for which you set prices in your query)
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets prices for services—wholesale prices that **resellid** charges subaccount **443-up-6579**—and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SETRESELLERSERVICESPRICING
uid=resellid&pw=resellpw&account=443-up-6579&pop3=19.95&
responsetype=xml
```

In the response, the list of prices that match those you set, and the **ErrCount** value **0**, indicate that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <services>
```

```
<service name="pop3" price="19.95" />
<service name="dotnamebundle" price="" />
</services>
<servicescount>2</servicescount>
<Command>SETRESELLERSERVICESPRICING</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod>1</MinPeriod>
<MaxPeriod>10</MaxPeriod>
<Server>ResellerTest</Server>
<Site>enom</Site>
<IsLockable>0</IsLockable>
<IsRealTimeTLD>0</IsRealTimeTLD>
<ExecTime>0.6875</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

[PE\\_SetPricing](#)

[SetResellerTLDPricing](#)

# SetResellerTLDPricing

## Description

### Definition

Set the prices you charge your resellers for domain names. You can use this command to set any number of prices.

### Usage

Use this command to set prices you charge your resellers for domain names.

We recommend that you use **SetResellerTLDPricing** for setting prices charged to subaccounts. The [GetSubAccountDetails](#) command also offers this functionality, but with much stricter requirements on the query string.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/SubAccount-Manage.asp?Account=107-vm-2729>

The **save changes** button calls the **SetResellerTLDPricing** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The subaccount must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SubUID</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Login ID of the subaccount to set pricing for.	20
<b>Account</b>	Either <b>SubUID</b> or <b>Account</b> is Required	Account ID number of the subaccount to set pricing for, in <i>NNN-aa-NNNN</i> format. To retrieve the subaccount ID number, use the <a href="#">GetSubAccounts</a> command.	11
<b>TLDPrice</b>	Optional	Price you are charging this subaccount for registering this TLD, in <i>DD.cc</i> format	5

Param name	Obligation	Definition	Max size
<b>TLDRenew</b>	Optional	Price you are charging this subaccount for renewing this TLD, in <i>DD.cc</i> format	5
<b>TLDTransfer</b>	Optional	Price you are charging this subaccount for transferring this TLD, in <i>DD.cc</i> format	5
<b>DotNameBundle</b>	Optional	Price you are charging this subaccount for a name-and-email .name bundle, in <i>DD.cc</i> format	5
<b>POP3</b>	Required	Price you are charging this subaccount for a POP3 10-pak, in <i>DD.cc</i> format	5
<b>WPPS</b>	Required	Price you are charging this subaccount for WhoIs Privacy Protection Service, in <i>DD.cc</i> format	5
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>price tld="TLD" id="ID" prod="Prod"</b>	When <b>ResponseType=XML</b> , this multi-part parameter name is used as the XML tag. The return value is the price of the product described by the param name.
<b>tldX</b>	TLD, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>tldIDX</b>	TLD ID number from our database, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>productIDX</b>	Product ID number from our database, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>priceX</b>	Product price, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>DotNameBundle</b>	The price of a one-year subscription to a .name name-and-email bundle
<b>NameX</b>	Name of product, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>PriceX</b>	The price for a one-year subscription to product, indexed <i>X</i> when <b>ResponseType=text</b> or <b>HTML</b>
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets prices for some TLDs and services in account **resellid**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SETRESELLERTLDPRICING&
uid=resellid&pw=resellpw&account=443-up-6579&
comprice=12.95&comrenew=12.95&comtransfer=12.95&
netprice=12.95&netrenew=12.95&nettransfer=12.95&
orgprice=8.95&orgrenew=8.95&orgtransfer=8.95&
wpps=8.50&pop3=19.95&responsetype=xml
```

In the response, the list of TLDs and services and their prices, and the **ErrCount** value **0**, confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <tlds>
    <price tld="biz" id="6" prod="10" />
    <price tld="biz" id="6" prod="16" />
    <price tld="biz" id="6" prod="19" />
    <price tld="com" id="0" prod="10">12.95</price>
    <price tld="com" id="0" prod="16">12.95</price>
    <price tld="com" id="0" prod="19">12.95</price>
    <price tld="info" id="5" prod="10" />
    <price tld="info" id="5" prod="16" />
    <price tld="info" id="5" prod="19" />
    <price tld="net" id="1" prod="10">12.95</price>
    <price tld="net" id="1" prod="16">12.95</price>
    <price tld="net" id="1" prod="19">12.95</price>
    <price tld="org" id="2" prod="10">12.95</price>
    <price tld="org" id="2" prod="16">12.95</price>
    <price tld="org" id="2" prod="19">12.95</price>
  </tlds>
  <tldcount>15</tldcount>
  <services>
    <service name="dotnamebundle" price="" />
  </services>
  <servicescount>3</servicescount>
  <Command>SETRESELLERTLDPRICING</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site />
  <IsLockable>False</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <ExecTime>1.492188</ExecTime>
  <Done>true</Done>

# SetSPFHosts

---

## Description

### Definition

Create or update Sender Policy Framework (SPF) host records for a domain name.

### Usage

Use this command to create or update SPF host records for a domain name.

The **SetSPFHosts** command creates or updates one record per query. To set more than one SPF host record per query, use the [SetHosts](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/HostConfig.asp?DomainNameID=152533676>

The **host records setup** section behaves similarly to the **SetSPFHosts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>HostID</b>	Required when updating an SPF host record	Host ID number from our database. You can retrieve this value using the <a href="#">GetSPFHosts</a> command.	10
<b>HostName</b>	Required	Host name, assigned by you	63
<b>RecordType</b>	Required	For SPF records, the required value is <b>txt</b>	5

Param name	Obligation	Definition	Max size
<b>Address</b>	<b>Required</b>	The SPF record. For help writing this record, you can go to <a href="http://spf.pobox.com/wizard.html">http://spf.pobox.com/wizard.html</a>	255
<b>MXPref</b>	Optional	Host record preference for setting the SPF record. The lower the number, the higher the priority. If not specified, default value is <b>10</b> .	5
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets SPF host records for domain **resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SETSPFHOSTS&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&HostName=test&
Address=v%3dspf1%20mx%20ptr%20a:regular%20a:hostnames%20a:po%20mx:MX%
20mx:servers%20mx:to%20ip4:63.251.174.113%20include:myISP.net%
20include:mydomain.com%20-all&RecordType=txt&mxPref=&responsetype=xml
```

In the response, the **ErrCount** value **0** confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETSPFHOSTS</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
```

```
<TimeDifference>+03.00</TimeDifference>
<ExecTime>0.2382813</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

## Related commands

[GetHosts](#)

[GetSPFHosts](#)

[SetHosts](#)

# SetUpPOP3User

## Description

### Definition

Set up a POP3 mailbox for your domain.

### Usage

Use this command when you have purchased a POP3 email pak (see [PurchasePOPBundle](#)) and want to set up mailboxes for your domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/POPConfig.asp?DomainNameID=152533676>

On the **POP3 Mail** page, below the **Add users to this Email Pak** box, the **save changes** button calls the **SetUpPOP3User** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- A POP mail pak must have been purchased for the domain and the correct **BundleID** supplied.
- There must be at least one mailbox available in the email pak (**BundleID**) referenced.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>BundleID</b>	Required	POP pak ID number to add the user to (must have already been purchased). The order confirmation for purchasing the bundle contains the Bundle ID, or you can retrieve it using the <a href="#">GetPOP3</a> command.	integer

Param name	Obligation	Definition	Max size
<b>POPUserName</b>	<b>Required</b>	The user name to set up (email address will be <i>POPUsername@sld.tld</i> ).	50
<b>POPPassword</b>	<b>Required</b>	POP3 password.	50
<b>POPFullName</b>	<b>Required</b>	User's full name, appears in Web mail.	64

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query creates mailbox **james@resellerdocs.com** and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SetupPop3user&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&BundleID=5134&POPUserName=james&
POPPassword=resellpw&POPFullName=James+Doe&responsetype=xml
```

In the response, the value **0** for parameter **ErrCount** indicates that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>SETUPPOP3USER</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

---

# StatusDomain

---

## Description

### Definition

Get information about the status of a single domain name: registrar, expiration date, and whether it is in your account.

### Usage

Use this command when you have received an **RRPCode** value of **724** when attempting to register a domain. The response for the [Purchase](#) command gives additional information explaining the 724 code.

For other aspects of domain status, use the [GetDomainStatus](#) command for the fastest response.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The query returns an error if the domain does not belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>OrderType</b>	Optional	Options are <b>Purchase</b> (default), <b>Transfer</b> or <b>Extend</b> .	10

## Returned parameters and values

Param name	Definition
<b>DomainName</b>	Name being statused
<b>Registrar</b>	Returns <b>Known</b> , <b>Unknown</b> , or <b>None</b> .

Param name	Definition
<b>InAccount</b>	Returns <b>0</b> if not in an eNom account, <b>1</b> if in your eNom account or <b>2</b> if in another eNom account.
<b>OrderID</b>	ID number of the most recent order that included this domain.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests information about domain **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=statusdomain&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainStatus>
    <DomainName>resellerdocs.com</DomainName>
    <Registrar>Known</Registrar>
    <InAccount>1</InAccount>
    <ExpDate>6/25/2012 4:20:24 PM</ExpDate>
    <OrderID>156062089</OrderID>
  </DomainStatus>
  <RRPCode>200</RRPCode>
  <RRPText>Command completed successfully</RRPText>
  <Command>STATUSDOMAIN</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# SubAccountDomains

## Description

### Definition

List the domains in a subaccount.

### Usage

Use this command to list the domains in a subaccount.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/subaccount-list.asp>

In the list of subaccounts, click any **Enter** link. Clicking the **X domain names** link produces a similar result to using the **SubAccountDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The subaccount must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>Account</b>	Required	Subaccount code, in <i>NNN-aa-NNNN</i> format. Use the <a href="#">GetSubAccounts</a> command to retrieve this code.	11
<b>Tab</b>	Required	Which category of names to return. Permitted values are: <b>iown</b> names registered here <b>ihost</b> names that use our DNS hosting <b>progress</b> names that are expiring or expired <b>watchlist</b> names you are interested in	9
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Tab</b>	Category of names returned
<b>MultiRRP</b>	Do names in this account include credentials of more than one registrar?
<b>Domain-List Type</b>	Description of the category of names returned
<b>DomainNameID</b>	Domain name ID number, from our records
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>NS-Status</b>	<b>YES</b> indicates that this domain uses our default name servers
<b>Expiration-Date</b>	Expiration date of this domain registration
<b>Auto-Renew</b>	Is this domain set to renew automatically?
<b>EndPosition</b>	Position in the overall list of the last domain returned with this query
<b>PreviousRecords</b>	Number of domains in the overall list before the first domain in this list
<b>NextRecords</b>	Number of domains in the overall list after the last domain in this list
<b>OrderBy</b>	Sorting parameter for names
<b>Result</b>	Did this query yield any names?
<b>StartPosition</b>	Position in the overall list of the first domain returned with this query
<b>DomainCount</b>	Total number of domains in this subaccount
<b>TotalDomainCount</b>	Total number of domains in this parent account
<b>StartLetter</b>	First letter of the domains returned with this query
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query returns the registered (**iown**) domain names in the subaccount, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=SUBACCOUNTDOMAINS&
uid=resellid&pw=resellpw&Account=493-yp-5836&tab=iown&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <GetDomains>
    <tab>iown</tab>
    <multirrp>False</multirrp>
    <domain-list type="Registered">
      <domain>
```

```

    <DomainNameID>152556719</DomainNameID>
    <sld>subresellerdocs</sld>
    <tld>com</tld>
    <ns-status>NA</ns-status>

# TP\_CancelOrder

---

## Description

### Definition

Cancel a transfer order that has been submitted by eNom, but not yet processed by the Registry.

### Usage

Use this command to cancel the parts of a transfer order that has been submitted by us, but not yet processed by the Registry (there is an interval of approximately 5 days between the two events).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferStatus.asp?transferorderid=445425>

On the **Transfer Order Detail** page, the **Cancel This Order** link calls the **TP\_CancelOrder** command.

<http://resellertest.enom.com/domains/TransferOrderReview.asp?TransferOrderID=445428&OrderType=Auto+Verification&RegistrantFirstName=&RegistrantLastName=>

On the **Pending orders** page, the **cancel** button calls the **TP\_CancelOrder** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order must be valid and must belong to this account.
- A transfer order can be canceled only for domains that have a TransferOrderDetail StatusID of **0**, **9**, **10**, **11**, **12**, **13**, **28**, or **29**. Use [TP\\_GetOrderDetail](#) to retrieve the statuses of each domain in the order.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderID</b>	Required	Transfer order ID number. To retrieve this value, use the <a href="#">TP_GetOrderStatuses</a> command.	10

## Returned parameters and values

Param name	Definition
<b>Success</b>	Returns <b>True</b> if transfer request was successfully cancelled
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- To be eligible for cancellation, each domain must be in one of the following statuses. Retrieve an order's status by calling [TP\\_GetOrder](#). Eligible TransferOrderDetail StatusIDs:
  - 0** Transfer request created - awaiting fax
  - 9** Awaiting auto verification of transfer request
  - 10** Unable to retrieve current domain contacts from UWhois
  - 11** Auto verification of transfer request initiated
  - 12** Awaiting for auto transfer string validation
  - 13** Domain awaiting transfer initiation
  - 28** Fax received - awaiting registrant verification
  - 29** Awaiting manual fax verification.

## Example

The following query requests that transfer order ID **445413** be cancelled, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_CancelOrder&
uid=resellid&pw=resellpw&transferOrderID=445413&responsetype=xml
```

In the response, the return value **True** for the **success** parameter confirms the successful cancellation of the order:

```
<?xml version="1.0" ?>
<interface-response>
  <success>True</success>
  <Command>TP_CANCELORDER</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

---

# TP\_CreateOrder

---

## Description

### Definition

Transfer domains into an account. Accepts **Fax**, **AutoVerification**, and **EPP** order types.

### Usage

Use this command to create an order to transfer domains from another registrar to eNom or one of its resellers.

You can also use this command to create but not submit a transfer order, using the PreConfig parameter.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferNew.asp>

On the **transfer a name** page, the **next** button calls the **TP\_CreateOrder** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- All domain names in the order must be in top-level domains supported by this registrar.
- To transfer EPP names, the query must include the authorization key from the Registrar. On enom.com, the authorization key is displayed at the bottom of the **Contact/Whols Information** page, accessed from the **Domain Control Panel**.
- When using the **Fax** order type, the registrant contact information must match the current Whois registrant.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DomainCount</b>	Required	The number of domain names to be submitted on the order. This number must match the actual number of names submitted.	4

Param name	Obligation	Definition	Max size
<b>OrderType</b>	<b>Required</b>	Permitted values are <b>Fax</b> or <b>Autoverification</b>	20
<b>SLDX</b> <i>X=1 to DomainCount</i>	<b>Required</b>	Second-level domain name (for example, enom in enom.com)	63
<b>TLDX</b>	<b>Required</b>	Top-level domain name (extension)	15
<b>AuthInfoX</b>	<b>Required</b> for EPP TLDs	Current ("losing") registrar's authorization key	20
<b>UseContacts</b>	Optional	Set = <b>1</b> to transfer existing WhoIs contacts when the transfer is complete	1
<i>ExtendedAttributes</i>	<b>Required</b> for TLDs that use extended attributes, when <b>UseContacts =0</b>	Extended attributes, required for some country code TLDs. You can retrieve a list of required extended attributes for any TLD using the <a href="#">GetExtAttributes</a> command.	n/a
<b>UseCreditCard</b>	Optional for resellers who use our credit card processing AND want to charge this transaction to the credit card included in this query string	Permitted values are <b>yes</b> and <b>no</b> . The credit card supplied in this query string is charged only if <b>UseCreditCard=yes</b> . If this param is omitted or if <b>UseCreditCard=no</b> , the account balance rather than the credit card is debited for this transaction. This is true even if the query string includes all the Registrant contact and credit card information.	3
<b>EndUserIP</b>	<b>Required</b> for our CC processing	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15
<b>RegistrantAddress1</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant city	60
<b>RegistrantCountry</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant country	60
<b>RegistrantEmailAddress</b>	Optional; <b>Required</b> for Fax orders	Registrant email address	128

Param name	Obligation	Definition	Max size
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFirstName</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant first name	60
<b>RegistrantLastName</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant last name	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantOrganizationName</b>	Optional; <b>Required</b> for Fax orders	Registrant organization	60
<b>RegistrantPhone</b>	Optional; <b>Required</b> for Fax orders and for our CC processing	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantPostalCode</b>	<b>Required</b> for our CC processing	Registrant postal code	16
<b>RegistrantStateProvince</b>	<b>Required</b> for our CC processing	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>CardType</b>	<b>Required</b> for our CC processing	Credit card type. Permitted values are <b>Visa, Mastercard, AmEx, Discover</b>	20
<b>CCName</b>	<b>Required</b> for our CC processing	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> for our CC processing	Credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> for our CC processing	Expiration month of the credit card, in format <i>MM</i>	2
<b>CreditCardExpYear</b>	<b>Required</b> for our CC processing	Expiration year of the credit card, in format <i>YYYY</i>	4
<b>CVV2</b>	<b>Required</b> for our CC processing	Credit card verification code	4

Param name	Obligation	Definition	Max size
<b>CCAddress</b>	Required for our CC processing	Credit card billing address	60
<b>ChargeAmount</b>	Required for our CC processing	Amount to charge this credit card. Required format is <i>DD.cc</i>	6
<b>PreConfig</b>	Optional	Set = <b>1</b> to create, but not send, the order at this time. Using this option allows you to use <a href="#">TP_UpdateOrderDetail</a> to modify <b>DomainPassword</b> , <b>Lock</b> , <b>Renew</b> , and contacts before submitting the order. When you are ready to submit the order, call <a href="#">TP_SubmitOrder</a>	1
<b>DomainPassword</b>	Optional	Set a domain access password on the domain name	16
<b>Lock</b>	Optional	Set = <b>1</b> to set RegistrarLock option	1
<b>Renew</b>	Optional	Set = <b>1</b> to set Auto-Renew option	1
<b>AuthString</b>	Optional	Authorization string for automated transfer order entries (approved accounts only)	100
<b>ResponseType</b>	Optional in all cases	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TransferOrderID</b>	Transfer order number.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- Example of SLD and TLD params: **SLD1=firstSLD TLD1=firstTLD, SLD2=secondSLD TLD2=secondTLD**.
- Additional params for contact information can be passed by replacing Registrant in the param names above with **Tech**, **Admin** or **AuxBilling**.
- If **UseContacts** is set =**1** and contact information is passed in the URL, current Whois contacts are transferred and preconfigured contacts (passed in the URL) are ignored.
- Automatic transfer of Whois information is available only for the largest registrars.
- An **OrderType** of **Fax** requires a signed fax to process the order, an **OrderType** of **Autoverification** uses an electronic verification process to authorize and initiate the transfer.

## Example

The following query requests the creation of an **autoverification** transfer order, to transfer domains **resellerdocs2.net** and **resellerdocs3.info**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_CreateOrder&
uid=resellid&pw=resellpw&orderType=AutoVerification&
sld1=resellerdocs2&tld1=net&sld2=resellerdocs3&tld2=info&domaincount=2&
responsetype=xml
```

The response confirms the successful creation of transfer order **445413**, and gives details of the transfer:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorder>
    <transferorderid>445413</transferorderid>
    <orderdate>7/29/2002 5:19:29 PM</orderdate>
    <ordertypeid>1</ordertypeid>
    <ordertypedesc>Auto Verification</ordertypedesc>
    <statusid>4</statusid>
    <statusdesc>Processing</statusdesc>
    <authamount>17.90</authamount>
    <version>1</version>
    <transferorderdetail>
      <transferorderdetailid>301770</transferorderdetailid>
      <sld>resellerdocs2</sld>
      <tld>net</tld>
      <statusid>9</statusid>
      <statusdesc>Awaiting auto verification of transfer request</statusdesc>
      <price>8.95</price>
      <usecontacts>0</usecontacts>
    </transferorderdetail>
    <transferorderdetail>
      <transferorderdetailid>301771</transferorderdetailid>
      <sld>resellerdocs3</sld>
      <tld>info</tld>
      <statusid>9</statusid>
      <statusdesc>Awaiting auto verification of transfer request</statusdesc>
      <price>8.95</price>
      <usecontacts>0</usecontacts>
    </transferorderdetail>
    <transferorderdetailcount>2</transferorderdetailcount>
  </transferorder>
  <success>True</success>

# TP\_GetDetailsByDomain

## Description

### Definition

Get transfer order information for a domain using *sld.tld*.

### Usage

Use this command to retrieve status information on one domain name that is in the process of transferring.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferStatus.asp?transferorderid=445431>

On the **Transfer Order Detail** page, one row of the **Domain Name** table returns the same information as one query using the **TP\_GetDetailsByDomain** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must be in a transfer order that belongs to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
<b>OrderCount</b>	Number of transfer orders that have been submitted for this domain.
<b>OrderIDX</b> X=1 to OrderCount	Transfer order detail number. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .

Param name	Definition
<b>OrderDateX</b>	The date the order was submitted. Indexed <i>X</i> when <b>ResponseType=HTML</b> or <b>Text</b> .
<b>StatusIDX</b>	TransferOrderDetail status ID -- a number that indicates the status of this domain in the transfer process. See Notes. Indexed <i>X</i> when <b>ResponseType=HTML</b> or <b>Text</b> .
<b>StatusDescX</b>	TransferOrderDetail status description—a text description of the status of this domain in the transfer process. See Notes. Indexed <i>X</i> when <b>ResponseType=HTML</b> or <b>Text</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- TransferOrderDetail StatusID is the status of this domain in the transfer process:
  - 0**=Transfer request created - awaiting fax
  - 5**=Transferred successfully
  - 9**=Awaiting auto verification of transfer request
  - 10**=Unable to retrieve current domain contacts from UWhois
  - 11**=Auto verification of transfer request initiated
  - 12**=Awaiting for auto transfer string validation
  - 13**=Domain awaiting transfer initiation
  - 14**=Domain transfer initiated and awaiting approval
  - 15**=Canceled - cannot obtain domain contacts from UWhois
  - 16**=Canceled - domain contacts did not respond to verification e-mail
  - 17**=Canceled - domain contacts did not approve transfer of domain
  - 18**=Canceled - domain validation string is invalid
  - 19**=Canceled - Whois information provided does not match current registrant
  - 20**=Canceled - Domain is currently not registered and cannot be transferred
  - 21**=Canceled - Domain is already registered in account and cannot be transferred
  - 22**=Canceled - Domain is locked at current registrar
  - 23**=Canceled - Transfer already initiated for this domain
  - 24**=Canceled - Unable to transfer due to unknown error
  - 25**=Canceled - Transfer rejected by losing registrar
  - 26**=Canceled - Transfer authorization fax not received
  - 27**=Canceled by customer
  - 28**=Fax received - awaiting registrant verification
  - 29**=Awaiting manual fax verification
  - 30**=Canceled - Domain name is invalid or is Invalid for Transfers
  - 35**=Transfer request not yet submitted.

## Example

The following query requests transfer information for **resellerdocs2.net**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetDetailsByDomain&
uid=resellid&pw=resellpw&sld=resellerdocs2&tid=net&responsetype=xml
```

The response confirms that **resellerdocs2.net** is part of transfer order ID **445413**, and gives current status of that order:

```
<?xml version="1.0" ?>
<interface-response>
  <TransferOrder>
    <orderid>445413</orderid>
    <orderdate>3/29/2003 5:19:29 PM</orderdate>
    <statusid>9</statusid>
    <statusdesc>Awaiting auto verification of transfer request</statusdesc>
  </TransferOrder>
  <ordercount>1</ordercount>
  <Command>TP_GETDETAILSBYDOMAIN</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# TP\_GetOrder

---

## Description

### Definition

Get a list of domains in a single transfer order.

### Usage

Use this command to retrieve status information on each item in a transfer order.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferStatus.asp>

On the **transfer a name** page, clicking a link in the **Transfer Order ID** column calls the **TP\_GetOrder** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order ID must be valid.
- The transfer order must have originated from this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderID</b>	Required	Transfer order ID number. You can retrieve this number by calling the <a href="#">TP_GetOrderStatuses</a> command.	10

## Returned parameters and values

Param name	Definition
<b>TransferOrderID</b>	Transfer order number
<b>OrderDate</b>	Date the order was entered
<b>OrderTypeID</b>	Type ID of order
<b>OrderTypeDesc</b>	Type of order

Param name	Definition
<b>StatusID</b>	Status ID of order. See Notes.
<b>StatusDesc</b>	Status description of order. See Notes.
<b>AuthAmount</b>	Charge amount for this order
<b>TransferOrderDetailID</b>	Transfer order detail number
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>Price</b>	Cost of the name transfer
<b>UseContacts</b>	Use original contacts or not
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- TransferOrder StatusID:
  - 0** Transfer request has been made
  - 1** Fax has been received
  - 2** Order canceled
  - 3** Order complete
  - 4** Processing
  - 5** Order not submitted
- TransferOrderDetail StatusID:
  - 0** Transfer request created - awaiting fax
  - 5** Transferred successfully
  - 9** Awaiting auto verification of transfer request
  - 10** Unable to retrieve current domain contacts from UWhois
  - 11** Auto verification of transfer request initiated
  - 12** Awaiting for auto transfer string validation
  - 13** Domain awaiting transfer initiation
  - 14** Domain transfer initiated and awaiting approval
  - 15** Canceled - cannot obtain domain contacts from UWhois
  - 16** Canceled - domain contacts did not respond to verification e-mail
  - 17** Canceled - domain contacts did not approve transfer of domain
  - 18** Canceled - domain validation string is invalid
  - 19** Canceled - Whois information provided does not match current registrant
  - 20** Canceled - Domain is currently not registered and cannot be transferred
  - 21** Canceled - Domain is already registered in account and cannot be transferred
  - 22** Canceled - Domain is locked at current registrar
  - 23** Canceled - Transfer already initiated for this domain
  - 24** Canceled - Unable to transfer due to unknown error
  - 25** Canceled - Transfer rejected by losing registrar
  - 26** Canceled - Transfer authorization fax not received
  - 27** Canceled by customer
  - 28** Fax received - awaiting registrant verification

- 29** Awaiting manual fax verification
- 30** Canceled - Domain name is invalid, or is invalid for transfers
- 35** Transfer request not yet submitted.

## Example

The following query requests transfer information for transfer order ID **445413**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetOrder&
uid=resellid&pw=resellpw&TransferOrderID=445413&responsetype=xml
```

The response provides information on transfer order ID **445413**:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorder>
    <transferorderid>445413</transferorderid>
    <orderdate>7/29/2002 5:19:29 PM</orderdate>
    <ordertypeid>1</ordertypeid>
    <ordertypedesc>Auto Verification</ordertypedesc>
    <statusid>4</statusid>
    <statusdesc>Processing</statusdesc>
    <authamount>17.90</authamount>
    <version>1</version>
    <transferorderdetail>
      <transferorderdetailid>301770</transferorderdetailid>
      <sld>resellerdocs2</sld>
      <tld>net</tld>
      <statusid>9</statusid>
      <statusdesc>Awaiting auto verification of transfer request</statusdesc>
      <price>8.95</price>
      <usecontacts>0</usecontacts>
    </transferorderdetail>
    <transferorderdetail>
      <transferorderdetailid>301771</transferorderdetailid>
      <sld>resellerdocs3</sld>
      <tld>info</tld>
      <statusid>9</statusid>
      <statusdesc>Awaiting auto verification of transfer request</statusdesc>
      <price>8.95</price>
      <usecontacts>0</usecontacts>
    </transferorderdetail>
    <transferorderdetailcount>2</transferorderdetailcount>
  </transferorder>
  <Command>TP_GETORDER</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>

# TP\_GetOrderDetail

---

## Description

### Definition

Get information for a single domain on a transfer order.

### Usage

Use this command to retrieve a long list of information on a single domain that is in the process of transferring.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order detail ID must belong to a transfer order created under this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderDetailID</b>	Required	Transfer order detail number returned by calling <a href="#">TP_GetOrder</a> .	10

## Returned parameters and values

Param name	Definition
<b>TransferOrderDetailID</b>	Transfer order detail number
<b>SLD</b>	Second level name
<b>TLD</b>	Top level name
<b>Lock</b>	Lock status of the name
<b>Renew</b>	Renew status of the name
<b>DomainPassword</b>	Password to be set for the name
<b>StatusID</b>	Status ID of this order. See Notes.

Param name	Definition
<b>StatusDesc</b>	Status description of this order. See Notes.
<b>Price</b>	Charge amount for this order
<b>UseContacts</b>	Use original contacts or not
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- TransferOrderDetail **StatusID** and **StatusDesc**:
  - 0**=Transfer request created - awaiting fax
  - 5**=Transferred successfully
  - 9**=Awaiting auto verification of transfer request
  - 10**=Unable to retrieve current domain contacts from UWhois
  - 11**=Auto verification of transfer request initiated
  - 12**=Awaiting for auto transfer string validation
  - 13**=Domain awaiting transfer initiation
  - 14**=Domain transfer initiated and awaiting approval
  - 15**=Canceled - cannot obtain domain contacts from UWhois
  - 16**=Canceled - domain contacts did not respond to verification e-mail
  - 17**=Canceled - domain contacts did not approve transfer of domain
  - 18**=Canceled - domain validation string is invalid
  - 19**=Canceled - Whois information provided does not match current registrant
  - 20**=Canceled - Domain is currently not registered and cannot be transferred
  - 21**=Canceled - Domain is already registered in account and cannot be transferred
  - 22**=Canceled - Domain is locked at current registrar
  - 23**=Canceled - Transfer already initiated for this domain
  - 24**=Canceled - Unable to transfer due to unknown error
  - 25**=Canceled - Transfer rejected by losing registrar
  - 26**=Canceled - Transfer authorization fax not received
  - 27**=Canceled by customer
  - 28**=Fax received - awaiting registrant verification
  - 29**=Awaiting manual fax verification
  - 30**=Canceled - Domain name is invalid or is Invalid for Transfers
  - 35**=Transfer request not yet submitted.

## Example

The following query requests information on transfer order detail (one item in a transfer order) ID **301770**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetOrderDetail&
uid=resellid&pw=resellpw&TransferOrderDetailID=301770&responsetype=xml
```

The response indicates that transfer order detail ID **301770** is for the transfer of domain **resellerdocs2.net**, and provides details of the order:

```

<?xml version="1.0" ?>
<interface-response>
  <transferorderdetail>
    <transferorderdetailid>301770</transferorderdetailid>
    <sld>resellerdocs2</sld>
    <tld>net</tld>
    <lock>True</lock>
    <renew>False</renew>

# TP\_GetOrderReview

---

## Description

### Definition

Retrieve information on a transfer order.

### Usage

Use this comand to retrieve information on a transfer order— a request originated by you to transfer a name into your account.

This command differs from the [TP\\_GetOrderDetail](#) command in that [TP\\_GetOrderDetail](#) retrieves a larger set of information, including the status of the order and detailed contact information.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order must have originated from this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderID</b>	Required	Order ID number that was returned when you originated your transfer. You can also retrieve this number using the <a href="#">TP_GetOrderStatuses</a> comand.	7
<b>OrderType</b>	Required	Permitted value is <b>Transfer</b>	8
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TransferOrderID</b>	ID number of the transfer order
<b>OrderType</b>	Type of the order
<b>TransferOrderDetailID</b>	Transfer order detail ID number, from our records
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>Price</b>	Price that will be charged to this account if the transfer is successful
<b>Lock</b>	Registrar lock setting that was specified in the transfer order
<b>Renew</b>	Auto-renew setting that was specified in the transfer order
<b>DomainPassword</b>	Domain password, if one was specified in the transfer order
<b>UseContacts</b>	Use this account's default contacts
<b>AuthInfo</b>	EPP Key associated with this domain. Some TLDs require this code to authorize a transfer
<b>RRProcessor</b>	RRProcessor we use
<b>TransferOrderDetailCount</b>	Number of domain names in this order
<b>TransferTotalPrice</b>	Total charges if all domains in this order transfer successfully
<b>AuthInfoStillRequired</b>	<b>Yes</b> indicates we have not yet received the EPP Key for this domain
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests details on transfer order **465681** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetOrderReview&
uid=resellid&pw=resellpw&TransferOrderID=465681&OrderType=Transfer&
responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorderid>465681</transferorderid>
  <ordertype>Transfer</ordertype>
  <transferorderreview>
    <transferorderdetail>
      <transferorderdetailid>311389</transferorderdetailid>
      <sld>transferdomain</sld>
      <tld>com</tld>
      <price>8.95</price>
```

```

    <lock>True</lock>
    <renew>True</renew>
    <domainpassword />
    <usecontacts>1</usecontacts>
    <authinfo />
    <RRProcessor>Reseller Documents Inc.</RRProcessor>
  </transferorderdetail>
  <transferorderdetailcount>1</transferorderdetailcount>
  <transfertotalprice>8.95</transfertotalprice>
  <authinfostillrequired>No</authinfostillrequired>
</transferorderreview>
<Command>TP_GETORDERREVIEW</Command>

# TP\_GetOrdersByDomain

---

## Description

### Definition

Retrieve transfer information for a domain name.

### Usage

Use this command to list a history and status of transfer orders for a domain name.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
UID	Required	Account login ID	20
PW	Required	Account password	20
SLD	Required	Second-level domain name (for example, enom in enom.com)	63
TLD	Required	Top-level domain name (extension)	15

## Returned parameters and values

Param name	Definition
OrderCount	Number of transfer orders that have been submitted for this domain.
TransferOrderIDX X=1 to OrderCount)	Transfer order detail number. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .
LoginIDX	The account this transfer order is in. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .
OrderDateX	The date the order was submitted. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .

Param name	Definition
<b>OrderStatusX</b>	Current status of the order. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .
<b>StatusIDX</b>	TransferOrder StatusID number. Options are: <b>0</b> New <b>1</b> Authorization Succeeded <b>2</b> Authorization Failed <b>3</b> Processing <b>4</b> Order queued <b>5</b> Ready for Billing <b>6</b> Order complete <b>7</b> Order canceled. Indexed X when <b>ResponseType=HTML</b> or <b>Text</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests transfer order information for domain name **resellerdocs2.net**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetOrdersByDomain&
uid=resellid&pw=resellpw&sld=resellerdocs2&tld=net&responsestype=xml
```

The response indicates that **resellerdocs2.net** is in transfer order ID **445413**, initiated by account **resellid**:

```
<?xml version="1.0" ?>
<interface-response>
  <TransferOrder>
    <transferorderid>445413</transferorderid>
    <loginid>resellid</loginid>
    <orderdate>7/29/2002 5:19:29 PM</orderdate>
    <orderstatus>Processing</orderstatus>
    <statusid>4</statusid>
  </TransferOrder>
  <ordercount>1</ordercount>
  <Command>TP_GETORDERSBYDOMAIN</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

---

# TP\_GetOrderStatuses

---

## Description

### Definition

Get a list of orders including **Closed** for the last 6 months.

### Usage

Use this command to list all transfer orders for an account ID.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/Transfers.asp>

On the **transfer a name** page, the **Click here to view existing transfer orders** link calls the **TP\_GetOrderStatuses** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>IncludeClosedOrders</b>	Optional	Set = <b>1</b> to return closed orders in the list.	1

## Returned parameters and values

Param name	Definition
<b>TransferOrderID</b>	Transfer order number
<b>OrderDate</b>	Date the order was entered
<b>OrderTypeID</b>	Type ID of order
<b>OrderTypeDesc</b>	Type of order

Param name	Definition
<b>StatusID</b>	Status ID of transfer order. Options: <b>0</b> Transfer request has been made <b>1</b> Fax has been received <b>2</b> Order canceled <b>3</b> Order complete <b>4</b> Processing <b>5</b> Order not submitted
<b>StatusDesc</b>	Status description of transfer order. See text descriptions of statuses in <b>StatusID</b> parameter, above.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- The OrderIDs returned can be used to call functions to view or update transfer orders.

## Example

The following query requests the status of all transfer orders by account **resellid**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GetOrderStatuses&
uid=resellid&pw=resellpw&responsetype=xml
```

The response lists the status of every transfer order placed by **resellid**. The complete output for transfer order ID **445413** is included here; details of other orders are abridged:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorder>
    <transferorderid>445413</transferorderid>
    <orderdate>2002-07-29T17:19:29.437</orderdate>
    <statusid>4</statusid>
    <tos>
      <statusdesc>Processing</statusdesc>
      <ordertypeid>1</ordertypeid>
      <tot>
        <ordertypedesc>Auto Verification</ordertypedesc>
      </tot>
    </tos>
  </transferorder>
  <transferorder>
    .
    .
    .
  </transferorder>
  <FoundAtLeastOnePendingOrder>False</FoundAtLeastOnePendingOrder>
```

```
<Command>TP_GETORDERSTATUSES</Command>
<ErrCount>0</ErrCount>
<Server>Dev Workstation</Server>
<Site>enom</Site>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

# TP\_GetTLDInfo

---

## Description

### Definition

Retrieve a list of information required for transferring domains, for each TLD.

### Usage

Use this command to list the information that each Registry requires when domains are transferred.

A typical use for this command is administrative. When your customers submit transfer requests, you can use this command to guide you in what is required for processing the orders.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>QueryFlag</b>	Required	Which subset of TLDs to return. Permitted values are: <b>0</b> All TLDs <b>1</b> Transferable TLDs <b>2</b> Transferable via auto-verification <b>3</b> Transferable via fax <b>4</b> Authorization key required for transfer <b>5</b> Lockable TLDs <b>6</b> Both lockable and transferable	1
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TLDID</b> X	ID number for this TLD, used by our database. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>TLD</b> X	Top-level domain name (extension). Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Protocol</b> X	Registry protocol. Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>AbleToLock</b> X	Registry permits locking (user ability to prevent domain from being transferred without authorization)? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>RealTime</b> X	Registry processes domain registrations in real time? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Transferable</b> X	Is this TLD transferable? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>HasAuthInfo</b> X	Does this TLD require an authorization code for transfers? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>TransByAutoVeri</b> X	Does this Registry permit transfers by auto-verification? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>TransByFax</b> X	Does this Registry permit transfers by fax? Indexed X when <b>ResponseType=Text</b> or <b>HTML</b> .
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves a list of TLDs that satisfy **QueryFlag=6**—TLDs that are both lockable and transferable—and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_GETTLDINFO&
uid=resellid&pw=resellpw&QueryFlag=6&ResponseType=XML
```

In the response, a list of TLDs and their characteristics, and an ErrCount value 0, confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <tldtable>
    <tld>
      <TLDID>0</TLDID>
      <TLD>com</TLD>
      <Protocol>RRP</Protocol>
      <AbleToLock>True</AbleToLock>
      <RealTime>True</RealTime>
      <Transferable>True</Transferable>
```

```

    <HasAuthInfo>False</HasAuthInfo>
    <TransByAutoVeri>True</TransByAutoVeri>
    <TransByFax>True</TransByFax>
  </tld>
  <tld>
    <TLDID>1</TLDID>
    <TLD>net</TLD>
    <Protocol>RRP</Protocol>
    <AbleToLock>True</AbleToLock>
    <RealTime>True</RealTime>
    <Transferable>True</Transferable>
    <HasAuthInfo>False</HasAuthInfo>
    <TransByAutoVeri>True</TransByAutoVeri>
    <TransByFax>True</TransByFax>
  </tld>
  <tld>
    <TLDID>2</TLDID>
    <TLD>org</TLD>
    <Protocol>EPP</Protocol>
    <AbleToLock>True</AbleToLock>
    <RealTime>True</RealTime>
    <Transferable>True</Transferable>
    <HasAuthInfo>True</HasAuthInfo>
    <TransByAutoVeri>True</TransByAutoVeri>
    <TransByFax>True</TransByFax>
  </tld>
  <tld>
    <TLDID>3</TLDID>
    <TLD>cc</TLD>
    <Protocol>RRP</Protocol>
    <AbleToLock>True</AbleToLock>
    <RealTime>True</RealTime>
    <Transferable>True</Transferable>
    <HasAuthInfo>False</HasAuthInfo>
    <TransByAutoVeri>True</TransByAutoVeri>
    <TransByFax>True</TransByFax>

# TP\_ResendEmail

---

## Description

### Definition

Resend the Domain Transfer Request authorization email. This is the email we send to the Whois contact on record at the Registry, requesting their authorization to transfer the domain name into the account specified in this query string.

### Usage

Use this command to resend the Domain Transfer Request email for a transfer. You would typically use this command when the owner who is losing the domain updates their email address *after* we have sent an initial authorization email.

This command can only be used between the time we send an initial Domain Transfer Request email, and the time we receive a response.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

This command is not implemented on enom.com.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must be one that is transferring into this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Login ID of the account that requested the transfer (the gaining account)	20
<b>PW</b>	Required	Password of the account that requested the transfer (the gaining account)	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com) of the domain to be transferred	63
<b>TLD</b>	Required	Top-level domain name (extension) of the domain to be transferred	15
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Success</b>	<b>True</b> indicates the query was successful
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- If you are transferring a domain name between two of your own accounts at different registrars, you can reduce delays by updating your email address in the losing account before you submit a transfer order.
- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query resends confirmation emails for the transfer of **resellerdocs3.info**, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_RESENDEMAIL&
uid=resellid&pw=resellpw&SLD=resellerdocs3&tld=info&responsetype=xml
```

In the response, a **Success** value of **True** indicates that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <Success>True</Success>
  <Command>TP_RESENDEMAIL</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod>1</MinPeriod>
  <MaxPeriod>10</MaxPeriod>
  <Server>Reseller5</Server>
  <Site>enom</Site>
  <IsLockable>True</IsLockable>
  <IsRealTimeTLD>True</IsRealTimeTLD>
  <TimeDifference>+03.00</TimeDifference>
  <ExecTime>0.15625</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# TP\_ResubmitLocked

---

## Description

### Definition

Resubmit a request for a previously locked domain name.

### Usage

Use this command after you have previously submitted a transfer request, received an error message saying the domain was locked, and have had the registrant of the domain unlock it. This command may also be used to resubmit a transfer that was rejected because the domain was registered less than 60 days ago.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

On the **Transfer order detail** page, the **Resubmit locked domain** link (when it is present) calls the **TP\_ResubmitLocked** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order detail ID must be valid.
- The transfer order detail ID must belong to a domain that previously failed to transfer because it was locked.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderDetailID</b>	Required	Transfer Order Detail ID. To retrieve this value, use the <a href="#">TP_GetOrder</a> command.	10

## Returned parameters and values

Param name	Definition
<b>TransferOrderID</b>	New Transfer Order ID
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

Previously, account **resellid** had requested that a domain be transferred into this account, and received an e-mail stating that the transfer could not complete because the domain was locked. The owner of account **resellid** contacted the owner of the domain and had the lock removed. The following query resubmits the transfer request, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_ResubmitLocked&
uid=resellid&pw=resellpw&TransferOrderDetailID=607291&responsetype=xml
```

The **Success=True** parameter value in the response, and the new **TransferOrderID**, confirm a successful request:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorder>
    <transferorderid>952245</transferorderid>
  </transferorder>
  <success>True</success>
  <Command>TP_RESUBMITLOCKED</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# TP\_SubmitOrder

## Description

### Definition

Submit a preconfigured transfer order.

### Usage

Use this command to submit a transfer order that has been created and configured using the [TP\\_CreateOrder](#) command, but not submitted. Domain names in this status appear on the **Pending orders** page.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferNew.asp>

Enter a domain name and click **next**.

On the **Pending orders** page, the **submit** button calls the **TP\_SubmitOrder** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- To use our credit card processing, this must be an ETP reseller account.
- The **TransferOrderID** must identify an order that has been successfully created but not submitted.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderID</b>	Required	Transfer order ID number. To retrieve this value, use the <a href="#">TP_GetOrderStatuses</a> command.	10
<b>EndUserIP</b>	Required for our CC processing	End user's IP address. This is used in fraud checking, as part of our order processing service. Use format <i>NNN.NNN.NNN.NNN</i> .	15

Param name	Obligation	Definition	Max size
<b>UseCreditCard</b>	Optional for resellers who use our credit card processing AND want to charge this transaction to the credit card included in this query string	Permitted values are <b>yes</b> and <b>no</b> . The credit card supplied in this query string is charged only if <b>UseCreditCard=yes</b> . If this param is omitted or if <b>UseCreditCard=no</b> , the account balance rather than the credit card is debited for this transaction. This is true even if the query string includes all the Registrant contact and credit card information.	3
<b>RegistrantFirstName</b>	<b>Required</b> for our CC processing	Registrant first name	60
<b>RegistrantLastName</b>	<b>Required</b> for our CC processing	Registrant last name	60
<b>RegistrantAddress1</b>	<b>Required</b> for our CC processing	First line of Registrant address	60
<b>RegistrantAddress2</b>	Optional for our CC processing	Second line of Registrant address	60
<b>RegistrantCity</b>	<b>Required</b> for our CC processing	Registrant city	60
<b>RegistrantCountry</b>	<b>Required</b> for our CC processing	Registrant country. Two-letter country code is a permitted format.	60
<b>RegistrantPostalCode</b>	<b>Required</b> for our CC processing	Registrant postal code	16
<b>RegistrantPhone</b>	<b>Required</b> for our CC processing	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantEmailAddress</b>	<b>Required</b> for our CC processing	Registrant email address	128
<b>CardType</b>	<b>Required</b> for our CC processing	Credit card type. Permitted values are <b>Visa, Mastercard, AmEx, Discover</b>	20
<b>CCName</b>	<b>Required</b> for our CC processing	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> for our CC processing	Credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> for our CC processing	Expiration month of the credit card, in format <i>MM</i>	2
<b>CreditCardExpYear</b>	<b>Required</b> for our CC processing	Expiration year of the credit card, in format <i>YYYY</i>	4

Param name	Obligation	Definition	Max size
<b>CVV2</b>	<b>Required</b> for our CC processing	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> for our CC processing	Credit card billing address	60
<b>ChargeAmount</b>	<b>Required</b> for our CC processing	Amount to charge this credit card. Required format is <i>DD.cc</i>	6

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

Transfer order **445440** was created with command [TP\\_CreateOrder](#), with parameter **PreConfig=1**. With that parameter value, the order was created and a transfer order ID was assigned, but the order was not submitted instantly. The following query uses the **transfer order ID** to submit the preconfigured order, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_SubmitOrder&uid=resellid&pw=resellpw&TransferOrderID=445440&responsetype=xml
```

In the response, the error count of **0** indicates that the order was submitted successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <success>True</success>
  <Command>TP_SUBMITORDER</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

---

# TP\_UpdateOrderDetail

---

## Description

### Definition

Update a preconfigured transfer order before submitting the order.

### Usage

Use this command to configure registrar lock, auto-renew, domain password, or contact information for a domain name that is in the process of being transferred to eNom.

This command is typically used after an order has been created using the [TP\\_CreateOrder](#) command with the parameter **PreConfig=1**. Once the transfer order has been configured using this command, the next step is typically to use the [TP\\_SubmitOrder](#) command, which causes the transfer order to be processed.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/TransferNew.asp>

Enter a domain name and click **next**.

On the **Pending orders** page, click the domain name.

In the **Editing transfer order for domain name** box, the check boxes set the parameter values for the **TP\_UpdateOrderDetail** command, and the **next** button calls the command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The transfer order detail ID must be valid and must be part of an order created under this account.
- The transfer order must be in a **StatusID** of **5 (Order not submitted)**.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TransferOrderDetailID</b>	Required	Transfer order detail ID. Use the <a href="#">TP_GetOrder</a> command to retrieve this value.	10

Param name	Obligation	Definition	Max size
<b>Lock</b>	Optional	Set registrar lock on the name. Permitted values are <b>on</b> or <b>off</b> .	3
<b>Renew</b>	Optional	Set auto-renew. Permitted values are <b>on</b> or <b>off</b> .	3
<b>DomainPassword</b>	Optional	Set a domain password on the name	60
<b>RegistrantAddress1</b>	Optional; <b>Required</b> for Fax orders	Registrant address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Optional; <b>Required</b> for Fax orders	Registrant city	60
<b>RegistrantCountry</b>	Optional; <b>Required</b> for Fax orders	Registrant country	60
<b>RegistrantEmailAddress</b>	Optional; <b>Required</b> for Fax orders	Registrant email address	128
<b>RegistrantFax</b>	Optional	Registrant fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantFirstName</b>	Optional; <b>Required</b> for Fax orders	Registrant first name	60
<b>RegistrantLastName</b>	Optional; <b>Required</b> for Fax orders	Registrant last name	60
<b>RegistrantJobTitle</b>	Optional	Registrant job title	60
<b>RegistrantOrganizationName</b>	Optional; <b>Required</b> for Fax orders	Registrant organization	60
<b>RegistrantPhone</b>	Optional; <b>Required</b> for Fax orders	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	20
<b>RegistrantPostalCode</b>	Optional	Registrant postal code	16
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>UseContacts</b>	Optional	Set = <b>1</b> to transfer existing WhoIs contacts when the transfer is complete	1
<i>ExtendedAttributes</i>	<b>Required</b> for TLDs that use extended attributes, when UseContacts =0	Extended attributes, required for some country code TLDs. You can retrieve a list of required extended attributes for any TLD using the <a href="#">GetExtAttributes</a> command.	n/a
<b>RegistrantUseContact</b>	Optional	If set = <b>none</b> then Billing contact will be used, otherwise Registrant contact data must be submitted	3

Param name	Obligation	Definition	Max size
<b>Tech*</b>	Optional	Technical contact data. See Note.	*
<b>TechUseContact</b>	Optional	If set = <b>none</b> then no contact will be used, otherwise Tech contact data must be submitted.	3
<b>AuxBilling*</b>	Optional	Auxilliary Billing contact data. See Note.	*
<b>AuxBillingUseContact</b>	Optional	If set = <b>none</b> then no contact will be used, otherwise Auxbilling contact data must be submitted.	3

## Returned parameters and values

Param name	Definition
<b>TransferOrderDetailID</b>	Transfer order detail number
<b>SLD</b>	Second-level domain name
<b>TLD</b>	Top-level domain name
<b>lock</b>	Registrar lock status
<b>renew</b>	Auto-renew status
<b>domainpassword</b>	Password to set for the domain name
<b>statusid</b>	Status ID of the order
<b>statusdesc</b>	Description of the status
<b>price</b>	Transfer price
<b>usecontacts</b>	Use the current contacts flag
<b>Registrant*</b>	Registrant contact data
<b>AuxBilling*</b>	Auxilliary Billing contact data
<b>Tech*</b>	Technical contact data
<b>Admin*</b>	Administrative contact data
<b>Billing*</b>	Billing contact data
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- To update Technical or Auxilliary Billing contacts submit the contact data by replacing **Registrant\*** param names with **Tech\*** or **AuxBilling\*** param names.

## Example

The following query requests that for transfer order detail ID **301770**, the registrar **lock** and automatic **renew** options both be set to **On**. It also instructs that contact information should remain unchanged, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TP_UpdateOrderDetail&
uid=resellid&pw=resellpw&TransferOrderDetailID=301770&Lock=On&Renew=On&
RegistrantUseContact=none&TechUseContact=none&AuxBillingUseContact=none&responsetype=xml
```

The response indicates the successful setting of the registrar **lock** and automatic **renew** options:

```
<?xml version="1.0" ?>
<interface-response>
  <transferorderdetail>
    <transferorderdetailid>301770</transferorderdetailid>
    <sld>resellerdocs2</sld>

# TRAFFIC\_GetAccountDetails

---

## Description

### Definition

Retrieve current configuration details for a Traffic Vista account.

### Usage

Use this command to retrieve current configuration details for a Traffic Vista account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/traffic/trafficmanager.asp>

In the **my vista accounts** table, clicking on any Traffic Vista account name calls the **TRAFFIC\_GetAccountDetails** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The Traffic Vista account must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TrafficLoginID</b>	Required	Traffic Vista account name	16
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>LoginID</b>	Account name of this Traffic Vista account
<b>StatusID</b>	ID number of this account's current status

Param name	Definition
<b>Status</b>	Description of this account's current status
<b>OptionID</b>	ID number of this Traffic Vista account's current overage handling option
<b>PageViewCount</b>	Actual page view count for this Traffic Vista account, for this billing cycle
<b>PageViews</b>	Page views subscribed for this billing cycle
<b>UpgradeID</b>	ID number for the page view upgrade option for this Traffic Vista account
<b>ResetPageViews</b>	Reset setting for this Traffic Vista account
<b>SnippetID</b>	GUID embedded in the code snippet for this Traffic Vista account
<b>CodeSnippet</b>	host and domain in the code snippet for this Traffic Vista account
<b>RedirectorNameCount</b>	Number of domains in this Traffic Vista account that use our redirector services
<b>BillingDate</b>	Next billing date for this Traffic Vista account
<b>CurrentPrice</b>	Current monthly fee for this Traffic Vista account
<b>ResetPrice</b>	Reset price for this Traffic Vista account
<b>Terminate</b>	Is this Traffic Vista account flagged for termination at the end of this billing cycle?
<b>TerminateDate</b>	If flagged for termination, the date on which this Traffic Vista account will become inactive
<b>ShowNextBillingInfo</b>	Show price quote for next month?
<b>UpgradeID</b>	ID number of this upgrade option
<b>UpgradeDesc</b>	Text description of this upgrade option
<b>OptionID</b>	ID number of this overage handling option
<b>OptionDesc</b>	Text description of this overage handling option
<b>OverageFee</b>	Monthly fee for each additional 100,000 page views
<b>Tracked</b>	Number of redirected domain names in this Traffic Vista account
<b>InRedirector</b>	Number of redirected domain names in this domain name account
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves the current status of Traffic Vista account **test04** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_GETACCOUNTDETAILS&uid=resellid&pw=resellpw&trafficloginid=test04&ResponseType=xml
```

In the response, the presence of account details confirms that the query was successful:

```

<?xml version="1.0" ?>
<interface-response>
  <trafficdetails>
    <accountdetails loginid="test04" statusid="1" status="Active" optionid="1"
      pageviewcount="0" pageviews="500000" upgradeid="1" resetpageviews=""
      snippetid="11DEE9BB-9F89-430B-A976-B1C3634DB6C1"
      codesnippet="http://vista.namenerd.com" redirectornamecount="2"
      billingdate="10/15/2004" currentprice="54.75" resetprice="" terminate="False"
      terminatedate="" />
  </trafficdetails>
  <ShowNextBillingInfo>
    <ShowNextBillingInfo>False</ShowNextBillingInfo>
  </ShowNextBillingInfo>
  <upgradeoptions>
    <accountdetails UpgradeID="1" UpgradeDesc="Auto Upgrade. Upgrade me to fit my
      account growth if I went over last month." />
    <accountdetails UpgradeID="2" UpgradeDesc="Manual Upgrade/Downgrade. Do not
      automatically update my account page view amount." />
  </upgradeoptions>
  <overageoptions>
    <accountdetails OptionID="1" OptionDesc="Continue gathering data and charge me
      an overage fee for every 50K PVs" />
    <accountdetails OptionID="2" OptionDesc="Temporarily disable until next month" />
  </overageoptions>
  <overagefee>8.95</overagefee>

# TRAFFIC\_GetAccounts

---

## Description

### Definition

Retrieve a list of Traffic Vista accounts in this domain name account.

### Usage

Use this command to retrieve a list of the Traffic Vista accounts in this domain name account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/traffic/>

In the main menu, clicking the **manage** link calls the **TRAFFIC\_GetAccounts** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TrafficID</b>	ID number, from our internal records, of this Traffic Vista account
<b>Login</b>	Login name of this Traffic Vista account, assigned by the user
<b>Overage</b>	Overage option of this Traffic Vista account. <b>1</b> indicates charge an overage fee; <b>2</b> indicates disable until beginning of next billing cycle.
<b>PageViewCount</b>	Total page views by unique IPs for this Traffic Vista account, for this billing cycle

Param name	Definition
<b>PageViews</b>	Page views paid for this billing cycle
<b>RedirectorNameCount</b>	Number of domain names in your Traffic Vista account that use our redirector services
<b>BillingDate</b>	Next scheduled billing date for this Traffic Vista account
<b>StatusID</b>	Status ID number for this Traffic Vista account. <b>1</b> indicates on or active.
<b>Status</b>	Status description for this Traffic Vista account, corresponding to the <b>StatusID</b> value.
<b>Terminate</b>	Is this Traffic Vista account flagged for cancellation at the end of this billing cycle?
<b>TerminateDate</b>	If <b>Terminate</b> value is <b>True</b> , date this account will become inactive
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves current Traffic Vista subscriptions in this account, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_GETACCOUNTS&
uid=resellid&pw=resellpw&ResponseType=xml
```

In the response, **TrafficAccounts** values and an **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <trafficaccounts>
    <account trafficid="167" login="test062404" overage="2" pageviewcount="0"
      pageviews="500000" redirectornamecount="0" billingdate="7/24/2004"
      statusid="1" status="Active" terminate="False" terminatedate="N/A" />
    <account trafficid="339" login="test1" overage="1" pageviewcount="0"
      pageviews="100000" redirectornamecount="0" billingdate="10/15/2004"
      statusid="1" status="Active" terminate="False" terminatedate="N/A" />
    <account trafficid="338" login="tv091504" overage="1" pageviewcount="0"
      pageviews="500000" redirectornamecount="2" billingdate="10/15/2004"
      statusid="1" status="Active" terminate="False" terminatedate="N/A" />
  </trafficaccounts>
  <Command>TRAFFIC_GETACCOUNTS</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>LOCALHOST</Server>
```

```
<Site>enom</Site>
<IsLockable />
<IsRealTimeTLD />
<TimeDifference>+0.00</TimeDifference>
<ExecTime>0.078125</ExecTime>
<Done>true</Done>

# TRAFFIC\_GetDefaultConfig

---

## Description

### Definition

Retrieve the page view overage settings for Traffic Vista.

### Usage

Use this command to retrieve the page view overage settings for Traffic Vista.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/traffic/>

Clicking any **Get Traffic Vista Now** link calls the **TRAFFIC\_GetDefaultConfig** command. The command is used to fill in the **Step 2: . . . page view overage** section.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>OverageOptions OptionID</b>	ID number and description of this page overage option
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the overage options for this domain name account, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_GetDefaultConfig&uid=resellid&pw=resellpw&responsetype=xml
```

In the response, the **overageoptions** node and the **ErrCount** value **0** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <overageoptions>
    <overageoptions OptionID="1" description="Continue gathering data . . ." />
    <overageoptions OptionID="2" description="Temporarily disable until next month" />
  </overageoptions>
  <Command>TRAFFIC_GETDEFAULTCONFIG</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>RESELLERTEST</Server>
  <Site>enom</Site>
  <IsLockable />

# TRAFFIC\_GetRedirectedDomains

---

## Description

### Definition

Retrieve a list of the domains in this domain name account that use either **URL Frame** or **URL Redirect** in their host name configurations.

### Usage

Use this command to retrieve a list of redirected domain names in this domain name account. This list is categorized with TRAFFIC commands because a primary reason for compiling it is to determine the path by which users are reaching your Web site.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/traffic/trafficmanager.asp>

The links in the **Redirector names** column call the **TRAFFIC\_GetRedirectedDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The Traffic Vista account must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TrafficLoginID</b>	Required	Traffic Vista account login ID	16
<b>StartDomain</b>	Optional	First character of the domain name. Permitted values are <b>0</b> through <b>9</b> and <b>A</b> through <b>Z</b> .	1

Param name	Obligation	Definition	Max size
<b>PrevNext</b>	Optional	Number of the domain to start this page. For example, <b>PrevNext=51</b> displays a list that starts with the fifty-first name in a list.	8
<b>Sort</b>	Optional	Sort criterion for the domain list. Permitted values are: <b>alpha</b> List domains in numero-alphabetic order <b>on</b> List begins with redirected names that are being monitored by Traffic Vista <b>off</b> List begins with redirected names that are not being monitored by Traffic Vista	4
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Count</b>	The position of this domain on this page of results
<b>DomainNameID</b>	Domain name ID number, from our database
<b>SLD</b>	Second-level domain name (for example, enom in enom.com)
<b>TLD</b>	Top-level domain name (extension)
<b>Enabled</b>	Traffic Vista enabled status
<b>ResultsCount</b>	Number of domains on this page of results
<b>NewStartPosition</b>	In the complete list generated by this query, the position of the domain that will top the list if the user clicks the Next button
<b>OldStartPosition</b>	In the complete list generated by this query, the position of the domain that is designated as domain 1.
<b>RedirectedDomainCount</b>	Total number of redirected domains in this domain name account
<b>TrafficLoginID</b>	The name of this Traffic Vista account
<b>Sort</b>	The sort criterion for this page of results
<b>StartDomain</b>	In the complete list generated by this query, the number of the first domain displayed on this page of results
<b>ShowPrevious</b>	Show a link to the previous page of domains retrieved by this query? (This helper output reflects the fact that the command keeps track of the number of return values and which values should be displayed on each page.)
<b>ShowNext</b>	Show a link to the next page of domains retrieved by this query? (This helper output reflects the fact that the command keeps track of the number of return values and which values should be displayed on each page.)
<b>PageStart</b>	In the complete list generated by this query, the start number of the domains displayed on this page of results
<b>PageEnd</b>	In the complete list generated by this query, the ending number of the domains displayed on this page of results
<b>Tracked</b>	Number of redirected names currently monitored in Traffic Vista
<b>InRedirector</b>	Total number of redirected names in this domain name account
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query retrieves redirected names that begin with **F**, starting with the name **4** in the list, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_GETREDIRECTEDDOMAINS&
uid=resellid&pw=resellpw&TrafficLoginID=traffictest&Startdomain=F&PrevNext=4&
ResponseType=xml
```

In the response, a list of redirected domains and an **ErrCount** value **0** indicate that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <redirectedddomains>
    <domaindetails count="1" domainnameid="152558884"
      sld="domainname120704c" tld="biz" enabled="False" />
    <domaindetails count="2" domainnameid="152558883"
      sld="domainname120704c" tld="org" enabled="False" />
    <domaindetails count="3" domainnameid="152558887"
      sld="domainname120704d" tld="org" enabled="False" />
    .
    .
    .
    <domaindetails count="40" domainnameid="152559103"
      sld="domainname121004" tld="biz" enabled="False" />
    <domaindetails count="41" domainnameid="152559106"
      sld="domainname121004b" tld="org" enabled="False" />
    <domaindetails count="42" domainnameid="152559101"
      sld="domainname121004" tld="org" enabled="False" />
  </redirectedddomains>
  <ResultsCount>42</ResultsCount>
  <NewStartPosition>4</NewStartPosition>
  <OldStartPosition>1</OldStartPosition>
  <RedirectedDomainCount>45</RedirectedDomainCount>
  <trafficloginid>traffictest</trafficloginid>
  <sort>alpha</sort>
  <startdomain>f</startdomain>
  <showprevious>true</showprevious>
  <shownext>false</shownext>
  <pagestart>4</pagestart>
  <pageend>45</pageend>
  <trafficedirectorsum>
    <tracked>3</tracked>
    <inredirector>77</inredirector>
  </trafficedirectorsum>
  <Command>TRAFFIC_GETREDIRECTEDDOMAINS</Command>
```

```
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>

# TRAFFIC\_SetAllRedirectedDomains

---

## Description

### Definition

Add all redirected domains in a domain name account to the list of domains monitored by a Traffic Vista account.

### Usage

Use this command to add all redirected domains in a domain name account to the list of domains monitored by a Traffic Vista account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/traffic/trafficmanager.asp>

Click a link in the **Redirector names** column.

When the **Select all my redirected domains** check box is checked, clicking the **save changes** button calls the **TRAFFIC\_SetAllRedirectedDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The Traffic Vista account must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TrafficLoginID</b>	Required	Traffic Vista account name	14
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Success</b>	Success status of this query
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query adds all redirected domains in the domain name account to the Traffic Vista monitoring list, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_SetAllRedirectedDomains&uid=resellid&pw=resellpw&trafficloginid=TrafficTest&ResponseType=xml
```

In the response, the **Success** value **1** confirms that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <success>1</success>
  <Command>TRAFFIC_SETALLREDIRECTEDDOMAINS</Command>
  <Language>en</Language>
  <ErrCount>0</ErrCount>
  <ResponseCount>0</ResponseCount>
  <MinPeriod />
  <MaxPeriod>10</MaxPeriod>
  <Server>LOCALHOST</Server>
  <Site>enom</Site>
  <IsLockable />
  <IsRealTimeTLD />
  <TimeDifference>+0.00</TimeDifference>
  <ExecTime>0.15625</ExecTime>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# TRAFFIC\_SetRedirectedDomains

---

## Description

### Definition

Specify whether each redirected name in an account should be monitored in a Traffic Vista account.

### Usage

Use this command to specify whether each redirected domain should be monitored in a Traffic Vista account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/traffic/trafficmanager.asp>

Click a link in the **Redirector names** column.

When the **Select all my redirected domains** check box is cleared, the **save changes** button calls the **TRAFFIC\_SetRedirectedDomains** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The Traffic Vista account must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DomainCount</b>	Required	Number of domains in this query. This value must match the number of <b>RedirDomainX</b> - <b>SetRedirDomainX</b> pairs in this query.	3

Param name	Obligation	Definition	Max size
<b>RedirDomainX</b>	<b>Required</b>	Domain name ID number, our database tracking number, for domain X. You can retrieve this ID number using the <a href="#">TRAFFIC_GetRedirectedDomains</a> command.	10
<b>SetRedirDomainX</b>	<b>Required</b>	Desired Traffic Vista setting for this domain name. Permitted values are: <b>on</b> Track this domain in this Traffic Vista account <b>off</b> Do not track this domain	3
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets the Traffic Vista tracking for five domains, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_SETREDIRECTEDDOMAINS&
uid=resellid&pw=resellpw&trafficloginid=TrafficTest&domaincount=5&
redirdomain1=318173489&setredirdomain1=on&redirdomain2=318212915&setredirdomain2=off&
redirdomain3=318171031&setredirdomain3=on&redirdomain4=318265074&setredirdomain4=off&
redirdomain5=318264347&setredirdomain5=on&ResponseType=xml
```

In the response, an **ErrCount** value **0** confirms taht the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
<Command>TRAFFIC_SETREDIRECTEDDOMAINS</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod />
<MaxPeriod>10</MaxPeriod>
<Server>LOCALHOST</Server>
<Site>enom</Site>
<IsLockable />
<IsRealTimeTLD />
<TimeDifference>+0.00</TimeDifference>
```

```
<ExecTime>0.40625</ExecTime>
<Done>true</Done>
<debug>
<![CDATA[  ]]>
</debug>
</interface-response>
```

# TRAFFIC\_UpdateAccountDetails

## Description

### Definition

Update the settings for a Traffic Vista account.

### Usage

Use this command to change the settings for a Traffic Vista account.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://enomson/traffic/trafficmanager.asp>

Each **save changes** button calls the **TRAFFIC\_UpdateAccountDetails** command with a different value of the **Action** parameter.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The Traffic Vista account must belong to this domain name account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>TrafficLoginID</b>	Required	Account name for this Traffic Vista account	16
<b>Action</b>	Required	Permitted values are: <b>GetQuote</b> retrieve the price <b>UpgradePref</b> change the upgrade setting <b>OverageOption</b> change the overage setting <b>UpdatePassword</b> change the password <b>CancelAccount</b> cancel this account	11
<b>UpgradePrefOpt</b>	Required if <b>Action=UpgradePref</b>	Permitted values are: <b>1</b> Auto upgrade if I went over last month <b>2</b> Manual upgrade and downgrade	1

Param name	Obligation	Definition	Max size
<b>QuoteMultiplier</b>	<b>Required</b> if <b>Action=UpgradePref</b>	Number of units the user requested—multiply the return value from <a href="#">PE_GetRetailPrice</a> by this number	4
<b>OverageOptions</b>	<b>Required</b> if <b>Action=OverageOption</b>	Overage option setting. Permitted values are: <b>1</b> Charge overage fee per 50K page views <b>2</b> Disable until next billing cycle	4
<b>NewPassword</b>	<b>Required</b> if <b>Action=UpdatePassword</b>	Overage option setting. Permitted values are: <b>1</b> Charge overage fee per 50K page views <b>2</b> Disable until next billing cycle	4
<b>ConfirmNewPassword</b>	<b>Required</b> if <b>Action=UpdatePassword</b>	Overage option setting. Permitted values are: <b>1</b> Charge overage fee per 50K page views <b>2</b> Disable until next billing cycle	4
<b>Terminate</b>	<b>Required</b> if <b>Action=CancelAccount</b>	Cancel setting. Permitted values are: <b>0</b> Do not cancel at end of this billing cycle <b>1</b> Cancel at end of this billing cycle	4
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Message</b>	Success message for this update
<b>QuoteMultiplier</b>	Number of units included in this quote
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query Increases the number of page views for this Traffic Vista account, and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=TRAFFIC_UPDATEACCOUNTDETAILS&
uid=resellid&pw=resellpw&trafficloginid=test04&Action=upgradepref&
upgradeprefopt=2&quotemultiplier=2&ResponseType=xml
```

In the response, a success message confirms that your query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <trafficmsg>
```

```
<msg>Your update was successful</msg>
</trafficmsg>
<trafficquotemultiplier>
  <quotemultiplier>2</quotemultiplier>
</trafficquotemultiplier>
<Command>TRAFFIC_UPDATEACCOUNTDETAILS</Command>
<Language>en</Language>
<ErrCount>0</ErrCount>
<ResponseCount>0</ResponseCount>
<MinPeriod />
<MaxPeriod>10</MaxPeriod>
<Server>LOCALHOST</Server>
<Site>enom</Site>
<IsLockable />
<IsRealTimeTLD />
<TimeDifference>+0.00</TimeDifference>
<ExecTime>0.1875</ExecTime>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

---

# UpdateAccountInfo

---

## Description

### Definition

Update a variety of account information.

### Usage

Use this command to update Billing contact information.

For reseller accounts, use this command to change the password or authorization question for a retail subaccount.

For retail accounts, use this command to update credit card information.

You cannot use this command to update credit card information for a reseller account.

To add funds to a reseller account, use the [RefillAccount](#) command.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<https://www.enom.com/myaccount/EditContact.asp?>

On the **my info** page, the **save changes** button calls the **UpdateAccountInfo** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The account identified in the **UID** parameter must be a reseller account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>NewUID</b>	Required for changing the password of this account	Account login ID	20
<b>NewPW</b>	Required	Desired password for this account for the future	20

Param name	Obligation	Definition	Max size
<b>ConfirmNewPW</b>	Required	Confirm desired password for this account for the future	20
<b>AuthQuestionType</b>	Required	Type of question. Permitted values: <b>smaiden</b> mother's maiden name <b>sbirth</b> city of birth <b>ssocial</b> last 4 digits of SSN <b>shigh</b> high school	10
<b>AuthQuestionAnswer</b>	Required	The answer to the question type (mother's maiden name, city of birth, last 4 digits of social security or high school)	50
<b>Reseller</b>	Required if you are using the command to update credit card information for a retail account	Set <b>Reseller=0</b> to update credit card information for a retail account.	1
<b>Account</b>	Optional	Account ID of the account to be updated	11
<b>RegistrantOrganizationName</b>	Required for us to apply the Web site URL	Registrant organization	60
<b>WebSiteURL</b>	Optional overall, but Required if we bill your customers for domain renewals and other services	URL of the domain registration Web site, for billing purposes	150
<b>RegistrantFirstName</b>	Required	Registrant first name	60
<b>RegistrantLastName</b>	Required	Registrant last name	60
<b>RegistrantJobTitle</b>	Required if <b>RegistrantOrganizationName</b> is supplied	Registrant job title	60
<b>RegistrantAddress1</b>	Required	Registrant Address	60
<b>RegistrantAddress2</b>	Optional	Registrant additional address info	60
<b>RegistrantCity</b>	Required	Registrant city	60
<b>RegistrantStateProvinceChoice</b>	Optional	Registrant state or province choice: <b>S</b> state <b>P</b> province	1
<b>RegistrantStateProvince</b>	Optional	Registrant state or province	60
<b>RegistrantPostalCode</b>	Optional	Registrant postal code	16
<b>RegistrantCountry</b>	Optional	Registrant country	60
<b>RegistrantEmailAddress</b>	Required	Email address for WhoIs	128
<b>RegistrantEmailAddress_Contact</b>	Optional	Email address for us to contact to you about your domain name account	128
<b>RegistrantPhone</b>	Required	Registrant phone. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17

Param name	Obligation	Definition	Max size
<b>RegistrantFax</b>	<b>Required</b> if RegistrantOrganizationName is supplied	Registrant fax number. Required format is <b>+CountryCode.PhoneNumber</b> , where <i>CountryCode</i> and <i>PhoneNumber</i> use only numeric characters.	17
<b>CardType</b>	<b>Required</b> if updating credit card information of a retail account	Type of credit card	20
<b>CCName</b>	<b>Required</b> if updating credit card information of a retail account	Cardholder's name	60
<b>CreditCardNumber</b>	<b>Required</b> if updating credit card information of a retail account	Customer's credit card number	128
<b>CreditCardExpMonth</b>	<b>Required</b> if updating credit card information of a retail account	Credit card expiration month	2
<b>CreditCardExpYear</b>	<b>Required</b> if updating credit card information of a retail account	Credit card expiration year	4
<b>CVV2</b>	<b>Required</b> if updating credit card information of a retail account	Credit card verification code	4
<b>CCAddress</b>	<b>Required</b> if updating credit card information of a retail account	Credit card billing address	60
<b>CCZip</b>	<b>Required</b> if updating credit card information of a retail account	Credit card billing postal code	15
<b>CCCountry</b>	<b>Required</b> if updating credit card information of a retail account	Credit card billing country	60

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.
- This command updates credit card information only if this is a retail account.

## Example

The following query updates account information: password, authorization question, or contact information. The query requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=UpdateAccountInfo&
uid=resellid&pw=resellpw&NewUID=resellid2&
NewPW=resellpw2&ConfirmNewPW=resellpw2&
AuthQuestionType=smaiden&AuthQuestionAnswer=Jones&RegistrantAddress1=111+Main+St.&
RegistrantCity=Hometown&RegistrantCountry=United+States&
RegistrantEmailAddress=john.doe@resellerdocs.com&RegistrantFax=+1.5555555556&
RegistrantFirstName=John&RegistrantLastName=Doe&RegistrantJobTitle=President&
RegistrantOrganizationName=Reseller+Documents+Inc.&RegistrantPhone=+1.5555555555&
RegistrantPostalCode=99999&RegistrantStateProvince=WA&RegistrantStateProvinceChoice=S&
RegistrantNexus=United+States&RegistrantPurpose=&responsetype=xml
```

The response confirms the **Successful** update of account information:

```
<?xml version="1.0" ?>
<interface-response>
  <StatusEditContact>Successful</StatusEditContact>
  <OrganizationName>Reseller Documents Inc.</OrganizationName>
  <JobTitle>President</JobTitle>
  <Fname>John</Fname>

# UpdateAccountPricing

## Description

### Definition

Set wholesale prices for a subaccount.

### Usage

Use this command to set the wholesale prices that one subaccount pays you for each product.

To set retail prices for consumers who buy directly from this account, use [PE\\_SetPricing](#).

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/resellers/subaccount-list.asp>

Click any subaccount's LoginID to see the wholesale prices you charge them; the values can be reset with **UpdateAccountPricing**.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.
- The subaccount named with **LoginID** or **Account** parameters must be a subaccount of the account named in the **uid** and **pw** parameters.

## Input parameters

Build the query string using this syntax:

**<http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue>**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>LoginID</b>	Either <b>LoginID</b> or <b>Account</b> is Required	Subaccount login ID (use <a href="#">GetAccountInfo</a> to retrieve the subaccount login ID)	20
<b>Account</b>	Either <b>LoginID</b> or <b>Account</b> is Required	Subaccount ID number (use <a href="#">GetAccountInfo</a> to retrieve the subaccount ID number; format is <i>NNN-aa-NNNN</i> )	11

Param name	Obligation	Definition	Max size
<b>AcctType</b>	<b>Required</b>	Type of subaccount that you want this subaccount to be recorded as, after this query executes. Permitted values are <b>reseller</b> and <b>retail</b> . Note that once an account is converted to reseller status, it cannot be changed back to retail status.	8
<b>OrigType</b>	<b>Required</b> if you are converting this subaccount to reseller with this query	If you want to convert a retail account to reseller when this query executes, include <b>OrigType=retail</b> in the query string.	8
<b>TLDprice</b>	Optional	Price for registering a domain name, in <i>DD.cc</i> format. For example, <b>comprice=24.95</b> sets the price of registering a .com name to \$24.95.	1000.00
<b>TLDrenew</b>	Optional	Price for renewing a domain name, in <i>DD.cc</i> format	1000.00
<b>TLDtransfer</b>	Optional	Price for transferring a domain name and extending its expiration date by one year, in <i>DD.cc</i> format	1000.00
<b>DNSHosting</b>	Optional	Price for one year of DNS hosting, in <i>DD.cc</i> format	1000.00
<b>pop3</b>	Optional	Price for a 10-pak of POP3 mailboxes, in <i>DD.cc</i> format	1000.00
<b>dotnamebundle</b>	Optional	Price of a .name domain plus email service from the .name Registry, in <i>DD.cc</i> format	1000.00
<b>45_valueadd</b>	Optional	Price of email forwarding, in <i>DD.cc</i> format	1000.00
<b>47_valueadd</b>	Optional	Price of URL forwarding, in <i>DD.cc</i> format	1000.00
<b>WPPS</b>	Optional	Price for one year of Whois Privacy Protection Service, in <i>DD.cc</i> format	1000.00
<b>Certificate-GeoTrust-QuickSSL</b>	Optional	Price for a one-year GeoTrust QuickSSL certificate, in <i>DD.cc</i> format	1000.00
<b>Certificate-GeoTrust-QuickSSL-Premium</b>	Optional	Price for a one-year GeoTrust QuickSSL Premium certificate, in <i>DD.cc</i> format	1000.00
<b>Certificate-GeoTrust-TrueBizID</b>	Optional	Price for a one-year GeoTrust True BusinessID certificate, in <i>DD.cc</i> format	1000.00
<b>Certificate-GeoTrust-TrueBizID-Wildcard</b>	Optional	Price for a one-year GeoTrust True BusinessID Wildcard certificate, in <i>DD.cc</i> format	1000.00

Param name	Obligation	Definition	Max size
<b>TrafficVista</b>	Optional	Price for one year of traffic data, in <i>DD.cc</i> format	1000.00
<b>WebMonitor</b>	Optional	Price for monitoring Web site down-time, in <i>DD.cc</i> format	1000.00
<b>WSCBasic</b>	Optional	Price for WebSite Creator Basic package, in <i>DD.cc</i> format	1000.00
<b>WSCFull</b>	Optional	Price for WebSite Creator Full package, in <i>DD.cc</i> format	1000.00
<b>WSCEcommerce</b>	Optional	Price for WebSite Creator eCommerce package, in <i>DD.cc</i> format	1000.00
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Account</b>	Subaccount ID
<b>AccountType</b>	Subaccount type
<b>Count</b>	Number of TLD prices modified
<b>Status</b>	Success status for this query
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query converts subaccount **154-dz-5567** from **retail** to **reseller**, and sets prices for several products. It requests the response in XML format:

```
http://resellertest.enom.com/interface.asp?uid=resellid&pw=resellpw&Account=154-dz-5567&AcctType=reseller&OrigType=retail&command=UPDATEACCOUNTPRICING&comprice=14&comrenew=15&comtransfer=16&pop3=29.95&dotnamebundle=20.95&responsetype=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <Set>
    <Account>154-dz-5567</Account>
```

```
<AcctType>reseller</AcctType>
<Count>3</Count>
<Status>Successful</Status>
</Set>
<Command>UPDATEACCOUNTPRICING</Command>
<ErrCount>0</ErrCount>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>True</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<Done>true</Done>
<debug>
  <![CDATA[ ]]>
</debug>
</interface-response>
```

# UpdateCart

## Description

### Definition

Update items in the shopping cart.

### Usage

Use this command to activate or deactivate a shopping cart item or to change its quantity.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/Cart.asp>

On the **cart** page, changing an item from **OldItemStatus=A** (active) to **ItemStatus=I** (inactive) clears the check box in the **select** column.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The item must be in the customer's shopping cart.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>ItemIDX</b> (X=1 to <i>NumberOfItems</i> )	Required	Input value is the six-digit cart item ID. Retrieve this number using the <a href="#">GetCartContent</a> command.	10
<b>ItemStatusX</b>	Optional	New status of the item. Permitted values are <b>on</b> to make the status active, <b>off</b> to make it inactive. Items set to status <b>on</b> are subject to the next operation you perform on the cart.	3
<b>ItemQtyX</b>	Required	New quantity for the item	4
<b>RenewX</b>	Optional	Renewal setting for the item. Permitted values are <b>on</b> to auto-renew, <b>none</b> for an item that is not renewable. If <b>RenewX</b> is not supplied, item is set to not auto-renew.	4

Param name	Obligation	Definition	Max size
<b>ClearItems</b>	Optional	Toggle all items in cart to status <b>I</b> (Inactive). Permitted value is <b>Yes</b> .	3
<b>ActivateItems</b>	Optional	Toggle all items in cart to status <b>A</b> (Active). Permitted value is <b>Yes</b> .	3
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that item **365690** be moved from active (**A**) to inactive (**I**) status, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=updatecart&
uid=resellid&pw=resellpw&
ItemID1=365690&ItemStatus1=on&ItemQty1=1&Renew1=1&ResponseType=xml
```

The response is as follows:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>UPDATECART</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# UpdateCusPreferences

## Description

### Definition

Update the customer preference settings for an account.

### Usage

Use this command to update customer preference settings.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/myaccount/Settings.asp>

On the **my enom > settings** page, the **UpdateCusPreferences** command sets any changes that a user enters in the **Default Domain Options** section.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DefPeriod</b>	Required	Default period for auto-renew and registrar lock settings, in years. A domain's registration period cannot extend more than 10 years beyond today.	2
<b>RegLock</b>	Optional	<b>RegLock=on</b> prevents a domain from being transferred to a new registrar. <b>RegLock=off</b> allows unrestricted transfer of a domain from one registrar to another. Default is <b>on</b> .	3
<b>AutoRenew</b>	Optional	<b>AutoRenew=on</b> renews domain names automatically. <b>AutoRenew=off</b> does not renew domain names automatically. Default is <b>off</b> .	3

Param name	Obligation	Definition	Max size
<b>AutoPakRenew</b>	Optional	<b>AutoPakRenew=on</b> renews POP email paks automatically. <b>AutoPakRenew=off</b> does not renew POP paks automatically. Default is <b>off</b> . <i>Note:</i> This parameter displays in the UI only if auto-renewal of POP paks is enabled as a for-pay feature for this account.	3
<b>EEmailForwardRenew</b>	Optional	<b>EEmailForwardRenew=on</b> renews email forwarding automatically. <b>EEmailForwardRenew=off</b> does not renew email forwarding automatically. Default is <b>off</b> . <i>Note:</i> This parameter displays in the UI only if email forwarding is enabled as a for-pay feature for this account.	3
<b>URLForwardingRenew</b>	Optional	<b>URLForwardingRenew=on</b> renews URL forwarding automatically. <b>URLForwardingRenew=off</b> does not renew URL forwarding automatically. Default is <b>off</b> .	3
<b>AllowDNS</b>	Optional	Allow domain name servers. Options are <b>0</b> and <b>1</b> . Default is <b>1</b> .	1
<b>UseDNS</b>	Optional	Which name servers a domain is using. If <b>UseDNS=1</b> , use our name servers. If <b>UseDNS=0</b> , use the name servers specified in this query string. Default is <b>0</b> . <i>Note:</i> If <b>UseDNS</b> or <b>DNSX</b> are present in the <b>UpdateCusPreferences</b> query string, none of the other settings ( <b>DefPeriod</b> through <b>AllowDNS</b> ) will be updated.	1
<b>DNSY</b> Y= <b>1, 2, 3, . . .</b>	Optional	Use name of domain name server. For example, <b>DNS1=ns1.name-services.com</b> . <i>Note:</i> If <b>UseDNS</b> or <b>DNSY</b> are present in the <b>UpdateCusPreferences</b> query string, none of the other DNS settings ( <b>DefPeriod</b> through <b>AllowDNS</b> ) will be updated.	16
<b>UseParentDefault</b>	Optional	Use the same host records as this account's parent account? Permitted values are: <b>0</b> Do not use parent account's defaults <b>1</b> Use parent account's defaults	1
<b>RecordTypeX</b> X= <b>1, 2, 3, . . .</b>	Optional	Record type of host record X. Permitted values are: <b>A</b> Address <b>MXE</b> Mail Easy (email forwarding) <b>MX</b> Mail. Can be a host name under this domain name or the name of a mail server <b>CNAME</b> Alias record type, to associate a host name with another host <b>URL</b> URL redirect <b>FRAME</b> Frame redirect <b>TXT</b> Text record	5

Param name	Obligation	Definition	Max size
<b>AddressX</b>	Optional	Address to redirect to. If <b>RecordTypeX=A</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MXE</b> , <b>AddressX</b> must be an IP address If <b>RecordTypeX=MX</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=CNAME</b> , <b>AddressX</b> must be a fully qualified domain name (see Note) or a host name defined in this domain If <b>RecordTypeX=URL</b> , <b>AddressX</b> must be the exact URL of the page you redirect to, or an IP address, or a fully qualified domain name (see Note) If <b>RecordTypeX=FRAME</b> , <b>AddressX</b> is the actual URL, or the IP address, or the fully qualified domain name (see Note) of the page you want to display when someone types <i>Your_Domain.com</i> If <b>RecordTypeX=TXT</b> , <b>AddressX</b> is a text record. For help writing an SPF record, you can go to <a href="http://spf.pobox.com/wizard.html">http://spf.pobox.com/wizard.html</a>	260
<b>HostNameX</b>	Optional	Name of host record X, for example, <b>HostName1=www</b>	60
<b>ShowPopUps</b>	Optional	Show menus. <b>ShowPopUps=0</b> hides menus; <b>ShowPopUps=1</b> shows menus. Default is <b>1</b> .	1

## Returned parameters and values

Param name	Definition
<b>Update</b>	A return value of <b>Successful</b> indicates that customer preferences were successfully updated.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the updating of several customer preference settings, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=UPDATECUSPREFERENCES&uid=resellid&pw=resellpw&DefPeriod=4&AutoRenew=on&
```

AutoPakRenew=on&RegLock=on&URLForwardingRenew=on&  
EmailForwardRenew=on&AllowDNS=0&ShowPopups=0&responsetype=xml

In the response, the **ErrCount** value **0** indicates that the update was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <Command>UPDATECUSPREFERENCES</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <IsLockable>0</IsLockable>
  <IsRealTimeTLD>0</IsRealTimeTLD>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]]>
  </debug>
</interface-response>
```

# UpdateExpiredDomains

---

## Description

### Definition

Reactivate an expired domain in real time.

### Usage

Use this command to reactivate a domain after it has expired, while it is in Expired status. This command reactivates a domain in real time.

Before a domain expires, use the [Extend](#) command to renew it. We recommend renewing at least a week before a domain expires.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/DomainManager.asp?tab=expireddomains>

On the **my domains** page, **my domains** tab, **expired** subtab, clicking on the name of an expired domain calls the **UpdateExpiredDomains** command.

## Constraints

The query must meet the following requirements:

- The domain must be in Expired status. The registrar sets the duration of the grace period between expiration and deletion from the registrar's database. To retrieve a list of expired domains, use the [GetDomains](#) command with parameter **Tab=ExpiredDomains**.
- Customer must have sufficient funds. The charge for reactivation is the same as a one-year renewal.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>DomainName</b>	Required	Domain Name (for example, <b>thisdomain.com</b> )	65

## Returned parameters and values

Param name	Definition
<b>Status</b>	Reactivation status.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests the reactivation of expired domain **resellerdocs.com**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=UpdateExpiredDomains&
uid=resellid&pw=resellpw&DomainName=resellerdocs.com&responsetype=xml
```

In the response, the **Status** value indicates a successful reactivation:

```
<?xml version="1.0" ?>
<interface-response>
  <ReactivateDomainName>
    <Status>REACTIVATION PROCESSED SUCCESSFULLY! The orderid is 156514444.</Status>
  </ReactivateDomainName>
  <Command>UPDATEEXPIREDDOMAINS</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[ ]]>
  </debug>
</interface-response>
```

# UpdateMetaTag

---

## Description

### Definition

Add or update the HTML metatags for one of a domain's host records.

### Usage

Use this command to raise the probability that a search engine will find this domain.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to resellertest.enom.com with login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/metatags.asp?HostID=11415002&DomainNameID=152533676>

On the **meta tags** page, the **save changes** button calls the **UpdateMetaTag** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>MetaTagHostID</b>	Required	Metatag host ID, our internal tracking number. You can retrieve host IDs using the <a href="#">GetRegHosts</a> command.	8
<b>TitleBar</b>	Recommended	Content to display in the browser title bar. Replace spaces with +.	100

Param name	Obligation	Definition	Max size
<b>SiteDescription</b>	Recommended	Content to display in search engine results. Replace spaces with +.	250
<b>Keywords</b>	Recommended	List of keywords for search engines. Separate keywords with +.	250
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>TitleBar</b>	New title to display in browser title bar
<b>SiteDescription</b>	New description to display in search engine results
<b>Keywords</b>	New search-engine keywords for this host ID
<b>DomainNameID</b>	9-digit domain name ID, our internal tracking number
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query sets values for the metatags, and sends the response in XML format:

```
http://resellertest.enom.com/interface.asp?command=UpdateMetaTag&
uid=resellid&pw=resellpw&sld=resellerdocs&tld=com&
MetaTagHostID=11415002&TitleBar=MY+COOL+TITLE&
SiteDescription=MY+SITE+DESCRIPTION&Keywords=MY+SITE+KEYWORDS&ResponseType=XML
```

In the response, metatag values that match your desired content, and an **ErrCount** value **0**, confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <DomainRRP>E</DomainRRP>
  <RegistrarHold>False</RegistrarHold>
  <metatags>
    <titlebar>MY COOL TITLE</titlebar>
    <sitedescription>MY SITE DESCRIPTION</sitedescription>
    <keywords>MY SITE KEYWORDS</keywords>
    <DomainNameID>152533676</DomainNameID>
  </metatags>
  <Command>UPDATEMETATAG</Command>
```

```
<ErrCount>0</ErrCount>
<Server>RESELLERTEST</Server>
<Site>enom</Site>
<IsLockable>False</IsLockable>
<IsRealTimeTLD>True</IsRealTimeTLD>
<Done>true</Done>
<debug>
  <![CDATA[  ]]>
</debug>
</interface-response>
```

## Related commands

[SetHosts](#)

# UpdateNameServer

## Description

### Definition

Change the IP address of a name server in the Registry's records.

### Usage

Use this command when the IP address of a name server changes.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://www.enom.com/domains/RegNameServer.asp>

In the **Update a Name Server IP** section, clicking the **submit** button calls the **UpdateNameServer** command.

## Constraints

The query must meet the following requirements:

- The login ID and password must be valid.
- The domain name of the name server must belong to this account.
- eNom must be the authoritative registrar (in the Registry's records) for the root domain.
- The registrar lock for the name server domain must be set to **off** while you update name servers. Once the name server IP has been updated, you can (and we recommend that you do) switch the registrar lock back on.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>OldIP</b>	Required	Old IP address of the name server in the Registry's records	15
<b>NewIP</b>	Required	New IP address of the name server in the Registry's records	15
<b>NS</b>	Required	Use name of the name server, in the Registry's records	84
<b>ResponseType</b>	Optional	Format of response. Options are <b>Text</b> (default), <b>HTML</b> , or <b>XML</b> .	4

## Returned parameters and values

Param name	Definition
<b>NsSuccess</b>	<b>1</b> indicates that the name server IP update is successful
<b>RRPCode</b>	Registry processing status code
<b>RRPText</b>	Text explanation of registry code
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query changes the IP of name server **dns1.resellerdocs.com** and sends the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=updatenameserver&
uid=resellid&pw=resellpw&OldIP=127.0.0.1&NewIP=127.0.0.2&
NS=dns1.resellerdocs.com&responsetype=xml
```

In the response, the **NsSuccess** value **1** and **RRPText** value **Command completed successfully** confirm that the query was successful:

```
<?xml version="1.0" ?>
<interface-response>
  <RegisterNameserver>
    <NsSuccess>1</NsSuccess>
  </RegisterNameserver>
  <RRPCode>200</RRPCode>

# UpdatePushList

---

## Description

### Definition

Update a list of domains to push into another account.

### Usage

Use this command to push names from one eNom account to another.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

Log on to **resellertest.enom.com** with Login ID **resellid**, password **resellpw**.

<http://resellertest.enom.com/domains/Push.asp?DomainNameID=152533882>

**UpdatePushList** is not implemented on enom.com. However, the **submit** button on the **push a name** page calls **PushDomain**, a similar command.

## Constraints

The query must meet the following requirements:

- Both the origin and destination accounts must be in our system.
- The login ID and password must be valid.
- The domain name must belong to this account.

## Input parameters

Build the query string using this syntax:

**http://resellertest.enom.com/interface.asp?command=***nameofcommand***&**  
**uid=***yourloginid***&pw=***yourpassword***&paramname=***paramvalue***&nextparamname=***nextparamvalue*

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>PushToLoginID</b>	Required	LoginID of the account to push the names into	16
<b>DomainList</b>	Required	CRLF-delimited list of domain names (URLEncode value for CRLF is <b>%0D%0A</b> ).	4000

## Returned parameters and values

Param name	Definition
<b>SuccessfulPush</b>	<b>True</b> if successful or <b>False</b> otherwise
<b>Command</b>	Name of command executed

Param name	Definition
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query requests that **resellerdocs2.net** and **resellerdocs3.info** be pushed to account **olerud**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=UpdatePushList&
uid=resellid&pw=resellpw&PushToLoginID=olerud&
domainlist=resellerdocs2.net%0D%0Aresellerdocs3.info&responsetype=xml
```

In the response, the **SuccessfulPush** values of **Yes** indicate that each domain was pushed successfully:

```
<?xml version="1.0" ?>
<interface-response>
  <UPDATEPUSHLIST>
    <PUSH-DOMAIN>
      <DomainName>resellerdocs2.net</DomainName>
      <DomainListWrongFormat>Valid</DomainListWrongFormat>
      <DomainNameNotInYourAccount>Yes</DomainNameNotInYourAccount>
      <SuccessfulPush>Yes</SuccessfulPush>
    </PUSH-DOMAIN>
    <PUSH-DOMAIN>
      <DomainName>resellerdocs3.info</DomainName>
      <DomainListWrongFormat>Valid</DomainListWrongFormat>
      <DomainNameNotInYourAccount>Yes</DomainNameNotInYourAccount>
      <SuccessfulPush>Yes</SuccessfulPush>
    </PUSH-DOMAIN>
  </UPDATEPUSHLIST>
  <Command>UPDATEPUSHLIST</Command>
  <ErrCount>0</ErrCount>
  <Server>ResellerTest</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[  ]>
  </debug>
</interface-response>
```

# ValidatePassword

## Description

### Definition

Validate a password for a domain name.

### Usage

Use this command to determine whether the password for a domain name is valid.

### Availability

All resellers have access to this command.

### Implementation on eNom.com

<http://access.enom.com/>

On [access.enom.com](http://access.enom.com/), the **LOG-IN** button calls the **ValidatePassword** command.

## Constraints

The query must meet the following requirements:

- The domain name must exist.

## Input parameters

Build the query string using this syntax:

**`http://resellertest.enom.com/interface.asp?command=nameofcommand&uid=yourloginid&pw=yourpassword&paramname=paramvalue&nextparamname=nextparamvalue`**

Param name	Obligation	Definition	Max size
<b>UID</b>	Required	Account login ID	20
<b>PW</b>	Required	Account password	20
<b>SLD</b>	Required	Second-level domain name (for example, enom in enom.com)	63
<b>TLD</b>	Required	Top-level domain name (extension)	15
<b>DomainPassword</b>	Required	Password to access and manage the domain name.	60

## Returned parameters and values

Param name	Definition
<b>RegistrarHold</b>	The enabled status of a domain. If <b>RegistrarHold</b> is <b>True</b> , the domain is disabled.
<b>Command</b>	Name of command executed
<b>ErrCount</b>	The number of errors if any occurred. If greater than <b>0</b> check the <b>Err(1 to ErrCount)</b> values.

Param name	Definition
<b>Err(x)</b>	Error messages explaining the failure. These can be presented as is back to the client.
<b>Done</b>	<b>True</b> indicates this entire response has reached you successfully.

## Notes

- The default response format is plain text. To receive the response in HTML or XML format, send **ResponseType=HTML** or **ResponseType=XML** in your request.
- Check the return parameter **ErrCount**. If greater than 0 the transaction failed. The parameter **Err(ErrCount)** can be presented to the client. Otherwise process the returned parameters as defined above.

## Example

The following query asks whether **resellerdocs2pw** is the domain password for **resellerdocs2.net**, and requests the response in **XML** format:

```
http://resellertest.enom.com/interface.asp?command=validatepassword&
uid=resellid&pw=resellpw&
sld=resellerdocs2&tld=net&domainpassword=resellerdocs2pw&responsetype=xml
```

In the response, the error count of **0** confirms that **resellerdocs2pw** is the domain password for **resellerdocs2.net**:

```
<?xml version="1.0" ?>
<interface-response>
  <RegistrarHold>False</RegistrarHold>
  <Command>VALIDATEPASSWORD</Command>
  <ErrCount>0</ErrCount>
  <Server>Dev Workstation</Server>
  <Site>enom</Site>
  <Done>true</Done>
  <debug>
    <![CDATA[   ]>
  </debug>
</interface-response>
```
